rather than dumbing me down to your level. Remember that I
got on HF legally for the first time in Februry, 1953, running a
full kilowatt on a single-channel RTTY circuit across the Pacific.

I've been in the business of radio-electronics since 1951 and have
participated in theory-design-prototyping-testing-field trials on
more frequencies and more modulations than you can hope to
accomplish solely on "amateur bands." I have "worked DX" to a
range of a quarter million miles to a station ON the moon. I don't
care for spending countless hours working DX just for the sake
of working DX or mashing a telegraph key to pretend I'm a

"pioneer in radio" of the 1930s, recreating times that will never come about again. I see amateur radio as a hobby activity that is more than self-imagery and self-puffery and a constant recreation of old events using old procedures described by self-important boilerplate phrasing that is older than the average licensee.

Amateur radio might be a nice hobby to take up in retirement. Unfortunately, there are too many self-important self-styled "I'm in charge here" radio kops swaggering their sticks and waving their paper medals as if they were supermen Nobel laureates for what they did. Lawrence T. Roll comes across as one of those. That's not a role model for anyone.

Dennis, all that and what is snipped is good information on the state of the arts in fiberline communications. It wasn't my point to get into a large argument over what is or isn't the cutting edge of throughput at optical wavelengths. This is not the venue for that.

My hands-on experience with optical wavelengths is relatively limited to certain applications of optical interferometry, specifically phase measurement better than a nanometer. That includes

having to play on an optical bench alongside some physicists
(I dubbed optical benches as "stable tables" - heh).

If you wish to dub "slow" communications rates of 4 GBPS on-off
as "digital," I have no quarrel with that. To the average radio
amateur, such rates must appear in the fantasy region, the bit
rate being twice as fast as the highest carrier frequency ham
rig one can buy at HRO.

I was pointing out that on-off bit rates of 4,000,000,000 times per
second is what I consider "more digital" than 4 times per second
of a telegraph key closure used with an OOK CW transmitter.
A billion times faster, ten to the ninth power.

>I guess the original point might still be that we'd certainly call
>OOK CW a digital modulation when used in these systems, and it isn't
>clear to me that the nature of the modulation changes as you lower
>the bit rate to human speeds, so I think calling OOK CW in amateur
>radio "digital" is probably not incorrect.

Some folks called an old damped-wave arc-spark transmitter a
"radio" too. Very broadband thing, no problem to detect with a
galena crystal (with cat's whisker). Want to set one of those
alongside a modern Icom or Yaesu or Kenwood transceiver and
say both are "radios?" Both can do OOK CW. But they are
hardly similar, are they? :-)

The entire EM spectrum above 300 GHz is NOT REGULATED.

Nobody needs to get any license to operate above 300 GHz.

Optical frequencies are open for amateurs to really shine! :-)

Good words. I suspect that the amateur radio community thinking won't allow that or "failure." Failure is taken as a "weakness" and no self-important radio amateur wants to be "weak" or wimpish. Everything new must be laid out for them, already developed, plus explanatory articles on the new stuff printed in QST to make it "official" for amateur radio use. What will immediately follow are ready-made, designed-by-others equipment which the amateurs can buy, install, and then brag about their operating on the cutting edge of technology...without knowing much about it except for some important buzzphrases used to impress others. :-)

As an Electrical Engineer, I would like to see more technical activities in "Ham" radio clubs. I have been to a few clubs and it seems that most Hams are not interested in the technology of radio, they just want to operate it.

It is fine if you just want to operate a radio, do morse code, or contests. But, the professional would want to do other activities that they find iteresting. There are many "Ham" radio amateur clubs, but right now there are no clubs for the Amateur radio enthusiasts that want to work with rf technology.

I would like to see more antenna setups, kit building, discussions of ciruits people have designed, radio direction finding, etc. The ARRL handbook is full of good technical information, but most Ham radio people do not want to do these things. This is why professional stay away from Ham radio.

Right now, it is a waste to go join clubs, except for field day. Most clubs meet once a month and discuss Ham business. There is little opportunity to get involved. The only benefit to getting an Amateur radio licence is use of the spectrum.
I like working with rf and with radios. Probably, if my initial exposure was though a Ham radio club, I would not have
got exited about radios and would have forgot about it.

Even further proof that you two dupes don't bother to read, rather just spout off trash. Candid Carl was trying to assert that I knew nothing about AUTOMATIC transmission of messages. Of course he's as wrong as always.

Ah, No kidding??? Whatta revelation! Indeed, it was a simple string of a few
digipeaters stuck up by a few hams financed out of the pocket change. Sorry we

couldn't keep up with all the "Commercials".

Dennis- thanks for the insight, you have explained some things that needed explaining.
The only failure I found in packet radio on VHF (not HF) was the narowmindedness of certain operators in that they abused the system to the point that it was useless to everyone else. Carl seems to think that the answer was for the handful of hams involved to fund some AT&T version of packet radio that would have worked at Internet speeds. Looks to me like he's far out of touch with the reality of ham radio in real life. Few hams could or would be interested in any such venture. His "solutions" seem to be a pretty far stretch for a bunch of hobbyists, while completely normal for those well versed and working in such fields.

I couldn't agree more that the only real failure is to fail to attempt anything new at all.
Carl can't get it through his head that my beef with him is NOT in his promoting experimentation, but his and others insisting that every ham has to

emulate him or put him on a pedestal as the savior of ham radio. Never will happen and he isn't astute enough to understand that.
Only a small percentage of hams virtually all of whom work in the technology trades are equipped to do advanced digital experimentation, and most others follow trends and use the products of that experimentation *when those products prove to be attractive and useful within the ARS*. That hasn't changed in nearly a hundred years, and all the ranting Carl can do won't make it change now.

It really IS novel that Carl, the dashing digital guru, works basically only SSB on ham radio while I, the old CW hound, have found myself attracted to working and experimenting with a variety of digital modes. Looks like more "do as I say, not as I do" from him.

Dick

You really DON'T have a clue, do you? The VHF packet network was doing fine until the idiots decided to overwhelm it with continuous forwarding of junk mail. No rational ham radio system could survive that sort of assault. We finally just turned it off. But you would have upgraded it to a 56k circuit so as to give them even more capacity to forward junk mail. How so highly advanced of you!

Well, if you had multiple people with laptops creating files
of traffic "off line", and only one ham packet station, you
wouldn't have a typist directly driving the computer/TNC/
transmitter, but one of those laptops piping stored files
over the air..... Of course this would
have to be set up in practice sessions before hand, etc.

It's done on a phone line that has around 3KHz bandwidth,
about that of SSB. Of course HF is not the same as a
phone line, but give the experts the FCC permissions and time to
develop it, it is likely to be possible.

1200 baud if you're lucky.... Between retries, waiting for other users
and such, it becomes something like 150 baud. I used to post
to the packet BBS network small (up to 10K) files of short computer
programs and small highly compressed JPG image files. And that
was after cutting them up in pieces with "7plus" (IIRC). This was
back in '94 and my "home" BBS was W0RLI in the Portland area.
Even then, with some error correction in the packet protocol,
I still got a lot of error reports. If I knew the "map" of the packet
BBS distribution system, and analyzing the error reports (almost
always reporting the same error), I could probably identify the
broken BBS that was causing most all the errors. IIRC, I probably
could have used the headers of the error reports and figured it out
and then send a message to say "I suspect your BBS may have a
problem...". Didn't have time, etc....

People would complain about "recipe" packet posts. What's
wrong with those? It's non commercial and is "clean" speech,
nothing pornographic. AFAIK, the content is not restricted
to radio topics, or else people couldn't talk about the traffic or
their health issues either.

I was in that area about 20 years ago. Some company in or near
Reholoth Beach had me come to town for a job interview. Not
much there, small towns and lots of empty land like
farms and such. Cost of living should be fairly low, though...

I wouldn't think any of those small towns would have a bus
system of their own. Larry must be on a county-wide
system.

Man, if there ever was a textbook illustration of attributing your worst fears and insecurities onto someone or something else, we now have one.

Carl, most give up the image of the 'good guy' as one whose head goes dependably up and down, never disagrees, and won't even tell you your fly is open somewhere around the age of 15.

>radio that would have worked at Internet speeds.

Carl didn't describe any "AT&T version of packet radio." He merely
described the possibility of doing digital communications at speeds
higher than they are now...without increasing bandwidth.

> Looks to me like he's far out of
>touch with the reality of ham radio in real life.

Not to me. Dickie will have to define "reality of ham radio,"
other than what it means to Dickie.

>Few hams could or would be
>interested in any such venture. His "solutions" seem to be a pretty far
stretch
>for a bunch of hobbyists, while completely normal for those well versed and
>working in such fields.

Oh? Are the ham radio hobbyists so dumbed down that they
cannot comprehend higher digital rates without increasing
bandwidth? You must think that radio amateurs are very
dumbed down then.

Isn't it "normal" in the "ham radio reality" to have radio amateurs
buying all their digital radio equipment ready-made to just plug it
together and have it play?

> I couldn't agree more that the only real failure is to fail to attempt
>anything new at all.

Then why do you fail so much?

Begin with Shannon's Law of 1947 and its applicability to radio,
including amateur radio. Then go on to your outboard DSP
radio peripheral that you described as giving you so many
problems because you didn't set it up correctly. :-)

> Carl can't get it through his head that my beef with him is NOT in his
>promoting experimentation, but his and others insisting that every ham has to
>emulate him or put him on a pedestal as the savior of ham radio.

You must have been looking into a mirror when writing that.

Carl did NOT describe himself as "every ham had to emulate him"
or that all should put him on a "pedestal." :-)

Carl merely described, many times, the possibility that higher-
rate digitial signals could be sent in the same bandwidth as
conventional SSB voice of today. An accurate technical
description was depicted. Several others agreed with him on
that possibility.

On the other hand, Richard Carroll has consistently maintained
that all hams should know morse code...because Carroll is an
"old morse hound."

>Only a small percentage of hams virtually all of whom work in the technology
>trades are equipped to do advanced digital experimentation, and most others
>follow trends and use the products of that experimentation *when those
>products prove to be attractive and useful within the ARS*.

Define "advanced digital experimentation."

DSP for "brick wall" types of filtering can be done with a simple
PIC microcontroller from Microchip, capable of being programmed
with the filter software and containing built-in A/D converters.
There are several textbooks on the subject, one available over the
Internet (all chapters).

Compared to all-analog radio technology, the workbench setups
and equipment are FAR SIMPLER for digital experimentation
for bit rates as fast as the high end of HF. The cost is much less,
too.

>That hasn't changed in
>nearly a hundred years, and all the ranting Carl can do won't make it change
>now.

For "nearly a hundred years," US radio amateurs have been buying
ready-built equipment designed by others, using it, and then
bragging about how they are experts in radio for just using it. :-)

> It really IS novel that Carl, the dashing digital guru, works basically only
>SSB on ham radio while I, the old CW hound, have found myself attracted to
>working and experimenting with a variety of digital modes. Looks like more
>"do as I say, not as I do" from him.

Please describe the general nature of those "digital mode varieties."

Did you do that from scratch? Build a kit? By a plug-and-play
box? Could you understand what you were doing?

>off trash. Candid Carl was trying to assert that I knew nothing about
>AUTOMATIC transmission of messages. Of course he's as wrong as always.

Sorry, Carl is right. The "ASR" or "Automatic Send-Receive" built
into an ASR28 (Teletype Corporation model number) is selectable
for punching a paper tape, holding it for re-transmission until an
outgoing circuit is free for re-transmission. The "automatic" part is
primarily a convenience feature that can be duplicated manually
by anyone with a KSR28 with an outboard p-tape punch and
transmitting distributor. That's as "automatic" an operation as
handling mail envelopes beteen IN and OUT boxes. :-)

The Model 28s (and lower model numbers) from Teletype Corp.
were ALL electromagnetic, ready-built. If you wanted a store-
and-forward system you had to add electronics. The pre-28
models for chadless p-tape handling were the only TRUE
"automatics" with two tape readers, one taking over automatically
if the other finished reading a tape. I was around a couple
hundred such units for a few years in a REAL communications
station.

Please don't try any more snow jobs about teleprinter equipment
that is now obsolete.

Yes, a person couldn't go wrong listening to Dick or Hans. They've pretty
much got it all figured out. The rest of us have a lot to learn.

Brian

Your knowledge of automatic transmission of messages seems to be limited to ASR28's.
Nowadays, there are much better ways.

Message-ID: <3CCC87C2.E4150087@IEEE.org>
Source record: 41981

PACTOR III is here and runs on the existing SCS modems. It has a raw throughput
of 3600 baud which is high enough for digitized voice with a speech compression/
coding PC-based front end. PACTOR III is described at http://www.scs-ptc.com

Is a 2.2 kHz wide digital signal allowed on HF?

>develop it, it is likely to be possible.

If I've done the math right you need a minimal SN ratio of almost
60 db to get 56 kbps into 3 kHz. For comparison the very best
SN ratio you'll get on an analog telephone line is about 48 db
(because of the 8 bit D/A converter), so you'd need to be getting
better-than-telephone-line quality signals on HF to do this.
That might be a stretch.

I think the 56 kbps modems you get achieve this by cheating. They
run the A/D converter at the modem at double-speed, which effectively
allows them to make productive use of about 8 kHz of bandwidth on the
line in the downstream direction towards your house. As they can't do
this in the upstream direction, the data rates you get on that side of
the circuit are probably more representative of what you get with a
less-than-4 kHz bandwidth limit and telephone quality. I think they
run no faster than 33.6 kbps in that direction.

Yup. Also spare ducting is usually installed if new duct has to be put in. My
basic point is that it's not like the RF spectrum where reuse is an issue.

>> >> high reliability and security. Fiber is also almost immune to RFI,
>> >> EMI and EMP.

It is also somewhat more resistant to being tapped. During the Cold War, US
Navy submarines "tapped" Soviet undersea comm cables by means of pods placed
alongside the Soviet cables. The "taps" worked by induction. (See
"Blind Man's Bluff", now out in paperback, for lots more detail).

All depends what the customer wants and needs. A person who travels a lot
may actually save money by using a cell phone and a coast-to-coast one-rate
plan. In other cases, the cost of having more lines installed may exceed the
cost of a cellphone.

But most of the communications (in terms of circuit-miles) is fibre.

Of course - but those costs will drop over time. Glass is cheaper than copper.
There was a time when it was predicted by knowledgeable folks that cable TV
would flop in areas where good reception could be had with "rabbit ears".
Nobody thinks that way anymore!

New telecomm laws may make it more economic to run a single fibre rather than
multiple pairs for telephone service, coax for cable TV, etc.

You summed up my whole treatise in a sentence. Cool.

>You are, of course, aware
>that Sprint was Southern Pacific Railroad INTernal communications before
>bypassing the telco was legal.

oh yeah! The RRs were into COAM communications from the beginning. Most of them
now lease telecom circuits.

Much of the long-distance fibre infrastructure in the USA follows the
railroads, just as the telegraph did. The right of way was already there,
relatively easy to utilize, and companies like MCI could deal with a few RRs
instead of many municipalities and other utilities.

In some cases the RRs could offer the fibre folks facilities like spare ducts
in existing systems used for RR cables, or substantial aerial facilities. In
most cases, however, the new duct had to be buried, and the RRs produced a real
win-win solution in the form of the "on track plow".

The on track plow is a specially equipped work train capable of simultaneously
burying flexible duct, RR signal, power and comm cables, and warning tapes at
speeds up to about 200 feet per minute. Gondola cars that are part of the plow
train setup carry large reels of the cables and duct to be buried, simplifying

material supply issues. Production was usually measured in miles-per-day. The RRs could usually also lease or sell land for the repeater and terminal equipment houses as well as the ductwork right of way.

Off-track plow systems were also developed, based on bulldozers, for the places where the on-track plow system was impractical or not cost effective.

The fibre folks "win" was low cost construction and a complete right of way between many major cities. The RR's "win" was income from the leases. Many RRs also replaced pole lines with new cables as part of the plowing project, and often negotiated leaseback of fibre circuits for RR communications.

Yup. One can only wonder what would have evolved if the Bell system's effective monopoly had not been broken - or if it had been broken earlier.

>the others ...

What a waste! Wrong band for the job, and way too much power as well.
Bad practice, pure and simple.

No wonder they couldn't hear you - they probably couldn't have heard
you if you'd had the legal limit and 10dB of antenna.

>The other problem was the "quick keying" without an opportunity for
>anyone else to break in ... so the AGC might have had an effect as you

>> other's rigs off the desk.

The above means that I do not, in any way, condone what they were doing.
>
>Again, at least 2 of the stations can see each other's antennas ...

oh mama...

>so why use
>high power on 20m to talk across town when 2m simplex with a 5W HT
>would probalby work just fine and not block an HF frequency over huge

>areas of the earth???

Why use 20 at all when any VHF/UHF amateur band could do the job??

>To me, this is just bad practice (and probably a
>violation of the minimum power rule) ...

I count several bad practices:

- Wrong band for the distance covered
- Way too much power
- Failure to listen first and during use of the frequency
- Failure to ask about occupancy before starting the QSO

>but what do I know, since I'm
>an "Extra light" :-)

I thought it was spelled "lite" ;-)

>> >To make them even bigger lids, they were talking more or less
>> >"local" on 20m and obviously using very high power (bragging
>> >about their amps and big towers/beams) ...

Actually, that turns out to be a "good" thing, in a way. They unwittingly
confirmed
your suspicions about the use of too much power and the use of the wrong band.

The mere fact that somebody is 40 over isn't proof of excessive power. Their
conversation gave you the proof.

>> That's the biggest lidism, right there - use of the wrong band for the
>purpose.
>> What time of day was this?
>
>0030Z

So the band wasn't dead at their location, either. Just keeps getting worse.
(There may be some rationale to the use of a band like 20 for crosstown chats
if the band is dead, but that doesn't apply at all in this case.)
>
>I heard one of them again today on 14.205 calling the group ...

Only those of us who have lived through "unplanned" real emergencies seem to understand that planning is great and certainly a of significant benefit. But it can only take you so far.
It's like the old German or Soviet armies - when their leaders went down, the rank and file were essentially lost, having been drilled incessently to do and only do what their authorities ordered. They never learned to think and act for themselves.
You guys can be like that if you wish, but my training and experience allows me to think for myself when the going gets rough. It won't take a truckload of the latest technology to get me communicating.

"Each NOSS launch placed a cluster of one primary satellite
and three smaller sub-satellites (that trail along at distances
of several hundred kilometers) into low polar orbit. This satellite
array can determine the location of radio and radars
transmmitters, using triangulation, and the identity of naval
units, by analysis of the operating frequencies and transmission
patterns. NOSS used the ELINT (Electronic Intelligence) technique
called 'time difference of arrival,' TDOA, rather than true interferometry."

- Space Policy Agency: Military Space Programs about White Cloud NOSS

Wow... that didn't take long! And it was you that had come up with the first reponse! :)

Now, ya gotta change or it is gonna drive Larry and Dick and a few others nuts, since now there is a "dirty" equivalent of your callsign phonetics.

:)

Alrighty.... I have to ask the question..... Allegedly the ARRL supposedly is defending ham radio.... I would like to know how they are supposedly spending the money of it's members.

Who is getting the money... are Congresspersons.... or Senators being bribed? Obviously there is a certain about of their revenues that go to the manufacture of the magazine and the services around that, as they do sell ads also so the magazine is not a total drain on the budget. And obviously there is from what I see, people recieving salaries too.... I guess I will have to pursue a salary from our local radio club, it is non-profit too. (I spend at least 20 hours per week doing various work related to the club.)

If I can get the clear answers, which I do not have a right to being a non-ARRL member, but some of you are, as to where the money is going, I will send a money order out the next day I get the answers, for the membership.

Tell him to go to QRZ and do name searches on the authors of all those college textbooks that they use to teach 'professionals' about antenna theory, tower engineering, etc.

Better yet, tell him to look up Whit Griffith, N5SU, next time he's in Dallas. I'm sure anyone who hasn't taken the amateur title would be able to teach a 70+ year amateur like Whit a thing or two. Maybe even convince him to rewrite the book; http://www.arrl.org/catalog/retf/

I keep thinking of Randolph Scott and Western Union laying telegraph lines across the great treeless praries where you had to bring in everything on wagons as the Onion Pacific had not yet been invented. The work trains are slick, the wagon-schtick is monumental.

>the rules."

Other side of the same coin.

Fast forward a year or so. Let's say S25.5 is history in the wake of WRC-2003.
Should existing Techs get more HF/MF privileges
without taking more written tests? I think they should (something like half the
General privs, plus 200 W power limit). Many would say that's a freebie
upgrade.

Not from what I read in the FCC enforcement letters. Seems to be a pretty wide
distribution by license class and "time-in-grade". Of course the enforcement
letters are not necessarily an exact representation of all violations.

Still, the point is that the written tests, which directly address the rules of
how to act on the air, are not a perfect filter against violations. Does that
mean we don't need written tests? Of course not!

That's one possibility. Or it could be that as things fell apart the few
stations left on the air were using whatever was available.

They left it in transmit mode, too.
>
>I guess there really does have to be a willing

Much of it, anyway. Look at the hit movies for the past few years and see how
few of them are based on any sort of reality. Even when a film is based on
history, like "Titanic", it has to be jazzed up with a phony love story. Or, as
in the case of "A Beautiful Mind", the nasty rough edges of the real story are
glossed over to make the characters more likeable,

And had the ARRL asked that Novice and Tech+ be required to upgrade or lose their licenses, there would have been talk that the Leauge only did to so that the ARRL VEC would take in the examination $$$.

And if the ARRL had proposed that the existing licenses be retained (as was the FCC final decision) it would have been accused of trying to preserve an overly complicated licensing structure.

> Is a 2.2 kHz wide digital signal allowed on HF?

It is my understanding that such a signal would be allowed on the amateur HF voice subbands. It would not be allowed outside those subbands, even if used for data.

Under the proposal for the "experimental farm" reallocation of the Novice subbands, it could be used in those subbands for voice, data, etc., at any desired data rate as long as the entire signal was inside the subband.

If you are attempting to allude or imply that the FCC may
be using sophisticated techniques such as you describe here,
NO, not even close. The FCC does not even appear on the
screen, when national priorities are considered, especially when
you start talking about sophisticated intelligence systems. Perhaps
in the eyes of a few bureaucrats at the commission whose egos
have surpassed reality, but no, you're talking about an unimportant
agency whose biggest "project" operates out of two leaky trailers
in Laurel, MD, behind a 62 year old building in need of major
repairs.

Apples, Fruits, & assorted nuts.

But have you experienced anything more modern than that?

One wonders what the terrorists think of that convenience - they can take out
both railroads and communications infrastructure with the same destructive device.
Do it at multiple well planned locations and there goes Bill Sohl's "ring"
redundancy.
Of course such wouldn't be without precedent, either. It has been done before
during wartime, as earlier as the Civil war..

> their licenses, there would have been talk that the Leauge only did to so that
> the ARRL VEC would take in the examination $$$.

There would also be speculation that it was done to sell more study
guides, too. Of course ARRL has no monopoly on study guides or VE
sessions.
>
> And if the ARRL had proposed that the existing licenses be retained (as was the
> FCC final decision) it would have been accused of trying to preserve an overly
> complicated licensing structure.
>
Yep - complete with "pecking order", etc., yada, yada, yada.

One goal of the restructuring was the elimination of unnecessarily
complex regs, including license classes. The ARRL BoD plan did just
that. FCC didn't think keeping 3 of the 6 license classes unavailable
to newcomers was a problem.

Meanwhile, attrition, upgrading and reclassification of Tech Pluses
winnows the numbers of those classes down. If/when S25.5 disappears,
the difference between Tech and Tech Plus will disappear, too. (I
think perhaps FCC sees that as a given).

We're now over 100,000 Extras, too.

Pot calls kettle black ... Dick, you have some gall in calling ANYONE
"narrowminded."

How did these operators "abuse the system?" Your previous reference
was WRT message forwarding ... clearly a highly useful application.

> Carl seems to think that the answer
> was for the handful of hams involved to fund some AT&T version of packet
radio
> that would have worked at Internet speeds.

What I said was that the "system" stagnated at 1200 baud and didn't
have enough capacity to provide an acceptable level of service to
the large number of people who tried to use it ... that's just a fact and
is indisuptable, except perhaps in Dick's fantasy world.

> Looks to me like he's far out of
> touch with the reality of ham radio in real life. Few hams could or would
be
> interested in any such venture. His "solutions" seem to be a pretty far
stretch
> for a bunch of hobbyists, while completely normal for those well versed
and
> working in such fields.

The problem is that too many users of packet radio did not bother
to become sufficiently technically knowledgable to be able to comprehend
the nature of the problems, recognize that they could be simply and
relatively economically solved to a very large degree, and see the benefit
to all in doing so ... thus it didn't get done and packet pretty much died.

> I couldn't agree more that the only real failure is to fail to attempt
> anything new at all.

Your continued protestations here that things modern and useful
(or even basic fundamentals of communications, such as Shannon)
are "irrelevant" to amateur radio show that your statement is less
than totally honest.

[gratuitous personal attack snipped]

> Only a small percentage of hams virtually all of whom work in the
technology

products
> prove to be attractive and useful within the ARS*. That hasn't changed in
> nearly a hundred years, and all the ranting Carl can do won't make it
change
> now.

That doesn't HAVE to be true, Dick ... first, it's easier (and cheaper) than
ever
to "do advanced digital experimentation," with the availability of very
inexpensive
DSP development kits and FPGA development kits (hardward and software).

The issue is NOT the availability of suitable hardware and software ... for
a couple of hundred bucks you can set up to do your own DSP development
and design and program custom ASICs using FPGAs ... in your ham shack lab
...

The ISSUE is that too many people (like you) haven't expended the effort
to stay anywhere NEAR current with such technology and therefore can't
even begin to envision what is possible and easily within reach ... if only
one
has the knowledge ...

Being so woefully lacking in relevant, useful knowledge (and it does NOT
require an EE degree) is the biggest impediment that people like you suffer
from, Dick ... unfortunately, there are lots of hams like you ... which
bodes
poorly for amateur radio.

Dennis,

While I'm not conceding that 33.6 is the limit on HF data rates,
even that would be a SIGNIFICANT improvement over 300
baud HF packet, right?

The issue is not "Can we do better at HF?" The answer to that
is/and will continue to be "Yes."

The issue is "Why can't people like Dick comprehend the value
in doing so?"

A large percentage of my club's members are professional. We have RF
people, computer jockey's, generalists like myself, and others.

I think you are doing a generalization of all hams from a limited
dataset. Reading ARRL's publications and websurfing should convince
people that there is a lot of experimenting going on out there.

The ARRL web site, http://www.arrl.org, offers a good overview of the work of ARRL.

Among its pages is the "Inside Your League" series of articles about the work of the ARRL HQ staff. See:

http://www.arrl.org/news/features/inside-your-league.html

>Who is getting the money... are Congresspersons.... or Senators being
>bribed?

Not at all. Some of the money is spent for ARRL to meet with Congressfolks.

>And obviously
>there is from what I see, people recieving salaries too.... I guess I will
>have to pursue a salary from our local radio club, it is non-profit too. (I
>spend at least 20 hours per week doing various work related to the club.)

The salaries of the HQ staff is ARRL's largest expense. The volunteer who will give 20 hours per week to anything is a rare bird indeed! 20 hours per month is still the exception. ARRL could not be staffed by volunteers; there is too much work to be done and on those sunny days in June, the building would be empty. :-)

>If I can get the clear answers, which I do not have a right to being a
>non-ARRL member, but some of you are, as to where the money is going, I will
>send a money order out the next day I get the answers, for the membership

I think you have a right to ask the question and receive a straight answer. Did you ask it of ARRL directly, or only post here?

I've seen a similar thing with people that may feel to
be not getting enough respect. The doctors at the
hospital may just see him as a "worker droid" or such.
And thus he has more of a need to assume the "Professional"
badge. And to avoid something that might take away
from that.

It may be I'm suffering from intercoastal culture shock, but I'm
a bit amazed by this. In these parts if you take a foreign student
fresh out of school that you want to hire to do whatever it is
you let engineers with no experience do, and you apply for an H1B
visa with the job offer listing a $66,000 salary, the INS will decline
to process the application based on the opinion that you are
underpaying the alien. Only Americans have the right to work that
cheap.

>[your membership dollars at work]

Whatever the ARRL's other sins might be, based on what I've observed
here I'd say that the ARRL is making pretty effective use of their
human resources dollars and it is pretty clear their employees are
motivated to work there by considerations other than maximizing their
earning potential.

US railroad use of wire telegraphs was phased out over several
decades. It was essentially gone by the 1960s. Cheaper to install
telephones than to pay higher wages. They used American Morse, btw.

Steam locomotives, cabooses (aka cabin cars), block operators and
interlocking towers with people in them 24/7 have all but vanished for
the same reason. In fact, improvements in RR signaling have eliminated
the need for most of the communications that operators used to do
(train orders, work permits, etc.)

Source record: 42025

I am delighted to receive the following support for my comments.
The last sentence wasn't in my proposal, but I think I support it.

73, Hans, K0HB

To the FCC:

The members of the ADC Telecommunications Amateur Radio
Club (K0RT) urge the Commission to favorably consider the
comments of Hans Brakob, K0HB, John Rippey, W3ULS, and
others who have suggested that the vacated "Novice" bands
be set aside as a "national park for communications experimenters".

Our club is largely composed of engineers and technicians
daily involved in advancing the telecommunications art in
the US and around the world. We are concerned that amateur
radio seems to be declining as a source of new technicians
and engineers in the communications industry. We feel that
a "showcase for technology" within the Amateur Radio bands
might be a way for the Commission to encourage and focus
the excitement of discovery in technological matters among
young people, similar to the efforts of ARRL in their "Big
Project".

We propose that if such a "preserve" is established, that
Technician class licensees be allowed to participate at
power levels less than 10W.

Thank you.

It's my understanding that a proposal is just a proposal. There's no RM for it yet...yet the Radio Kops are making pronouncements.

Well, the 2.2 KHz kills any hope of modifying RM-9404...it was only 2.1 KHz wide for 136 KHz band. :-)

>Under the proposal for the "experimental farm" reallocation of the
>Novice subbands, it could be used in those subbands for voice, data,
>etc., at any desired data rate as long as the entire signal was inside
>the subband.

By all means, SEGREGATE those bands! Demand EM-ethnic purity! Make the experimenters ride way in the back of the bus! Keep "the bands" clear for the legacy modes!

You showem which side of the white bread is buttered, paleface.

>bribed?

"Details upon request" is written down on several of the 26 pages of
the ARRL FY2000 tax return forms. Lobbying expenses are reported
as a bit over $90K.

The rationale possible from the ARRL is "that works out to only about
half a dollar per member, very cheap." :-)

[attention Ed, that's a freebie rationale for the League] :-)

You hang in there, old timer. Git yer eddycasion from da moom
pitchas.

Just think -
Drugs, sex, killing, swinging and CW in "The French Atlantic Affair."
[the book, not the movie]

Hopelessness, despair, and a dash of CW in "On The Beach."
[photographed in black and white...ham radio is primarily white]

Huge flying saucers, alien domination, and CW saving the
world in "Independence Day."
[I have to admit it had a black fresh prince as a jet jock but then
Data was hiding in Area 51 and the US president was also a
jet jock and Jeff Goldblum knows all about 'puters...]

Radio time travel and disturbed mentalities in "Frequency."
[Dennis Quaid's character must have been disturbed that his
"son" didn't look at all like him and that Benton Harbor products
are timeless...]

Flashing tail lights in morse save an about-to-be shot down
hijacked 747 in "Executive Decision."
[even Kurt Russell and Halle Berry have to work in potboilers
to make $$$]

Monumental special effects and monumental public relations
along with a sound-over byte of a morse sparky save James
Cameron in "Titanic."
[shows to go ya that morsemanship, however slight, can earn
an Oscar, kingdom of the world...and result in a divorce and
exile to syndicated TV series production]

All of that is so...so...AUTHENTIC! :-)

Nope, it's not, Len. You know that our species will favor symbolism
over substance every time. It has been that way for at least ten
thousand years. Religion is a prime example. Who, in their right
minds, could possibly, in this enlightened day and age, believe
in the supernatural? "If that's all there is, my friend, then
let's keep dancing, break out the booze, and have a ball, if
that's all there is."

A very good question.

Its important that one's experiences in old modes be very recent in order to
have credibility.

No, just a truckload of code practice tapes and the force of the FCC
regulations on the chance that you'll have someone to communicate with.
Instead of planning for better methods.

You can be as dumb or smart as you want.

In many cases it covers all that is needed. Are
there unexpected situations that require thinking
to get around? Certainly! Is anyone saying
planning covers everything all the time? No!

> It's like the old German or Soviet armies - when their leaders
> went down, the rank and file were essentially lost, having been
> drilled incessently to do and only do what their authorities
> ordered. They never learned to think and act for themselves.

Is anyone saying we should practice/plan to the
point of Pavlovian response? No. Planning
and practice should also include "unexpected"
events to foster such independent thought.
Planning and practice does NOT imply 100% rote
reactions.

> You guys can be like that if you wish, but my training and
> experience allows me to think for myself when the going gets
> rough. It won't take a truckload of the latest technology to get
> me communicating.

And no one is saying that shouldn't be the case.
The pages of QST and CQ are filled with
emergency activities with all sorts of "field
work-a-rounds" that were done to address a problem.

You appear from your ongoing litany to believe
that in such cases, the immediate "fix" will
be morse code (CW). The pages of QST and CQ
do not, historically, support that perception.

Cheers,
Bill K2UNK

The spare ducting reached an exhaust level in the late 60's/70's
in NY city. The advent of digital multiplexers and fiber optics
allowed the recouping of considerable duct space by
pulling out the old "copper" cables.

Outstanding book. I read it a few months ago.
The tapping of the undersea Soviet telephone cable
was absolutly amazing...especially when you consider
the recording equipment needed to "tape" the
bandwidth for months at a time.

> >Exactly. Many people have now found they get all the

> would flop in areas where good reception could be had with "rabbit ears".
> Nobody thinks that way anymore!

The cost factor of the last mile is not that easy
to reduce. Many communities mandate all
buried services. It's relatively easy (and cheaper)
to run aerial cable (where the poles and
infrastructure permit) as opposed to trenching
new cables.

> New telecomm laws may make it more
> economic to run a single fibre rather than
> multiple pairs for telephone service, coax
> for cable TV, etc.

You can also run everything (include telephony)
over coax. Some places have tried "fiber
to the curb" with the last part of the "drop"
to the home being convential twisted pair or coax.

Cheers,
Bill K2UNK

The railroads initially offered an easy path for
alternative carriers to deploy long distance
connectivity. The existing telcos have routes all
over the place and most don't follow RR routes.

To take down a major metro area would require
considerable knowledge, time, evil talent, etc.

> Of course such wouldn't be without precedent,
> either. It has been done before

Throughout the Gulf war, the US was unable to
effectively take out the communications of
IRAQ... and that was 10 years ago.

Cheers,
Bill K2UNK

Which exams would those be? Without ever taking a Morse code test,
it is possible for an entry-level Technician-class amateur to operate any
mode conceived of in the history of the ARS.

>None-the-less, Morse Code has nothing to do with electronics, radio

Nothing new here, Carl -- you whine just about as well as any other
NCTA I've ever seen! All this personal stuff against me is just going
one step further to prove my point.

When I said I have a "live and let live" attitude toward no-coders
who DON'T whine about code, I meant just that. Nothing more,
nothing less. When they start whining and blaming me for everything
from ethnic cleansing to global warming, then they're fair game.
My attitude and my actions are perfectly fair and two-way. If you

don't see it that way, then go ahead and whine. I'm sure it makes you feel better.

I tune, belive me, I'm half ham and half swl. Specifically what
commercial modes are you talking about?? Which are used below 30Mhz.
What rules would have to be changed in order to allow these modes to
be used in the refarmed HF Novice Bands? Just open up those segements
and let 'er rip between those freq limits? Or what?
>
>
Actually I wouldn't have any problem with that scenario at all. With a
few notable exceptions every time I've surfed the Novice bands looking
for contacts in the past few years nobody wuz home. If the Novice
setasides are functionally dead space then why not?
>
>
Because: No more benefit will accrue ham radio taken as a whole than
it has where similar "new" modes have been allowed for eons above
30Mhz. Where precisely nothing new has happened too. OR what's the
point to dedicating ham spectrum space just so that a few
"experimenters" MIGHT emulate what the commecials are already doing?
This is "advancement of the state of the art"??
>
>
What rationales would those who advocate refarming the Novice bands to
unspecified "new" modes offer the FCC which would convince the FCC to
get tangled up in the inevitable resulting regulatory hassles? Versus
the FCC just saying screw it, just expand the phone bands like the
ARRL is recommending along with prolly 99% of the HF ops in this
country.

Delaware must have a good budget for public transit. My brother
does transportation planning for one of the counties in NJ (bus
schedules, traffic intersection planning, and various civil engineering
tasks) and might be interested in such in Delaware.

A 3khp diesel would probably take that to idle and spin field current to a
two MW plant. Diesels are good and idle cheap but they ain't that good.
Yes I know, the initial field current would more than likely come from the
batts that started Dr. Diesel's Wundermachin but they do need to be
recharged.

Just had to toss my old "national park" thing at me din ya Hans? You
got a LONG memory. Heh.
>
>
It's obvious as hell that the gist of those looking for "HF
experimental space" are talking wide modes. That's fine and per se I
don't have a problem with that because at least within the US the
Novice bands are dead space so who really cares who does what in those
spaces? Except the FCC who has to be able to ID the stuff, make
significant exceptions to the existing regs, etc. What incentive does
the FCC have to get into that endless rat's nest?
>
>
Beyond that there are two other major factors mitigating against any
such implementatations. First being that the few members of
"experimenter class" amongst us have had official blessing to do
"their wide things" in the vhf/uhf bands for eons and have have
produced absolutely zilch except great volumes of hot air and
"technical papers". What indications do you have that they would
actually do "their thing" on the HF bands which they have demonstrably
failed to do where they already have had the bandwidth for years??
>
>
Two, the avilablity of the Novice bands for refarming purposes at
least in this whacked-out USENET tower of babble in the current
timeframe gets down to a discussion abt whether or not to open up the
Novice bands to the hordes of 5wpm Extra Lite motormouths clamoring
for that space vs. more dead "experimental" space. Game over. Imsert
another quarter.

Hey, it's a good metaphor! If you hadn't made it up, I'da had to!

> What indications do you have that they would
> actually do "their thing" on the HF bands which they have demonstrably
> failed to do where they already have had the bandwidth for years??

No indications whatsoever, but I'd the eternal optimist. It just seems like such a great opportunity to kick-start something, that I just would never forgive myself for not trying.

But, hey, I'm starting to get a little bit pumped --- since I put my comments on the FCC web site last week, the tide has turned and there are several word-for-word copycats of my comments, plus another handful of variations on that same theme posted in opposition to the ARRL 'shuffle the boundary' petition. If nothing else, maybe I've delayed the decision so the ARRL can go back and do it right this time.

Yeah - 1-2 gallons per hour at minimum load, more depending on how
close to capacity it is loaded.

> > Hint: A 1000 watt (0.001 megawatt)four-stroke spark engine Field Day
> > genset gobbles 1-2 gallons per hour. OK, so since I'm in a really

> > . . . ?

Little Otto-cycle engines are not very fuel-efficient. Big diesels
are.

The most efficient diesels I have encountered are large 2 stroke
marine engines used to direct-drive the screws. Thermal efficiency of
up to 54% at 75 rpm (not a typo). The cylinders are kinda big, tho.

> A 3khp diesel would probably take that to idle and spin field current to a
> two MW plant. Diesels are good and idle cheap but they ain't that good.
> Yes I know, the initial field current would more than likely come from the
> batts that started Dr. Diesel's Wundermachin but they do need to be
> recharged.

'zactly. The prime mover has some serious accessory loads such as
coolant, lube oil, fule transfer pumps, etc. A transmitter of a few kW
would amount to a tiny load compared to its capacity.

Main point is that it could take many months to go through the fuel
supply that was stipulated.

The real question is, how long would it run without attention before
something failed? Diesel RR freight locos are typically serviced at 90

day intervals to meet federal inspection requirements. In the old days when RRs let diesels idle continuously, this meant they were running for 90 days at a stretch, and most of that time was not at idle.

PACTOR III is presently a purely digital mode and is 2.2 kHz wide.
Is a 2.2 kHz wide *digital* mode allowed in the phone/image bands
if it is not being used for phone or image? e.g. for sending a
text file?

You'd have to establish that Jim has cronies here. I really don't think
you find Jim's questions tedious. The tedium probably comes from your
inability to deliver a straight answer.

The scenario needn't bother you, Len. You aren't a ham and aren't an
ARRL member. You are free to experiment to your heart's content. You'll
just not be able to do any communicating on the ham bands.

I forgot "twit".

> Jim, you're questions get a bit tedious at times.

Only to folks who don't want to answer them. They're simple, straight,
direct questions, with simple, straight, direct answers. Like "what
mode did you use on 30 meters" or "what recent experience do you have
on 80 meters". You can't cheat an honest person.

Wading through numerous reposts of old stuff to get to a comment that
consists of "ROFLMAO" or "LOL" is tedious, too, but you don't see me
calling the author the names I was called.

> Besides, I don't see you
> asking these types of questions of your cronies.

I don't know who you mean. Is there some rule that says if I ask a
question of one person I must ask it of everyone?

Yes ... the 1-2 gal/hr for a 3000 hp diesel sounds VERY light to me.

The 50 hp Perkins 108 diesel on my 42 ft. cruising sailboat burned
about 0.75 gal/hr at 6-7 kt. cruise ...

> PACTOR III is presently a purely digital mode

"purely digital"? How? It's all a bunch of sine waves.

> and is 2.2 kHz wide.

That's at the highest data rate.

> Is a 2.2 kHz wide *digital* mode allowed in the phone/image bands
> if it is not being used for phone or image? e.g. for sending a
> text file?

The existing US (Part 97) rules are quite clear:

On the HF amateur bands, "RTTY", "data" and "CW" share one part of the bands and "phone" and "image" share the other part. PACTOR III is legal in the 'phone segments of the HF amateur bands ONLY if it's being used for voice or image.

To make matters worse, any RTTY or data mode used on the HF amateur bands
must not have a symbol rate greater than 300 bauds are not allowed on amateur HF at all.

So if you want to run PACTOR III beyond 300 bauds you have to do it in the 'phone bands and you have to use it only for voice or image. Yeah, "bits is bits" but the FCC doesn't see it that way. Yet.

This is one of the reasons for the "experimental farm" idea.

Will PACTOR III running digitized voice outperform SSB using the same bandwidth and power on HF? One way to find out....

Check out Part 97 - ARRL website is one source. Even a dyed-in-the-wool red-blooded All-American ARRL-supporting Morse-code-using mastered-the-Smith-Chart home-brewing pre-restructuring Yankee Extra non-genius like me figured out the

applicable rules in a few minutes.

2809. Tech advances force FCC to consider Ham HF freq auction

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-30 20:03:02 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0204301203.2b0c83a0@posting.google.com>
Source record: 42078

WASHINGTON (AP) - Spurred by the many recent advancements in the Laser ionization technology field, the ITI Corporation (Ionization Technologies, Inc. - Fairfax, VA) has proven that it is now economically feasible to synthetically ionize specific areas of the ionosphere, opening up new many new reliable and low-cost telecommunications applications.

The best frequencies for utilizing this technology lie in the HF portion of the electromagnetic spectrum. While the HF portion of the frequency spectrum has long since been allocated to specific purposes; there are many HF frequencies which could be re-allocated to better serve the nation. The Federal Communication Commission(FCC) is considering re-allocating at least half of the Amateur Radio Service's current HF frequency spectrum to the newly proposed ISS(Ionization Skip Service), where it can better serve the public's telecommunications needs.

Stewart Robertson, President of ITI, says; "The older naturally-induced HF skip communication techniques essentially waste 99.9% of the HF bandwidth, and communications are generally of very poor quality, very unreliable, and end up causing wide-spread interference. Using the new synthetic ionization techniques, we can specifically direct RF energy over great distances, wherever we want it, anytime we want it. Communications are no longer predicated on Solar activity - we can now directly and safely control ionization levels in specific areas of the ionosphere, opening up all kinds of new possibilites in reliable long-range communications applications."

New Improved Version - almost ready to send.
--

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's)
RM-10413 Amateur Service Rules Governing)
Operating Privileges)
)

PERSONAL COMMENTS OF JAMES MICCOLIS, N2EY

OVERVIEW

These comments are in response to the ARRL proposal for "refarming" the existing HF "Novice sub-bands" on the 80, 40 and 15 meter bands.

I. Discussion:

The ARRL petition does not address the implementation of new technologies by radio amateurs as repeatedly requested by the Commission in WT Docket 98-143. It simply proposes the elimination of the Novice subbands and their reallocation to existing popular modes, primarily analog voice and image. The ARRL polling method did not address any spectrum allocation alternatives other than possible changes to the existing subband structure.

I propose that the Commission take this opportunity to provide the Amateur Radio Service with a new incentive to try out with new modes on the amateur HF bands for experimental and educational purposes.

Advances in technology, changes in the license structure and test requirements have eliminated the need for special HF subbands for Novice and Technician Plus licensees. The "Novice subbands" have outlived their regulatory purpose, so I propose they be converted to a new purpose which will ensure the future Amateur Radio service continues our "proven ability to contribute to the advancement of the radio art".

II Proposal:

A. To "de-populate" the current Novice segments, I propose that all Novice (and Technician with code credit) licensees be authorized to use Morse code in all of the MF/HF spectrum now authorized for General class licensees, using the current power output level restriction of 200 watts.

B. I propose that the current Novice sub-bands be reallocated for non-traditional and experimental modes such as digitized voice, digitized image, high speed data, and other forward looking communications methods. Modes currently allowed in these segments would continue to be allowed without restriction.

C. I propose that Commission grant broad discretion to amateurs in the technical aspects of mode use in these subbands as to modulation and coding schemes, non-traditional technologies, and data/symbol rates. Specifically, the current limitations on occupied bandwidth and data/symbol rates would not apply to amateurs using experimental modes in these subbands, as long as the occupied bandwidth of the mode is entirely within the experimental subband. The encoding and modulations used would be documented according to current Commission rules. This "broad discretion" would only apply within the experimental subbands, in order to minimize interference.

Respectfully submitted,

James Miccolis, N2EY
136 Morningside Circle
Wayne, PA 19087

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but
they were over-ruled by the umpires in instant replay, who award it a
1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious.
It was poorly written, poorly executed, and was so incredibly
lame as to lack the true drawing power of a really masterful
troll. Maybe as high as a 1.6 for the intense stupidity of the
premise, but a 9.8? Never! The Armenian judges tear their
hair out, throw their balalaikas down in dismay, and perform
the traditional Armenian Dismay Chant! They demand a recount!

With all kind wishes,

de Hans, K0HB

Maybe a likely outcome is that new experimental modes are
allowed wide bandwidth up to the entire subband, and that
old modes are afforded no protection, and maybe yield
the bandwidth when an experimenter wishes the use of
the bandwidth, excepting emergency communications.

There's a lot more "loading" on a 3Mw plant than just the electrical
load. And it ain't just the engine efficiency which has to be
considered wrt to fuel rates. Those big generators don't spin in
virtually frictionless rolling element bearings like yer skateboard
does. They run in tilting-pad hydrodynamic or sometimes hydrostatic
oil film bearings which in themselves as subsystems have horrendous
losses in the context of this thread. Merely supporting the shaft of a
3Mw class generator at zero electrical load costs beaucoup Kw worth of
fuel/hr alone. Ain't never gonna cost only 1-2 gallons/hr to spin one
of those suckers. No matter what the prime mover might be.

Nice troll. The amount of energy required to ionize a portion
of the ionosphere would run up the electric bill so high it would
be cheaper to make a phone call or lease dedicated fibre for
that matter......

If somehow the amount of energy required was low enough,
hams could make their desired propagation if necessary
for some interesting DX......

If some company actually did this, hams could piggy back on
that ionized patch for some interesting off-peak DX....

Sounds good, do it. I'd add something to the effect that
experimental modes have priority over legacy modes
except for emergency
traffic in the subbands.

Something else: Commercial power plants need human supervision
to keep running for more than several hours at least. If no operator
were on duty, the variations of load would either under or overload
the plant, causing automatic shutdowns. Presumably an oil refinery
would be a fairly constant load, but there probably are things like
thermostatically controlled electric heaters and stuff like streetlights
that vary according to the weather and time of day that could
make the total load wander out of the automatic shutdown
tolerance windows. And if there's a local town is also on line,
lightbulbs burning out and not getting replaced will lighten the
load over time, also pushing the system to shut down.

Movies tend to depict the electric and phone systems being
fully automatic and autominious, requiring no human supervision
other than collecting payment for electric and phone bills....

It's my understanding that a proposal is just a proposal. There's no RM for it yet...yet the Radio Kops are making pronouncements.

Well, the 2.2 KHz kills any hope of modifying RM-9404...it was only 2.1 KHz wide for 136 KHz band. :-)

>Under the proposal for the "experimental farm" reallocation of the
>Novice subbands, it could be used in those subbands for voice, data,

By all means, SEGREGATE those bands! Demand EM-ethnic purity! Make the experimenters ride way in the back of the bus! Keep "the bands" clear for the legacy modes!

You showem which side of the white bread is buttered, paleface. :-)

You hang in there, old timer. Git yer eddycasion from da moom
pitchas.

Just think -
Drugs, sex, killing, swinging and CW in "The French Atlantic Affair."
[the book, not the movie]

Hopelessness, despair, and a dash of CW in "On The Beach."
[photographed in black and white...ham radio is primarily white]

Huge flying saucers, alien domination, and CW saving the
world in "Independence Day."
[I have to admit it had a black fresh prince as a jet jock but then
Data was hiding in Area 51 and the US president was also a
jet jock and Jeff Goldblum knows all about 'puters...]

Radio time travel and disturbed mentalities in "Frequency."
[Dennis Quaid's character must have been disturbed that his
"son" didn't look at all like him and that Benton Harbor products
are timeless...]

Flashing tail lights in morse save an about-to-be shot down
hijacked 747 in "Executive Decision."
[even Kurt Russell and Halle Berry have to work in potboilers
to make $$$]

Monumental special effects and monumental public relations
along with a sound-over byte of a morse sparky save James
Cameron in "Titanic."
[shows to go ya that morsemanship, however slight, can earn
an Oscar, kingdom of the world...and result in a divorce and
exile to syndicated TV series production]

All of that is so...so...AUTHENTIC! :-)

The only real constraint is lubrication; diesels are hell on lube oil from shearing. Beyond that the fuel feeding pumps run in what is in effect their own lubricant and coolant. Kind of like the Waterbury pump on a ship: you could damn near seal it in for the life of the vessel.

I can see why they let it idle, particularly in cold weather. Not only for the engine but for aux systems like air. You ain't never had fun like air brakes that have not had the moisture bled off on a cold winter's nite.

A local dairy had a dried milk plant using an old Ford V8-60 running on natural gas that ran continuously from the plant's construction in 1938 to tear-down in the 70s when dry milk could not turn a profit. They did have to do things like a dry sump oil system with two tanks to allow a running change and I would imagine plugs were interesting as well as breaker points.

PACTOR III only transfers digital information. A voice would have to
be digitized/compressed/coded and then sent over PACTOR III. There are
a number of digitized voice compression techniques/specs available.

> >

You're such an one-demensional jerk you can't begin to comprehend anything about the overall state of ham radio or what is involved in making it go on a daily basis. If you were you'd know that it operates quite well with no mention of anyone named Shannon, and has for a hundred years. If Shannon was never again even considered that wouldn't change. Long ago that was analyzed here on rrap and the concensus from those who know is that Shannon is first mentioned in a university EE program in the third year. A long search through my personal library of ARRL publications found no mention whatever of that name through the latest handbook I had, and I finally found a couple pages on his theory in my copy of
Electrical Engineers Handbook, which was only a couple of years old. Do YOU own a copy of the Electrical Engineers handbook? I doubt it, you already know everything, why waste a copy?

>

Who the hell are you to tell other hams what they should do with their hobby time? You happen to work in your favorite wallow, so that's what you want to do. Others are free do to likewise without you haranguing them nonstop. So stuff it back where it belongs.

>
> The ISSUE is that too many people (like you) haven't expended the effort
> to stay anywhere NEAR current with such technology and therefore can't
> even begin to envision what is possible and easily within reach ... if only
> one has the knowledge ...

The ISSUE is that you're a one-demensional dipshit who thinks every other ham MUST be interested and involved in exactly the same thing you are. In other words, you are pretty stupid.

>

>
> Being so woefully lacking in relevant, useful knowledge (and it does NOT

Carl, Kind Sir, I have some very bad news for you - in ham radio
almost every contact you make is one on one. Most of it is even done
manually.

Of course, we really don't expect you to actually know anything about
ham radio.

Excuse me but I am not sure the poster, in spite of his
excellent pedigree, has it right. I think Morse CW is
allowed everywhere on amateur HF freq.s by the regs. It is
only by gentlemen's agreement that Morse CW does not appear
much in the phone segments.

I would like to see gentlemen's agreements control what goes
on in the refarmed novice slivers, not have the FCC get a
headache trying to rewrite the rules. Unless there is some
way to keep commission rules for the proposed "experimental
zones" very simple, I think they will opt for the easy way
out by extending phone edge down and rtty/data edge up.

73,
Clay N4AOX

Ok, let's toss the whole licensing system and start over: Technicians
get all above 30MHz, Generals get everything, and Extras, who must
swear never to *ever* use any phone mode or a computer ever again, get
the right to bitch about 5WPM CW tests being too easy.

Preexisting Extras, of course, would be allowed to downgrade.

Mabey he's posting for "May the 1st" ??

Actually they already have an "atmospheric
ionizer" - fully installed and operational...

It's called the HAARP...

I think that I will let your words speak for your views and let it go at that.
I don't think that ARRL needs any rationale for its lobbying efforts with
congress.

>"Details upon request" is written down on several of the 26 pages of
>the ARRL FY2000 tax return forms.

You can't be seriously suggesting that ARRL's tax returns be considered as a
good answer to his question.

I think my answer was a bit more useful to him than yours.

Sweet little engines and they were designed back in the stone age. My only encounter with one of 'em was when I skippered a chartered Columbia out of Rock Hall for a couple elderly $$buddies and did the Annapolis-Inner Harbor three-day weekend circuit for 'em. The WX was fershtink most of the time and the traffic was heavy so I spent a lot of the trip with the rags on the deck and running under power. Which is my "natural mode" anyway. Got back to the dock and refueled the thing - it only took 12 gallons. Dayum!

They could also stipulate that the sub-band is a free-for all, with no restrictions as to mode or bandwidth. Doesn't get more simple than: "These are your band edges. This is your power limit. Stay within them."

Of course - and trying out various schemes would be part of the fun of using
"PacVoice".

But under current rules ya gotta do it in the 'phone subbands if ya wanna try
it on the HF ham bands.

(Ed McMahon mode on):

"YOU ARE CORRECT, SIR!!"

(Ed McMahon voice off)

CW is indeed allowed almost everywhere on the ham bands (two exceptions being
the Alaska emergency frequency and the 219 MHz allocation). Upon rereading I
can see where my post would tend to convey the impression that CW is not
allowed in the 'phone bands because RTTY and data modes are not allowed there.

Sorry for the confusion.
>
>I would like to see gentlemen's agreements control what goes

>zones" very simple, I think they will opt for the easy way
>out by extending phone edge down and rtty/data edge up.

My rewritten proposal is shorter than the original, and involves just two basic
points:

1) allow Novices and Techs to use CW on all General frequencies, 200 W power.
2) remove the bandwidth and symbol rate restrictions in the former Novice bands

to encourage the use of new modes.

That's really all there is to it. As long as a mode meets the other applicable
FCC regs such as using a published encoding/modulation scheme, it would be
allowed in those subbands.

>N2EY wrote:

>> being used for voice or image.

This part would be much more clear if it was written like this:

On the HF amateur bands, "CW" is allowed practically everywhere.
"RTTY", "data" and "CW" share one part of the bands and "phone", "image" and
"CW" share the other part. By gentleman's agreement, however, "CW" is
rarely used in the phone/image parts of the bands.

>> PACTOR III is
>> legal in the 'phone segments of the HF amateur bands ONLY if it's
>> being used for voice or image.
>>
>> To make matters worse, any RTTY or data mode used on the HF amateur
>> bands
>> must not have a symbol rate greater than 300 bauds
>> are not allowed on
>> amateur HF at all.

Rewrite this as:

To make matters worse, any RTTY or data mode used on the HF amateur
bands must not have a symbol rate greater than 300 bauds. Faster RTTY/data
modes are not allowed on amateur HF at all, regardless of subband used or
actual bandwidth occupied by the mode.

You can run 60 wpm Baudot RTTY with 850 Hz shift (actually, the shift can be
anything less than 1000 Hz) but if you come up with a version of PSK31 or one
of the TOR modes that runs faster than 300 you're not allowed to use it on
amateur HF in the USA.

Thanks for the pointers, Clay.

>
Folks,

I see your point, but such things are not necessary as part of the regulations. We don't have a rule that says CW must stay out of the 'phone bands except when needed because SSB won't get through. But that's pretty much what goes on, by gentleman's agreement.

Simple changes have the best chance.

There's an old joke in these parts that has the civil engineering student
asking " how did they build the pyramids without state-of-the-art construction
equipment?" Professor replies "they had state-of-the-art whips, that's how..."

The French spent an enormous amount of time, money and lives in Panama before
giving up on a sea-level canal. The American success was built on two great
advances - control of disease by controlling insects that spread it and a
design that used the abundant rainfall to power a system of locks rather than
trying to just dig an enormous ditch.

Then there's Hoover Dam....

There's basically only one problem I have with all this, aside from agreeing completely with W3RV's analysis. That is- It concerns me when we ask for specific spectrum for experimentation that we open ourselves to the unintended consequence of all other amateur spectrum being thus routinely, over time, becoming considered as NON experimental.

I Can hear it now-

"Testing, one two three." "Hey, ya lid, take your testing to the *experimental* band segment!!!".

I wonder if it isn't a mistake to even go there.

Shall we have a rousing rendition of MacAndrews' Hymn, then, me bucko?

Typical EMD locos have lube oil capacity of 250 gallons or so. And
they have a large sump option.

EMD 2-stroke locos idle at about 4 gallons per hour, driving all the
accessories (air compressor, battery charging, lights, etc.) So my
figure of 1-2 GPH is probably an order of magnitude low.
>
> I can see why they let it idle, particularly in cold weather. Not only
> for the engine but for aux systems like air. You ain't never had fun like
> air brakes that have not had the moisture bled off on a cold winter's
> nite.

AMEN! Plus the batteries and other systems. Most importantly, until
recently diesel locos did not use antifreeze in the coolant.

Newer locos are shut down in above-freezing weather nowadays. Improved
designs are easier to restart. Many locos are now equipped with a
small auxiliary engine so that the prime mover can be shut down, even
in cold weather. The auxiliary keeps the battery and air charged and
the coolant above freezing temperature, at a cost of 1/2 to 1 GPH.
Also reduces wear on the prime mover.
Kim HotStart is one such system.

The ultimate surface transportation solution is the electrified
railroad, as demonstrated today in Europe and Japan, and for almost
100 years by the LIRR, PRR and others.

So let's say our hypothetical 2 megawatt diesel plant is burning 10
GPH running the derelict transmitter and some other loads. If
connected to a 100,000 gallon tank, it could run for 10,000 hours -
over a year. Load variations are not that uch of a problem because the
diesel has a governor to keep its speed constant. Line voltage might
wander a bit if automatic compensation was not employed.

Natural gas burns much cleaner than gasoline or diesel. Lube oil and
spark plug contamination are much lower. But the breaker points?

--

For a surreal example of environmentalism romancing smokestack
industry, search on "biodiesel" at your favorite search engine. Only
real problem with biodiesel is the high cost of the raw veggie oil,
which the BD folks get around by using old oil from the deep fryers of
restaurants. Such oil is usually a pain in the neck to get rid of. The
exhaust smells like french fries but that's not bad thing.

However, it is my understanding that the oil uses by McDs is so loaded
with additives that it cannot be used for biodiesel purposes. Gums up
everything. Add that info to W3RV's sauce story. Moral: Eat at the
real greasy spoons, not the imitations.

When I was a kid I knew an OT (a ham of course) who used to dispose of his used engine oil by letting it set for a few days to settle
out the heavy stuff, then he'd pour it off into his fuel oil tank for the household oil furnace. Diluted with a couple hundred gallons of
fuel oil, the furnace never knew the difference. (He was also in the heating and air conditioning business.)

Of course, that goes without saying. It's a necessary characteristic of narrow band RF signals. Third, fifth, seventh, etc harmonics tend to get lost in space.

> But under current rules ya gotta do it in the 'phone subbands if ya wanna try
> it on the HF ham bands.

But is PACTOR III legal in the phone subbands if it does not contain voice or image information? PACTOR III, as it is being offered, does not contain voice or image information. As it is being presently offered, it is a keyboard mode. Is PACTOR III legal in the USA?

Ah, yes. Thanks for reminding me...

http://groups.yahoo.com/group/MURS-OPEN/

MURS (Multi-Use Radio Service) is a fairly new no-license VHF personal
radio service which operates on 151.820, 151.880, 151.940, 154.570,
and 154.600 MHz with a maximum ERP (Effective Radiated Power) of 2
watts. The FCC MURS rules permit voice, data, and image communication;
as well as external antennas. Unlike the Amateur Service, there are no
restrictions on business activities with MURS, and the 2W ERP limit
works as a major benefit for building a nationwide Internet-backboned
public-access wireless network. Any low-power VHF business radio
capable of meeting the newer FCC-mandated 7.5Khz channel spacing and
11.25Khz bandwidth limitations(most manufacturers refer to this as
12.5Khz channel spacing), can be used on the MURS frequencies; this
includes most handheld business radios built after 1995.

... also, a modified VX5 could also meet all the MURS regs(except the
"type accepted" one).

...BTW, if you substitute "Internet Gateway" for "Synthetically
Ionized Region of the Ionosphere", things work out about the same...
except for Alaska and a few parts of Montana, Wyoming, and Alaska ;^)

The whole scenario goes out the window (past the shade and the
coke bottle) if you hypothesize that the diesel engine driving
the generator could tap into the refinery's product. It would
take quite a while to run through several, 10-million-gallon
tanks of diesel fuel. Then it does become a lubricant- and
coolant-limited problem.

What was the time frame of 'On the Beach' anyway? I'm left
with the impression it was only months' duration - perhaps
a couple of years on the outside. After seeing that movie,
'Waltzing Matilda', no matter how spritingly played, always
sounds like a funeral dirge to me.

Dick,

I have never said that "if it isnt' from the very latest technology it's
only useless".

What I *have* said is that we, as amateurs collectively, had better start
adopting
new technology as the FCC has strongly suggested, because clinging virtually
exclusively to stuff that's 50+ years old just isn't going to cut it, either
in terms of
attracting newcomers in the future, or in terms of satisfying the FCC that
we are
truly living up to 97.1 ..

> Har-de har har!!!!!

"Laughing" like the village idiot doing a pirate impression doesn't increase
your
(pitifully low) credibility ...

> daily. No surprise whatever, in fact just what we've learned to expect
from you.

Where did is say THAT??? What I said was that message forwarding is/was
"clearly a highoy useful application" ... your idea seems to be (again) that
"if
it's not manual, it's no good" ...

Again, how do you think you receive these posts? And your e-mail?
It's done by message forwarding (automatic) between computers.

Are you suggesting that all that should be tossed in the trash and abandoned
because some (spamers) abuse the system? Are you not aware that there
are increasingly intelligent software solutions to SPAM?

Why is the backward way ALWAYS your prefered way, Dick???

[snipped Dick's attempt at denial of the stagnation of packet radio]

[Dick conveniently didn't copy the portion where he asserted that "advanced
digital expermentation" is "beyond the capabilities" of hams ....]

stuff it
> back where it belongs.

Dick ... YOU are the one who is telling everybody that they "can't possibly"
do "advanced digital experimentation" "because it's beyond their
capabilities."

I am merely pointing out that that is NOT TRUE and encouraging those who
are interested to ignore your ignorant pronouncements and have fun advancing

the radio art despite your protestations.

> > The ISSUE is that too many people (like you) haven't expended the effort

> The ISSUE is that you're a one-demensional dipshit who thinks every other
ham
> MUST be interested and involved in exactly the same thing you are. In
other
> words, you are pretty stupid.

No, Dick ... I don't think (or say) that *everyone* "must" be interested or involved ... I merely try to counter your backward-thinking attempts to disuade ANYONE from doing so ...

One has to conclude that your constant attempts to convince everyone that "What we have is good enough." and "You can't possibly participate in advanced digital experiments because it's beyond your capabilities." must be a reflection of your own inability to understand advanced technology and its value/utility, resulting need to attempt to pull everyone down to your own level so you won't have to face your own inadequacies.

"Virtually exclusively"? Carl, I think you grossly overstate your case!

While the majority of hams are content to use modes and methods
pioneered decades ago, there is a significant (and I think growing)
minority who are not.

While the amateur community may not include hundreds of bona fide
inventors, we are blessed with hosts of tinkerers and innovators who,
seeing some new gimmick or technology say "Aha, I know what practical
use I could make of that".

I concede we will not be able to base our "technical worth" to society
on our bleeding edge inventiveness (and we never have) but rather on
our proven ability to reduce new and exotic technologies to practical
and cost effective applications which can be adopted by other industries.
Art Collins and his cohorts didn't invent SSB, but they sure proved it as
a practical HF application and revolutionized long distance voice
communications for a generation.

AMSAT and their counterparts didn't invent satellites, but they proved
the value of low cost LEO technology and a new industry now has
sprung up based on that amateur "tinkering", and not coincidentally
we had to fight a mini-battle to keep them from gobbling up the very
spectrum space we used to prove-in the concept.

We didn't invent packet switching, but we figured out low cost ways
of transplanting it from copper to RF. Many mobile data services can
thank us for "proving the concept".

WA4APR and friends didn't invent GPS, but they deduced a cheap
way to marry that technology with packet radio to come up with APRS.
That tinkering now founds a new capability in use by public service
agencies, so the local sheriff need no longer yell "Car 54, where
are you?, and the copy-cat commercial service "AVL" which helps
shippers locate their trucks on our vast highway system to within
a couple of meters.

In those examples lies the seed we need to nurture for our future
contributions to the state of the radio art, and as an added bonus,
out of that mass of "tinkerers" will also certainly step a small number
of bonafide "inventors" and scientists.

Some years ago, Nelson's Needle in Trafalgar Square needed a major masonary renewal and the statue needed cleaning badly. Now this had to be put up somewhere after the Napoleonic Battle of Trafalgar and all of the buildings there now were there then. No one had a clue how the statue was put up there to begin with let alone how to get it down so the USAF and a big cargo helicopter did the deed coming and going.

It is incredible how much lore has been forgotten over the years not to mention dirty tricks and trade secrets. A lot of work in the older parts of town has uncovered everything from unknown cable car tracks, cisterns for horses, and other dross none of which was recorded anywhere and Omaha only dates from 1854. If we ever have time travel and really grok the Egyptian pyramids which are rather small change by world standards I suspect an awful lot of civil engineers will ring out with 'Oh, Shit' and

a few labor foremen will wonder what the fuss is about. Remember the first time you put brushes in a generator?

One of the more interesting theories on the Pyramids is that it was a giant make-work project for people during the Nile floods and the rest of the year for the scribes and surveyors needed to determine land allotments after the flood ended. Having worked in an entire corporation of scribes and surveyors I can testify they get surly when unemployed.

And never eat at a place called Mom's.

Kind of reminds me of the soybean license plates from WW2. Great idea
unless you owned a goat.

Sherman tanks had a pony engine but Abrams do not. So rather than start a
600+ hp turbine whilst dug into a sand dune, the crews discovered a way to
keep warm in a desert nite. But their requistion for 10k body bags caused
a hell of a stir.

Dick

2873. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy

Message-ID: <9f4bfe89.0205010846.18c150c3@posting.google.com>
Source record: 42192

Here are some numbers to think about. These are the number of unexpired
FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of April 30, 2002:

Novice - 38,584 (decrease of 10,745)
Tech - 239,555 (increase of 34,161)
Tech Plus - 80,301 (decrease of 48,559)
General - 139,022 (increase of 26,345)
Advanced - 85,691 (decrease of 14,091)
Extra - 100,244 (increase of 21,494)
Total - 683,397 (increase of 8,605)

The number of Extras topped 100,000 on April 23, 2002.

I don't have a report handy, but here are some things the money goes
for:

- QST and other mailings members get for free (contest forms, for
example)
- Other services to members and nonmembers
- Salaries, benefits and expenses of ARRL employees
- Expenses of directors, vice directors and other unpaid staff
- Public relations activities (handouts, press releases, etc.)
- W1AW station operation
- Operation of Hq. complex, including everything from salt for the
front steps to buying products to be tested in the lab)
- Field organization
- Defense of amateur radio at all levels of government and industry
>

> or image information?

I've answered that question about three times already, Cecil. It's
also in Part 97.

The answer is NO. PACTOR III is not legal in the amateur HF phone
subbands if it does not contain voice or image information. None of
the RTTY/data modes are legal in the HF amateur phone subbands.

> PACTOR III, as it is being offered, does not contain
> voice or image information.

Which means if you externally digitize the voice or image, you can use
it in the phone subbands for digitized voice or image. But ONLY for
digitized voice or image.

> As it is being presently offered, it is a
> keyboard mode. Is PACTOR III legal in the USA?

As a "keyboard mode" (Part 97 does not use that term) PACTOR III is
only legal in the US amateur HF bands if:

1) it is used in the non-phone subbands
2) it is used at speedlevel 1 (SLV 1) with the tones set not more than
1000 Hz apart.

Did you read the applicable parts of Part 97 yet, Cecil? The answers
are all there.

Part 97 has changed since my 1989 copy of it so I don't know what parts
are still valid. That's why I'm asking. Here's what SCS sez about PACTOR III.

"PACTOR-III is an offer from SCS to "the world". We cannot say where
inhabitants of countries are allowed to use it or not. I'm sure this
question gets clarification in every country as time goes by.

There's NO indication on WHERE $90K+ is spent. Is it to "congress?"

More likely it is activities concerned with the FCC, not congress.

It seems unfortunate that details aren't or won't be forthcoming.
Lobbying for the membership is a very valid exercise of influence,
no harm in that. The "it's none yer business" sort of answer on
what the league does is not a good one.

The ARRL is very influential on amateur radio matters, has been
so for decades. That still doesn't justify a minority with a major
influence as being somehow more noble an effort regardless of
the expenditure.

>>"Details upon request" is written down on several of the 26 pages of

Hans, you are grossly over-reacting.

>While the majority of hams are content to use modes and methods
>pioneered decades ago, there is a significant (and I think growing)
>minority who are not.

While this newsgroup's content is composed mainly of a very tiny slice of all licensed radio amateurs, it is nonethess a sampling.

An observation of that sampling indicates a strong propensity to extremely conservative practices and procedures overlaid with rather gross ignorance of the state of the radio art in general, if there is any evidence of knowledge of radio arts at all beyond the marketing phrases in magazine advertisements.

>While the amateur community may not include hundreds of bona fide
>*inventors*, we are blessed with hosts of tinkerers and innovators who,

>sprung up based on that amateur "tinkering", and not coincidentally
>we had to fight a mini-battle to keep them from gobbling up the very
>spectrum space we used to prove-in the concept.

That is a gross exaggeration which defiles the entire space
communications industry.

The "mini-battle" for the last Low-Earth Orbit satellite communications
spectral bandspace was NOT fought entirely by the ARRL and
AMSAT. The majority of the commentors on public view at the FCC
Reading Room are the corporations and services already directly
involved in space communications that affect more citizens than just
radio amateurs.

>We didn't invent packet switching, but we figured out low cost ways
>of transplanting it from copper to RF. Many mobile data services can
>thank us for "proving the concept".

Flag-waving with just a flagpole. The "low-cost ways" can be ascribed
to the miniaturization of integrated circuitry (microprocessor as a
common example). Time-division multiplexing necessary for packet
switching systems was already beginning in HF data (teleprinter)
communications in the 50s. Think ALOHA as having more influence
on "packet switching" to the industry.

>WA4APR and friends didn't invent GPS, but they deduced a cheap
>way to marry that technology with packet radio to come up with APRS.

A good innovation but impossible without either GPSS or GLONASS.
GPSS started with NAVSTAR, a USN program with strong looking-in
by the USAF and US Army.

>That tinkering now founds a new capability in use by public service
>agencies, so the local sheriff need no longer yell "Car 54, where
>are you?, and the copy-cat commercial service "AVL" which helps
>shippers locate their trucks on our vast highway system to within
>a couple of meters.

As a former member of the Position Location Engineering group at
RCA Electromagnetic and Aviation Systems, Van Nuys, CA, in
the 1970s, I have to state that your summation is GROSS
exaggeration. Several electronics corporations were already in
development of vehicle location systems using many different
concepts in the 1970s when NAVSTAR was first being test flown.
This included position reporting back to a central dispatch point

by radio data in several different parts of the EM spectrum.

Neither the GPSS nor GLONASS systems are intuitive, easy-to-read-directly navigation systems but require dedicated micro-controllers to translate satellite signals to human-readable values. Those have been available for slightly over a decade to consumers as well as vehicle operators. It is hardly an innovation to take available position data and communicate that to a central dispatch point. That was already in systems goals when NAVSTAR was proving successful. See the adaptation already planned for the US Army TACFIRE and the all-service inclusion as part of JTIDS in the late 1970s, early 1980s. See also the US military's use of GPSS in various forms during the Gulf War of 1990-1991, a decade ago.

The same technology base of reduced chip-count ICs that enables $40 microcontroller-driven lawn sprinkler controls enables a $250 portable GPS receiver with LCD readout that includes a simple map display. Radio data transfer was already an accomplished task in many radio services a half century ago, before the GPSS was made possible for all to use.

Investigate Terion Corporation and their new grant of HF frequencies for reporting vehicle positions...just made possible by the FCC.

>In those examples lies the seed we need to nurture for our future
>contributions to the state of the radio art, and as an added bonus,
>out of that mass of "tinkerers" will also certainly step a small number
>of bonafide "inventors" and scientists.

Of course, no doubt aided by the regressive thinking that emphasizes the very first communications mode skill as "so necessary" for all radio amateurs to achieve for licensing.

I too agree it is well spent. I have no problem with
ARRL direction (in general). I disagree on one
specific issue (which is why I became a founding
member and am on the BOD of No Code Int'l).

Cheers,
Bill K2UNK

That is the exact reason why I dropped ARRL membership in 1982
and have no regrets whatsoever about doing the same. I've heard
the "it's none of your business" in a roundabout way, from League
Officials at the dozen or so hamfests I go to. They will never see
one red cent of my money, even if it meant the end of ham radio
and the farming out of all the ham bands to commercial interests
by the FCC, which has been happening from 220 mHz and up.
R.H. may have cleaned up HF, especially 75 meters, but in 10 years
ham radio Spectrum will "top-out" at 440 mHz.

"CINCSAC?!?" The USAF didn't come out of the USN, mister chief.

Neither you nor I will know of the possible alternative futures at any given time. Please do not use such a self-defining statement to "prove" any point. It does NOT prove your point.

Single Sideband existed first in landline telephony, as part of frequency-multiplexed multiple circuits on one pair of wires. That was dubbed "carrier" equipment by those involved with the hardware. That was before 1930.

The "carrier" equipment was itself carried on Single Sideband radio frequencies after 1930. The Dutch were the pioneers in that. [see the "Collins SSB book" by two who were at Collins Radio, chapter 1] Commercial and military SSB was typically 12 KHz bandwidth, carrying 4 voice-grade circuits simultaneously.

SINGLE CHANNEL SSB didn't become practical on HF until after WW2 when quartz crystal and general frequency control technology could permit easy tuning to within about 100 Hz of any specific frequency in HF. Single-channel SSB on HF is now a standard long-distance communications mode in maritime radio, commercial or private.

Back-room bargaining and buddyism gets one contracts. It does absolutely nothing for electrons and EM waves despite the titles and ascribed importance of the partners in rooms. Trying to equate cronyism, nepotism (of a kind), and under-the-table dealings with the government to "advances in amateur radio" is not a quality item.

Good luck on THAT one, mister chief...

As I have pointed out already in an earlier response in this thread, Part 97 is available online at several websites. ARRL is the one I use. FCC and several others have it too.

But I think you know that.

>Now that's the essense of simplicity.

Yup. But such a ruling would guarantee the band would be full of analog voice
signals pretty quick. Such a feature is essentially the same as the ARRL
proposal. If there are no restrictions on mode or bandwidth, some folks may
have a hankering to try out hi-fi AM or wide-deviation FM. Since such modes are
nontraditional in ham radio, they could say they were experimenting.

>The good thing,
>no, the GREAT thing, is that the "experimental zone"
>would then be totally encapsulated within the larger
>ham bands.

Both Hans' and my proposals already include that feature.

One of the reasons the Novice bands are in the middle of the bands was to
encapsulate them. Which was kinda dumb because the real problem in the
early-mid Novice days was harmonics. Crystal control pretty much avoided the
bandedge problem. It would have made more sense to have had the Novice bands be
harmonically related to each other so that the same xtal could have been used
on more than one band.
>
>What say Jim, Hans, Carl, et al?
>
I say all that's needed is the following:

- Give Novices and Tech Pluses use of CW, 200 watts, on all frequencies where
Generals can operate.
- Remove the existing bandwidth and data/symbol rate restrictions on RTTY/data

modes from the former Novice bands ONLY. Digitized voice and image would be allowed in these subbands, too.
- New modes would need to be documented in the same way as before (post a description on a website and send the FCC an email. No STA required. Have fun!

Things like power limits, APC, allowing old modes only for the use of coordinating new ones, etc., just gum up the works.

That's right- YOU GUESS, and as usual, you guess wrong! There's a huge difference in the minds of most of those who have one that is in any way open between believing that a fully qualified ham radio operator should be able to use the most basic radio mode, and Carl insisting that anyone who sees any communications value in CW has no interest whatever in anything more modern.
That is the essense of this scuffle.

I am completely serious! I had some reservations as to whether FCC would buy into my idea, but I get more encouraged that the idea seems to be gaining traction and supporting comments from a wide variety of other amateurs. Maybe, just maybe, this is an idea right for the times. Whatever happens, the comments have discredited the shabby ARRL effort to present the FCC with a 'concensus'.

Took the Smoker out on the lake this evening to blow the winterizing fogging oil out of the motor. The rig felt like a thoroughbred horse which had been stabled all winter, and just wanted to run and run and run. What a joy to cruise down the lake making long graceful S-curves under the stars at three-quarter throttle!

Amateur radio .... fugetabowdit till winter.

I had promised a review of the QST cover art for people recently, so after recieving the May issue, here goes:

After doing a diss on the last one, I have to say that the May issue is quite good. My first impression was that I liked the lit interior of the tuner. Then I noted the content lines were not obscuring the photograph.

Next, I really liked the yin-yang effect between the tuner and background. Then the tex for the EZ-tuner casting a shadow from the lit area inside the tuner was a cute effect.

All in all a very good cover.

It doesn't really matter, Jim. I think Brian not only believes that Jim has cronies, he probably has cohorts too.

Why, *of course* you do, Cecil! Carl, too! But I'm sure that most everyone else is still wondering about your credibility, given that you both were singing the same song some five years ago, at least that's how long I've been hearing it since I first landed here on rrap. But for some strange reason, it's all hat and no cattle, or all saddle and no horse, take your choice. Meanwhile you play antennas and do your Novice speed CW between shots of scotch, and Carl yaks on single sideband between loony rants.
We know exactly where you're both coming from.

As I recall, the surviving crew of the sub was enroute from Australia to the US when the nuclear war broke out. When they arrived in San Diego after "driving time" of whatever it took, a couple months seems right, they found the ghost town with the puzzling transmitter being keyed.

Tnx Jim. Hope that makes me a crony of yours.

>What was the question, again?

There are at least two:

"What mode do you use on 30 meters?"

"What is your recent experience in the Novice bands?"

For some reason, certain folks get very upset when asked those questions. I
don't know why.

omigawsh....

In this same class are the Easter Island monoliths - stone statues as tall as houses, weighing as much as boxcars, that were carved from solid rock and transported miles over rolling terrain, then stood upright on temple platforms. Then a "topknot" of a different kind of stone was brought from a completely different part of the island and placed on top. How was it done? Lots of speculation until the late great Thor Heyerdahl asked some of the locals to show him how and offered to pay for a demo.

You oughta see what they dig up here in Philly!

One of the locals named Henry Mercer set up a museum around 1900 up in Doylestown. The Mercer Museum is unusual in that he went around and collected ordinary, everyday stuff and info on how it was used and made. He was also a nut for concrete - built the museum and his house out of it.

I would imagine that most hams' views of how the band segment should be changed are closer to ARRL's view than to yours. It remains to be seen whether most of the comments favor status quo, voice/image only or support the basic premise of ARRL's position.

Concensus is not a synonym for unanimity.

Actually, hams began using "single channel" SSB voice transmission on the HF amateur bands in 1933. The 75 meter LSB transmitter designed and used by Robert Moore, W6DEI was described in R/9 in late 1933 and early 1934. This transmitter was quite sophisticated, generating the SSB signal at 10 kc. and heterodyning it twice (using balanced mixers) to get to 75 meters. There were a handful of west coast amateurs "on the air with single sideband" back in those days.

Dig up QST for 1935 and see what Jim Lamb has to say about SSB, too.

Of course the big push began with articles by W6QYT and others in the late 1940s describing how to build and use SSB exciters.

But the point when SSB gained the upper hand over SSB was in the late 1950s and early 1960s, when the introduction of SSB transceivers and matching transmitter-receiver pairs made SSB easy to use, compact and in many cases much cheaper than AM.

Who manufactured the first amateur "all band HF" (that means 80/40/20/15/10 meters back then, folks) SSB transceiver?

So you think Carl and I have learned nothing in the last 5 years? Hams are
supposed to be about experimenting, Dick. Why are you so anti-experimentation?
Haven't you ever experimented with anything, enjoyed doing so, and learned
something from it? I learn something new at least monthly.

I think what Ed is suggesting, Dick, is that you follow one the teachings of the
Bible, i.e. Remove the moat from your own eye before complaining about the speck
in someone else's eye.

Nope, Cecil and Carl will never be happy until all avenues for advancing
the state of the amateur radio art have been explored. Sorry you disagree.

If my ideas above are the rant of a horses ass, then what sort of rant are your insults and name calling? My notions are certainly fair game for disagreement, but I don't think they qualify me for the title "horses ass".

The hypothalamus is one of the most important parts of the brain, involved in many kinds of motivation, among other functions. The hypothalamus controls the "Four F's": 1. fighting; 2. fleeing; 3. feeding; and 4. mating.

Please go mate yourself.

With all kind wishes,

de Hans, K0HB

But RM-10413 is a synonym for "shabby ARRL effort".

I count W3KD as a friend, but his persuasive talents and reasoned thought processes are not evident in this petition. In all fairness, I guess he had to work within the confines of his tasking document. A pity.

73, de Hans, K0HB

PS: Examine the range of comments on RM-10413 at the FCC site, and see if you can find anything that remotely resembles consensus. Good luck on this one now.

That's a pure NAVY acronym, mister chief. "Commanding General,
Strategic Air Command" would be appropriate. There's only one
"Commander IN Chief" in the USAF...or the Army...and that is the
President of the United States.

>> Neither you nor I will know of the possible alternative futures at

>> to "prove" any point.
>
>Proves my point just as well as your own statement of the same construct
>*your* point, Old Organ Grinder.

No, it doesn't prove a damn thing, chiefie. You want mythology to
be a FACT when it is only part of the history.

If you look back at the time line (which you have not), you would
have found another corporation got a development contract for
single-channel SSB voice. That was RCA. RCA never made any
"popular" amateur radio equipment that spawned legends and
myths. Collins did...rather pricy equipment at that. The legends
stood Collins Radio good on being able to sell HF SSB goods.
They easily recouped their design and development costs from
the high prices (inflated to make them money).

For all the tales of altruistic do-gooderism supposedly done by
the Collins Radio legends, Collins did well on charging so much

on their ham gear. Hams readily forked over the cash, making
money for Art and company. The legends no doubt helped
all their government contracts later.

Collins Radio hasn't made any amateur radio equipment for years.
It is now a division of Rockwell International.

>Good luck on this one now, and don't grind your organ so fast -- it's hard
>on your heart.

No problem. Arguing with you on any subject doesn't even raise
the beat to 85. About as much effort as picking up some scrap
on the floor and dumping it in the wastebasket.

Since you haven't objected by yet-another lesson in the REAL
history of radio modes, I'll have to conclude you had to concede
and accepted it.

Wear your life jacket when taking out your power boat. You aren't
as young as you think you are.

Another fine example of how FLAT WRONG the Old Organ Grinder can be when he does shoddy research.

Air Force Gen. Russell E. Dougherty, quoted on an official US Air Force PR site (http://www.af.mil/news/Jul2000/n20000720_001099.html) says "LeMay served as CINCSAC from 1948 to 1957". That sort of makes it seem to be a USAF acronym.

But since SAC has long been replaced by STRATCOM, (CINCSTRATCOM in charge) consider the following current examples of non-USN acronyms in the CINCxxxxx format, to put the lie to your "pure NAVY acronym" claim.

The official online biography of ARMY General Tommy R. Franks at http://www.centcom.mil/who_we_are/bio_cccc.htm says he is "is the Commander in Chief, United States Central Command, MacDill Air Force Base, Fla."

That title is abbreviated "CINCCENT" at http://www.dtic.mil/doctrine/jel/doddict/acronym/c/

Other non-USN "CINCxxx" acronyms found at that OFFICIAL DOD site are:

CINCUSAREUR = Commander in Chief, United States Army, Europe
CINCAFLANT = Commander in Chief, Air Forces Atlantic
CINCARLANT = Commander in Chief, Army Forces Atlantic
CINCNORAD = Commander in Chief, North American Aerospace Defense Command

Here are more gleaned from other official US military web sites.

CINCSTRATCOM = Commander in Chief, US Strategic Command, Offutt AFB, NE
CINCEUR = Commander in Chief, US Forces, Europe, Stuttgart-Vaihingen, Germany
CINCSOUTH = Commander in Chief Allied Forces, Southern Europe
CINCSOUTH = Commander in Chief, US Southern Command, Quarry Heights, Panama

CINCUSACOM = Commander in Chief, US Atlantic Command, Norfolk, VA
CINCSOC = Commander in Chief, US Special Operations Command, McDill AFB, FL

Damn, don't you just hate it when someone ruins your perfectly good "facts".

With all kind wishes,

de Hans, K0HB

>
>There is an exact indication of where the $90k is spent, Len. Try reading it
>again. It goes to the firm that helps ARRL lobby congress.

That's a literal, word-interpretation statement, not an answer.

In the same mode, you should have corrected "congress" to just
plain "government" in another's posting. You did not. Ergo, you
are being defensive and aggravating.

NO ONE out beyond the ARRL and Chwat and company "knows"
EXACTLY how $90K+ is spent in lobbying efforts/expenses. THAT
was the major point of my comment. Federal tax returns do NOT
have to be detailed down to individual items or to information that
could possibly be prejudicial to any organization's motives. They
only have to be detailed enough to satisfy the IRS.

NO ONE outside the immediate confines of the ARRL knew
anything in terms of dollars spent or efforts directed towards
government lobbying efforts on behalf of amateur radio by the
ARRL...until those "copies of IRS tax forms" were made
available on a website.

["copies..." in quotation marks since there is no guarantee that
those are genuine...one can only suppose so on the basis of
stamp markings on the document copies...and it is unlikely that
they are some elaborate forgery requiring considerable effort to
manufacture]

>>More likely it is activities concerned with the FCC, not congress.
>
>Wrong guess. Most of Chris Imlay's work for the League is related to the
>FCC. About half of mine is.

That is interesting detail information, however phrased in a somewhat
aggravating tone.

NO ONE outside the immediate confines of the ARRL and its
contracted services KNOWS the detail or even knew the detail
and amounts of monies spent until those tax forms surfaced.

>>It seems unfortunate that details aren't or won't be forthcoming.
>
>They are not forthcoming to those that don't see them, Len. There have been
>more stories on ARRL's work with the FCC and Congress than I can list.

Then Ed Hare fails to understand the perception of others who
are outside the ARRL headquarters operations.

The ARRL reports something the ARRL did. The source of this
information is from the ARRL over its own "media" outlet, the
ARRL website and ARRL publications.

There is NO corroboration from a disinterested party as to the
truth of what the ARRL says the ARRL did. Everyone must take
the ARRL's word on nearly everything it does. It is a BELIEF
system.

Pardon us ordinary folks not privy to ARRL insider information,
but the ARRL as an organization is not to be taken as a paragon
of truth and honesty. Since it is partly a political organization
then ordinary folks have to judge its statements as "standard
political phrasing." That is, it has the power to control and bias
its own reporting of what it does and what its aims are...

>>The "it's none yer business" sort of answer on
>>what the league does is not a good one.
>
>I wonder if you can cite the "none of yer business answer you are claiming
>you got when you asked ARRL the question. Who gave it to you?

The ARRL as a group, and as individuals who are insiders in the
ARRL have repeatedly made the inference that the ARRL's
cause, doings, honesty, and nobility are all above reproach.
It's part of the BELIEF system schtick common to all political
organizations. Ed Hare did that, de facto, in the opening of his
aggravated reply to my original message by trying the very
literal interpretation of "where $90K+ monies were spent."

>Looks like more Anderson anti-ARRL propaganda to me. :-)

As an ARRL insider, Ed Hare seems very sensitive to apparent
fault-finding to anyone raising certain points on documents that
have not been made available to the general public. That is
Hare's problem, not mine.

In a free society ALL should have the freedom to bring up
certain observations on documents never before seen by the
public. The journalism media does this on a regular basis
concerning political parties and individuals engaged in politics.
The ARRL is partly a political organization, public in exposure
although private in organization, and declared non-profit (legal
term for tax purposes). They are NOT exempt from criticsm,
positive or negative.

>>Is this another of those "it's none yer business" answers?
>
>I didn't see a question, Len -- just typical Anderson pontification. If you
>ask me a question, I will answer it, if I can.

I wrote a "question" in a direct copy of the Hare "question" mode.

The question mark at the end of a sentence denotes the sentence
as a question. Questions are simply questions. Questions may
be rhetorical (as to be answered later by the questioner) without
any answer necessary or the questions may be ignored. Readers
have that choice.

>>[Counselor Troi senses pique and aggravation...red alert!]
>
>At least you are willing to admit that you are an aggravation.

Aggravation is a subjective thing. Demonstrations of aggravation
are common to those whose cherished belief systems appear to
be threatened by another. "Pique" may be classified as very
low-level aggravation.

A closing wry comment is often used as a humorous "dig" at
others, not myself. It seems blatantly obvious that Hare was
piqued and probably aggravated by my previous comment. No
doubt many others have felt the same, to various degrees.
Judging from an occassional comment by a "non-regular," it is
also obvious that others share the same criticsm of the ARRL.

The ARRL does not share any sacrosanct position, that of
being above reproach. It would do well for its employees to
recognize that fact and not exhibit such pique and/or
aggravation towards critics.

A sampling is just a sampling. There are statistical rules to establish accuracy and efficacy in sampling percentages. I did not enumerate any rules of statistics on my mention of "sampling."

It would do well for Hare to stop demonstrating pique and aggravation on perceived negative criticsm of the ARRL or of certain "regulars" in this newsgroup. All are in the public view. NO ONE is exempt.

Asking rhetorical questions (a standard Hare response) is NOT any sort of answer.

Yes, it is. However since no one here, especially YOU, is qualified to determine how the demographics of the NG are dispersed, it's absolutely impossible to make ANY determination as to what, if any, representitive sampling might be accurately made.

>An observation of that sampling indicates a strong propensity to...(SNIP)

Opinion, Lennie...at the MOST you can offer is an opinion. Every day this NG see's new posters, and there is no way anyone can make anything close to an accurate assessment of what anyone's "propensity" is.

>>While the amateur community may not include hundreds of bona fide

>Flag-waving with just a flagpole.

Always quick to find a way to insult...Same old Lennie.

>Time-division multiplexing necessary for packet
>switching systems was already beginning in HF data (teleprinter)
>communications in the 50s. Think ALOHA as having more influence
>on "packet switching" to the industry.

Lennie, why do you find it necessary to try and "prove" something Hans
already stated as fact? To impress us with how timely you are?

>>WA4APR and friends didn't invent GPS, but they deduced a cheap
>>way to marry that technology with packet radio to come up with APRS.
>
>A good innovation but impossible without either GPSS or GLONASS.
>GPSS started with NAVSTAR, a USN program with strong looking-in
>by the USAF and US Army.

Again...trying to "prove" something he already acknowledged. That you
provide more "intimate" details is nice, but only an attempt to wrap yourself
up in your OWN "bunting"..and not very patriotic bunting at that...(You eally
should flush it after you use it, Lennie....)

>As a former member of the Position Location Engineering group at
>RCA Electromagnetic and Aviation Systems, Van Nuys, CA, in
>the 1970s, I have to state that your summation is GROSS
>exaggeration.

I am sure you read a lot of stuff from the trashcans you were emptying
while you were there, Lennie. I am sure the housekeeping staff gets to see a
lot of stuff that way.

>Investigate Terion Corporation and their new grant of HF frequencies
>for reporting vehicle positions...just made possible by the FCC.

Fine reading, I am sure, and in no way diminishes what was said earlier....You just puffed it up along the way.

>Support Your Local Legacy Mode Sheriff!

Who is bound to being doing more for radiocommunication than Lennie Anderson...now or in the past...

>not a quality item.

Another cheap shot does not negate what did transpire. SSB
radiocommunication did NOT become widespread or accepted in either Amateur or
USAF RADIO communications until the intervening of Gen LeMay and Art Collins.
This is documented in bot Amateur and USAF histories.

>Good luck on THAT one, mister chief.

You are the one with something to prove, Lennie...PROVE that he was
wrong...

Gentlemen's Agreements:

Friend of mine says that ham radio has, for as long as he could remember, always been self-policing, developing operating standards, practices and guidelines -- trusting operators to function within the bounds of common sense and shared responsibility. But now we are becoming just like the rest of society -- looking for rules and laws, not so we can obey them but, so we can find the loopholes so we can either get a jump on someone else or find a reason to make new rules and new laws.

I listened to the most amazing interplay last night on 3.865 between two crews of pre-restructured Extras. One bunch had been driven off the frequency by the second bunch grabbing the frequency early in the morning and staying on until late at night. Last night, the first bunch returned to reclaim the frequency with higher power and side-by-side contacts.

None of them were behaving like Amateur Radio Operators. It was like listening to rival groups of 6 year olds arguing over a piece of playground equipment in a public park -- with the language and manners of 18th Century pirates.

I'm afraid that's what I'm hearing in all the discussions about re-farming the Novice/Tech Plus frequencies. If you don't want to do it my way, then you are so wrong you don't belong in this service. I hope these are not the attitudes of the majority of Amateurs. I yearn for a return to consensus rather than up and down votes.

To the contrary, Old Organ Grinder, it was *you* who initiated the kitsch
with --

"CINCSAC?!?" The USAF didn't come out of the USN, mister
chief."

...and then persisted in your ill-informed challenge with --

"That's a pure NAVY acronym, mister chief. "Commanding
General, Strategic Air Command" would be appropriate. There's
only one "Commander IN Chief" in the USAF...or the Army"

Now that you've been proven hopelessly wrong, you try to beat
a graceful retreat to the tune of "Turn down your gain and don't be
so sensitive."

Most embarrassing to the Old Organ Grinder, I'm sure, but that
doesn't make him a bad person.

With all kind wishes,

Yes, and they will surpass the number of Generals sometime in 2005...
as I predicted last year... isn't there someone who will owe me a
Steak dinner over this?

> 73 de Jim, N2EY

It is obvious why many of the defeated and defeatist die-hard ilk want
to "move past the numbers"... they just DON'T LIKE WHAT THEY SEE... or
can't bear to see it.

More telling than the two-year comparison of numbers, is the trend
that has become increasingly clear over the last year... that is, the
overall ARS numbers are dropping(especially as a percent of total US
population). This is clear even from the first degree equation(for
those who can't seem to see trends from 2nd degree equations).

Just as the die-hards who tried to hold the line on 5/13/20 WPM,
created a "rubber-band effect" that eventually caused the Extra

requirement to snap to 5WPM... these same folks are now trying to keep younger people out of the Service, which will eventually cause an alarming drop in the overall numbers(due to the lopsided age demographics), thereby causing another "rubber-band effect" to occur(most likely in 2006 or 2008), leading to the implementation of a resurrected Novice class geared towards the modern digital, and post Morse-Code, era...

I think a worse mistake would be to just turn over the Novice bands to 'phone.

The "300 baud" and "1 kHz FSK" specs in Part 97 make experimentation with new
modes on HF difficult. At the same time, merely dumping all restrictions could
turn the bands into a howling mess. The middle road is to have a bit of space
where folks can try out HBIs (half-baked ideas) and see what happens. The
Novice subbands on 80, 40 and 15 are a good starting place.

Stewart,

Who are "these same folks" and how are they keeping younger people out of Amateur Radio?

Is it the ARRL which is spending a quarter million dollars on the "Big Project" to put Amateur Radio into middle schools? Is it the private and corporate sponsors who are donating those dollars?

Is it scouting program with their "Radio Explorer" posts such as K0BSA, organizing young people around an Amateur Radio theme?

Is it individuals like Valentine Germann of rrap, displaying Amateur Radio in educational facilities?

Is it the Minnesota Youth Amateur Radio Council (http://www.mnyarc.org/) promoting Amateur Radio to youth?

Is it the sponsors of the "Young Ham of the Year" award? (Rules at http://www.arnewsline.org/yhoty/yhoty2002rules.htm -- you can still get your nomination in to them before May 30th)

.... I could go on and on.....

Or is it those folks who wouldn't support your dumbed-down-FRS-like "Pony" license?

With all kind wishes,

de Hans, K0HB

>out along the lines of "On ___ we notified you of ___ and you haven't
>done a damn thing about it."

It's called "CYA". If it ever got to the enforcement/litigation stage,
the courts would ask the FCC what was done and how it was documented.

Our courts expect that we will deal with things in the most liberal
fashion, which means expending a great amount of time and effort to "encourage"
the respondent to comply with the law.

It's not enough that they already took a test in which they were supposed
to have demonstrated familiarity with the regulations of the service in which
they sought licensure...In the case of "unlicensed" entities, they are expected
to "remind" them of their responsibilities.

Cheaper, I guess, than tying up funds and personnel in courts.

Excuse me folks, but isn't ALL of Amateur Radio supposed to be to some
degree experimenters? Why do we need specific band area's just for
experimental modes?

The real problem is getting the FCC to authorize 'experimental modes' before
they become antiques.

Yes... most folks like to get PAID for their time.

The trick is to find something you completely enjoy, while getting paid reasonably well for doing it. I'm lucky enough to work on RF data links for Unmanned Air Vehicle applications.

Nowadays, my main interest in Amateur Radio is to provide Americans (who are interested in RF) a reasonable place to make a entry into the hobby and/or profession. I tend to be inclusive, rather than exclusive - and believe there should be a fairly easy way to become a ham, and strongly feel that we need to quickly replace the archaic and recently-eliminated HF/Morse-oriented Novice entry class, with something more up-to-date.

While most adults will naturally have an aversion to the "Amateur" term, most younger folks won't... and this is where we should be concentrating our enlistment efforts - at the Junior High/High School/University age groups.

All of the transmitters and receivers and many of the antennas at the old 2nd AF, 8th AF, 16th AF and SAC HQ (installed in 1959) were manufactured by Collins. The two types of transmitter in use ran 10kw and 45kw PEP. The 618T's used on KC-135's and B-52's were manufactured by Collins. All of the HF equipment I used in Vietnam was manufactured by Collins. It looks as if you've stepped in the bucket once again.

I think that "ARRL", whoever you are referring to, owes
someone an explanation, since the "ARRL" constitution and
bylaws prohibit "lobbying" efforts. Otherwise, it appears
that the Newington crowd and/or the BoD just flipped the
rank and file a bird and are going to do whatever d**n they
feel like with the membership's money.

> overall ARS numbers are dropping(especially as a percent of total US
> population). This is clear even from the first degree equation(for
> those who can't seem to see trends from 2nd degree equations).

The numbers were GROWING from September 1998 to March 2001, when US
ARS numbers peaked. Since March 2001 the total has bounced around 683
kilohams.
>
> Just as the die-hards who tried to hold the line on 5/13/20 WPM,
> created a "rubber-band effect" that eventually caused the Extra
> requirement to snap to 5WPM...

Huh? What does that mean?

FCC has been deemphasizing code testing since 1975, when they first
tried to implement a nocodetest license. Then came the end of sending
tests, multiple-choice and fill-in-the-blank options, and medical
waivers.

The R&O for 98-143 made it perfectly clear that FCC sees "no
regulatory purpose" in code testing EXCEPT meeting the requirements of
S25.5. Despite majority of comments opposing it, FCC reduced code
testing to the bare minimum they considered adequate to meet S25.5.
The next step is blatantly obvious: If/when S25.5 goes, so does code
testing in the USA. (And most of the rest of the world).

> these same folks are now trying to keep
> younger people out of the Service,

WHO?? HOW??

There are preschoolers with ham licenses and elementary schoolers with
Extras. The ARRL "Big Project" is aimed squarely at young people. K0HB
has listed a whole series of efforts aimed at young people. Locally,
there is a serious and long-term BSA-ARS connection.

> which will eventually cause an
> alarming drop in the overall numbers(due to the lopsided age
> demographics),

Been doing that for decades. I'm 48 - how old are you?

> thereby causing another "rubber-band effect" to
> occur(most likely in 2006 or 2008),

The Tech license now consists of 35 multiple choice questions from a published Q%A pool. While full understanding of everything in the test is a bit of work, merely passing it is not beyond the capabilities of most elementary school kids who are interested in the material.

There have been substantive discussions here about what the license structure and requirements should be in a post-S25.5 era. I can dig them up if you want a real discussion.

> leading to the implementation of a
> resurrected Novice class geared towards the modern digital, and post

>Well, Riley thinks he can clean up the airwaves by threatening to
>write violators more nasty letters.

For most of the violators, that has worked quite well. For those that choose to ignore them, from what I have seen, most of the cases have gone to NALs.

The FCC can issue a lot more warning letters than it can issue NALs. I don't think that enforcement would be well served if the FCC issued only NALs.

In an ideal world, ever rules violator would be instantly fined. I think that what can be done in practice is a reasonable second-best alternative.

Not to mention the sycophants and stooges.

And then there are opportunities for leadership in the positions of lead crony, stooge supervisor, consulting sycophant, mechanic vice president, etc. One has to work one's way up the hierarchy, though, by starting out as lackey associate.

How do you know they think that?

Surely a "genius" of your caliber wouldn't confuse anyone who believe that even
loder modes which have long-proven communications value are worth keeping in
ham radio believe that. You *couldn't* be that dumb ..... Could you?

The following came from K3KO -- direct contact info is included if interested.

(Incidentally, looks like they've found a way to make good use of 27MHz freqs down there -- they've turned them into ham freqs! FCC, are you listening?)

Guys,

I have been in contact several times with H44A (Sam).

In conjunction with their National Disaster Office in the Solomon's, Sam is trying to get the locals licensed.

There are many obstacles. The people of the Solomon's exist in a mostly non-cash environment. The personal purchase of anything like radio gear is out of the question.

Sam is in need to donations of ham and CB gear. In H44, nine of the CB channels have been allocated to amateur radio. CB gear is quite useable for them.

He will also welcome with "open arms" any ham from any country who wants to help out teaching (+ equipment work). Stays for weeks to months would be greatly appreciated.

This might be a great opportunity for those interested in performing international good will via amateur radio.

Sam and the director can be reached via E-mail:

lotiyates@yahoo.com

Sam is H44A and the director is Mr. Loti Yates.

UNCLE SAM wants you!

Because they badmouth hams experimenting with digital modes every
chance they get. Your postings are clearly anti-digital, Dick. Doesn't
the FCC desiring that members of the ARS upgrade to the 21st century
indicate to you that the handwriting is on the wall?

You will recall that I, as Founder of No Test International (NTI), proposed that the only qualification for an amateur radio license be a valid credit card number. Under that system, you'd know you screwed up when you got your monthly statement and found an instant payment to the FCC in response to an electronic NAL.

;-) Have a Nice Day.

The "best" theoretical solution is worthless if we can't get it.

> > I think I'm becoming convinced.

There are currently 90 comments on view at the FCC website, and the
most
recent is a few days old.

Here's what I submitted. Feel free to copy or use as a starting point:

--

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's)
RM-10413 Amateur Service Rules Governing)
Operating Privileges)
)

PERSONAL COMMENTS OF JAMES MICCOLIS, N2EY

OVERVIEW

These comments are in response to the ARRL proposal for "refarming" the
existing HF "Novice sub-bands" on the 80, 40 and 15 meter bands.

I. Discussion:

The ARRL petition does not address the implementation of new technologies by radio amateurs as repeatedly requested by the Commission in WT Docket 98-143. The ARRL petition simply proposes the elimination of the Novice subbands and their reallocation to existing popular modes, primarily analog voice and image. The ARRL polling method did not address any spectrum allocation alternatives other than possible changes to the existing subband structure.

I propose that the Commission take this opportunity to provide the Amateur Radio Service with a new incentive to try out new modes on the amateur HF bands by permitting and encouraging the use of new, experimental and nontraditional modes in the Novice subbands without the need for a Special Temporary Authority (STA).

Advances in technology, changes in the license structure and test requirements have eliminated the need for special HF subbands for Novice and Technician Plus licensees. The "Novice subbands" have outlived their regulatory purpose, so I propose they be reallocated to enhance the ability of the Amateur Radio service "to contribute to the advancement of the radio art".

II Proposal:

A. To "de-populate" the current Novice segments, I propose that all Novice
(and Technician with code credit) licensees be authorized to use Morse
code(CW) in all of the MF/HF spectrum now authorized for General class
licensees, using the current power output level restriction of 200 watts.

B. I propose that the current Novice sub-bands be reallocated for non-traditional and experimental modes such as digitized voice, digitized
image, high speed data, and other forward looking communications methods. Modes currently allowed in these segments would continue to
be allowed without restriction.

C. I propose that Commission grant broad discretion to amateurs in the technical aspects of mode use in these subbands as to modulation and
coding schemes, non-traditional technologies, and data/symbol rates.
Specifically, the current limitations on occupied bandwidth and data/symbol rate limitations would not apply in these subbands, provided the occupied bandwidth of a signal is entirely within the

experimental subband. The encoding and modulations used would be
required to be documented according to current Commission rules.
This
broad discretion would only apply within the experimental subbands,
in order to minimize interference. “Analog” voice modes
such as SSB
and AM would not be allowed in these subbands.

III. Conclusion

I have held an amateur license since 1967 and been an ARRL member
since 1968. I responded to the ARRL poll but was frustrated by the
limited options offered by the poll. In most cases I agree with the
ARRL position, but this proposal lacks vision for the future of
amateur radio. “Refarming” the Novice subbands to
experimental use will facilitate and encourage experimentation by
radio amateurs without the need for extensive rule changes or extra
paperwork, and will avoid most interference issues between users of
existing modes and experimental modes.

Respectfully submitted,

James Miccolis, N2EY

No, trout are found in lakes as well. Where I grew up the small
lakes were either pickerel lakes or trout lakes (almost never both
in the same lake for some reason). Big rivers usually had pickerel
as the best eating fish. Note that "pickerel" is the same fish they
often call "walleye" south of the great lakes.

I like to eat trout the best. Caught early in the morning, so there's
enough time for the seasoning to take before they're cooked for an
on-shore lunch. I have a piece of property on a small, very cold
spring-fed trout lake tucked up between some hills which has the best
tasting trout on the entire planet (along with the world's worst black
flies in running-water season). When I retire I plan to spend as much
time there as my wife will allow (though not in the spring). Not that
this makes me a fisherman either, I like to eat the fish but find what
you have to do to catch them not particularly interesting. Real
fishermen seem to derive such pleasure from the act to make it a close
second to sex, whether the fish are biting or not, and are hence horrified
that I sometimes listen to a walkman while doing it (the act of fishing,
not the other one).

While I agree that the Non-sequitur comic strip did seem to quite
accurately capture the essential character of Usenet, it did so in
it's usually heavy-handed, politically-correct manner. This makes
me wonder -- is it possible for *anyone* to be truly acceptable to
the so-called "liberals" today? How would a politically-oriented
but conservative comic strip fare in today's media? Can anyone
point to such a comic strip? Why does the conservative point-of-
view go virtually unrepresented in our mass media? The closest
thing I can think of as a conservative, family-oriented, comic strip
is the Family Circus, but it is so saccharine as to be annoying to
anyone with a remotely realistic worldview.

What DO the liberals want? What IS their agenda? What could
possibly appease them, other than the one thing they really
want to impose upon us, which is global socialism? Keep in
mind, in a socialist world, things like Usenet, and comic strips
like Non-Sequitur, would not exist! After all, the ruling class of
liberal elites would no longer believe that they served any useful
purpose, since THEY would now be in power!

Yes I think we do, too. You always want to change what I say into something I *didn't* say, in order to make it codrespond with your version of something you can easily criticize. I would criticize it too, if you said it!

If you truly believe that me saying that a government employee in Cross' would be sensitive to a joker like Carl yelling "Luddite!" at everyone who disagrees with his worldview of radio, is the same as saying that "the ARRL can get anything they want by threatening FCC officials" is the same, your understanding of the English language is primitive indeed. To say nothing of your understanding of the workings of government and politics.

Who on RRAP *are* you referring to now, Old Sot? Carl? I thought he badmouthed everything BUT digital. It couldn't be me, all I badmouth is Carl, you, and Ed occasionally when he gets a kink in his tail which clearly has negative effects on his reading comprehension.

As for who is actually DOING digital, as opposed to yakking about forcing all others to do it, It sure isn't you and Carl. You have the yakking market cornered.

> Your postings are clearly anti-digital, Dick.

Yeah, RIGHT. You spring near a kilobuck for a STS-for PACTOR instead of just building your own, as you insist that all us lesser mortals must do, while I busily work the soundcard digital modes SEVERAL of them, and you make such a statement SOLELY because I support the use and testing of CW in ham radio. And you still act like I'm the goat here. But the readers know, old sot. They know.

> Doesn't
> the FCC desiring that members of the ARS upgrade to the 21st century
> indicate to you that the handwriting is on the wall?

The FCC really couldn't care less what hams do. One or two *individual employee*/hams have made noises on their own. The Commission couldn't care less about what modes we use. If you believe the modes we use will save our frequencies when the right $$$$$ comes asking, you're a dreaming fool.

It sure is curious that you, Ed and Carl are the trio that seems to have problems with understanding my posts while no one else in the whole wide world seems to have any problem at all. Of course we all know why.

That's the way I remember the ads in QST. Much too pricey
for any but the most elite of the elite. There was a Babcock
rig out about that time,too, IIRC.

All I have done is suggest that digital software and DSP programming is a good
way for amateurs to experiment nowadays. You responded that we don't need any
digital experimentation and that the modes we have are good enough for the
foreseeable future. Your postings are clearly anti-digital, anti-experimentation,
and anti-progress. What are you afraid of, Dick?

Considering the average age of amateurs is constantly rising and the cost of HF equipment is beyond the average new users reach; code and for that matter amateur service as we know it will be long gone within a decade +/-.

Cecil, the biggest breakthru in digital technology is the DSP side of the house where a receiver and to a lesser extent transmitter can be dialed up more or less on cue. It has come a long way but has a long way to go as I am sure you will admit. This is intriguing, just as the Collins mechanical filter was intriguing about 50 years ago. And a DSP rig will do an ace job on CW and SSB.

And while we are at it, we can apply software to synchronous detection and realize the promise made about 50 years ago that DSB signals with or without pilot carriers can be spaced at 2 kHz and by ignoring things not identical on both sides do so without noticeable interference. The FCC would thank us firmly because it would finally put an end to FM for communications and free up gazillions of Public Safety and commercial channels without having them hop all over creation.

Try attacking a commercial FM channel as a digital signal; why not, Heathkit did it about 40 years ago and it had far better fidelity than anything Armstrong ever envisioned.

But no, you digifreaks gots to go out and attack the simplest (and cheapest, wetware is really cheap) communication method known to man because it gives you a manhood problem. BFD. Sure SSB is getting very long in tooth but its major failing is that the receiver is pretty much on its own; it is harder to process concentrated communication because it does not supply a Rosetta Stone to do much translation or auto-adjustment with. Even NTSC television envisioned that with VIR and FM used the identical sideband thing to do AFC with TV taking a few years to use the same method.

No one is really defending the status quo except the ogres that exist in the minds of some digifreaks who seem to be able to drive themselves to neurosis with no help from me or anyone else. These things are evolutionary and always have been but there seems to be a cadre of yoyos who feel called upon to build the New Jerusalem upon the ruins of the old one; and they are far better at creating the ruins than much else.

For what it is worth, I like the idea of an 'futz-mode' band in the middle of the regular bands for the same reason it made sense to put Novices there. Kept them out of trouble.

...and what do conservatives want, Larry? When capitalism is allowed
to run its course unchecked, eventually ALL of the power will be
concentrated in one individual... Yes, unchecked capitalism leads to
Monarchy(a form of Dictatorship). And, just like with a totalitarian
communist state, a totalitarian Monarchy wouldn't allow comic stips
with opposing points of view.

What we need Larry is a little more TOLERANCE of others and of other's
viewpoints. Any kind of government that is INTOLERANT of opposing
viewpoints is bad.

A noble goal, I suppose. I'm not trying to discourage you or
anything, but there is a very strong possibility that freely available
Usenet records WON'T be maintained very much longer. Hopefully, they
can be maintained for quite a few more years with a small amount of
advertising.

> You comment on the refarming petition yet?

Why? How will changing around a few HF frequency allocations help
promote the Service? I think it just shows how ridiculously petty and
out-of-touch ham radio is with the modern world.

What we need is a truly revolutionary way to allow young people to
enter the Service... a replacement for the old Novice class, if you
will. A faily simple 25 question exam which provides these folks with
a non-renewable 5 year license to operate on 1.25cm.

3005. New Novice Class Proposal

****
Proposal to FCC to reinstate the Novice license class in the Amateur Radio Service - REV B

Due to the elimination of the Novice Class license, and improving communications technologies, the Technician Class license no longer serves well as an introductory license class; especially in terms of drawing young members into the Service. As a result of license restructuring, it is now actually harder for young people to obtain an Amateur license than it was before restructuring.

In this critical era of global competition, especially in the wireless communications arena, it is essential that we provide a means for properly educating our young people in RF communications operation and theory.

Today, technologies like the Family Radio Service, Multi-Use Radio Service, high-speed telephone & cable modems, the Internet, and inexpensive cellular telephones, have overshadowed the privileges of the Amateur Radio Service, and made the requirements for young beginners to obtain a Technician Class license out of date. Additionally, the Technician Class license has now evolved into a beginning and ending point for most Amateurs now entering the service, who are mostly interested in VHF/UHF communications, rather than HF communications. Incentive licensing has virtually been eliminated.

The need for a Service dedicated to the goal of teaching young radio users proper radio operation techniques and etiquette can clearly be seen in the disarray present on the Citizen's Band Service frequencies. The fact is, the Citizen's Band has become the defacto introductory service for young people just beginning to learn to experiment with radio; yet the Citizen's Band is a very poor environment for young people to be learning in.

Therefore, it is recommended that the Novice Class license reinstated in the Amateur Radio Service, with minor modifications to requirements and privileges to reflect the today's changing dynamics in radio technology and usage; and to expressly encourage young individuals to enter the Amateur Radio Service to improve their understanding of RF communications theory and operations, provide a healthy learning environment, and encourage radio experimentation.

On VHF and UHF frequencies, the privileges and restrictions will be the same as exists for the current grandfathered Novice Class license.

New Novice Class license holders would not have any privileges on HF frequencies.

Consistent with the implementation of the No Code Technician License, in which the existing Technician Class license holders were placed in a new class known as Technician Plus, existing Novice Class license holders would be placed in a new class known as Novice Plus. Novice Plus license holders would hold all the VHF/UHF privileges of the new Novice Class license, plus their existing HF privileges. Consistent with the manner in with Technician Class license holders may upgrade to Technician Plus by passing a 5wpm Morse Code examination, new Novice class licensees will also be allowed to upgrade to Novice Plus by passing a 5wpm Morse Code examination.

The new license class would have the following goals:

1) Encourage more young people to enter the Amateur Radio Service, by providing an entry-level ARS license class that includes privileges allowing reliable short-range voice and data communications.

2) Not significantly impact existing users of the affected Amateur Radio Service frequency bands.

3) Encourage basic knowledge of radio, electronics, operating principles and etiquette among a wider segment of the general population.

The Novice license exam would consist of 25 elementary questions. Emphasis would be put on understanding the operational, technical, safety, etiquette and emergency questions that relate specifically to the new Novice Class license privileges. All questions containing calculations would contain small integer(whole-number) input values and have relatively small integer results. Novice licensees would be required to have a general understanding of Ohm's Law and Power relations. They should be required to have a general understanding of how antenna length relates to wavelength; and have a knowledge of transmitter power, antenna gain, transmission line loss, and the ability to perform a simple ERP calculation would be required. General knowledge of simple resistive circuits, and their power dissipation, would be required. New Novice Class licensees will need to have a basic understanding of digital communication methods. Consistent with the final form of the old Novice Class license examination, knowledge of capacitors and inductors would not be required.

I corrected the date. Newsline said it was Friday May 1. Friday is May 3.

Amateur Radio Newsline™ Report 1290 - May 3 2002

**

SPECIAL NOTICE TO THOSE WHO ONLY READ THE PRINT VERSION OF THIS NEWSCAST

ARNewsline™ 1290 coverage of the flight of Mark Shuttleworth, ZS-RSA, is very audio intensive. This historic meaning of this story really cannot be appreciated in a print version. We strongly urge you this week to visit www.arnewsline.org, click on the newscast number, download the MP3 file and listen to a moment in history that was made possible by Amateur Radio. Thank you.

**

Amateur Radio Newsline report number 1290 with a release date of Friday, May 3rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Mark Shuttleworth comes on the air from the I-S-S and South Africa cheers. This story is first on Amateur Radio Newsline report number 1290 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: SECOND SPACE VISITOR OPERATES HAM RADIO FROM THE ISS

South African amateur researcher Mark Shuttleworth has made his way to the International Space Station and to ham radio. Amateur Radio Newsline’s Roy Neal, K6DUE, has been following the mission and brings us up to date:

--

(STUDENTS CHEER)

MORE THAN 200 STUDENTS, IN SOUTH AFRICA, CHEERED THEIR NEW HERO, MARK SHUTTLEWORTH. THEY TALKED TO HIM VIA AMATEUR RADIO. NICE DX. ON THE FIRST CALL, THESE ARE STUDENTS IN CAPE TOWN, TALKING TO THE PASSENGER IN SPACE BY WAY OF HAM STATION VK5ZAI, IN AUSTRALIA.

(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)

MARK SHUTTLEWORTH HAS BECOME A HERO IN SOUTH AFRICA. TO QUOTE THE HEADLINES: “HE’S THE FIRST AFRICAN IN SPACE” AND HAM RADIO HAS ENHANCED THAT IMAGE.

USING ARISS -- THE AMATEUR RADIO ON THE INTERNATIONAL SPACE STATION -- WITH SPECIAL PERMISSION AND AN HONORARY LICENSE -- SHUTTLEWORTH LINED UP CONTACTS WITH HUNDREDS OF SCHOOL KIDS -- SCHOOL LEARNERS THEY'RE CALLED IN SOUTH AFRICA. HE ALSO MADE SOME GENERAL CONTACTS WITH HAM RADIO OPERATORS.

ON FOUR DIFFERENT DAYS, STUDENTS GATHERED AT FOUR SPECIAL SCHOOLS, STARTING WITH SHUTTLEWORTH'S ALMA MATER, BISHOPS IN CAPE TOWN. ALL TOLD, ABOUT A THOUSAND SOUTH AFRICAN STUDENT LEARNERS SHARED THE EXPERIENCE OF DIRECT CONTACT.

ON THE SECOND DAY SOME 300 STUDENTS GATHERED AT THE HAVENSIDE COMMUNITY CENTER IN DURBAN WERE TREATED TO SOME REAL TIME EXCITEMENT. SHUTTLEWORTH WAS NOT ON THE AIR AT THE APPOINTED HOUR! HE WAS BUSY COMPLETING A MEDICAL EXPERIMENT.

AN EMERGENCY TEAM WENT TO WORK. THEY CALLED RUSSIAN MISSION CONTROL, IN MOSCOW, NASA MISSION CONTROL IN HOUSTON, MARK SHUTTLEWORTH ABOARD THE SPACE STATION…AND THEY AWAKENED TONY HUTCHISON, VK5ZAI, IN AUSTRALIA BEFORE DAWN.

AT ONE POINT THE SOUTH AFRICAN COORDINATOR, RICHARD MILLS, WAS ON THREE PHONES AT THE SAME TIME. SOMEHOW IT WORKED AND LESS THAN HALF AN HOUR AFTER THE FIRST ATTEMPT THEY MADE CONTACT AND THE HAPPY STUDENTS CHATTED BRIEFLY WITH THEIR HERO IN SPACE.

ARISS PROVIDED TOP NOTCH GROUND STATIONS IN AUSTRALIA, SOUTH AFRICA AND THE UNITED STATES TO MAKE THE CONTACTS. ON THE AIR, MARK USED ONE OF THE ISS INTERNATIONAL CALLS, NA1SS. THE COMMUNICATIONS WERE FED AROUND THE WORLD AS A DONATION FROM WORLDCOM, THE INTERNATIONAL COMMUNICATIONS NETWORK.

MOST SOUTH AFRICAN RADIO AND TELEVISION STATIONS AND NETWORKS CARRIED THE REPORTS LIVE AND REPEATED THEM ON TAPE. NEWSPAPERS AND MAGAZINES GAVE THEM HEADLINES GALORE. IN THE UNITED STATES, CABLE NETWORK MSNBC CARRIED THE CONTACTS.

--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--

BEFORE TAKING OFF ON HIS SPACE FLIGHT, FOR WHICH HE PAID RUSSIA AN ESTIMATED $20 MILLION, SHUTTLEWORTH TOLD REPORTERS THAT HIS LIVE COMMUNICATION REPRESENTS A MAJOR TURNING POINT FOR THE IMAGE OF SOUTH AFRICAN EDUCATION. THEN MARK SHUTTLEWORTH ADDED "THIS PUTS A GROUP OF OUR SCHOOL LEARNERS UNIQUELY INTO THE GLOBAL SPOTLIGHT OF SPACE EXPLORATION."

AND THAT'S JUST WHAT HE DID, HOLDING CONVERSATIONS WITH STUDENTS WHO WON THE RIGHT TO ASK THEIR QUESTIONS IN A NATIONAL COMPETITION.
--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--
SPACE TRAVEL HAS BEEN A LIFELONG DREAM FOR MARK SHUTTLEWORTH. HE HAS SHARED IT WITH A VERY GRATEFUL SOUTH AFRICA AND IN THE PROCESS HAS GIVEN AMATEUR RADIO A MAGNIFICENT SHOWCASE TO THE WORLD.

FOR THE AMATEUR RADIO NEWSLINE, RN, K6DUE.

--

The crew's primary mission was to deliver a fresh Soyuz spacecraft to the I-S-S. This spacecraft remains available as an emergency escape lifeboat. (ARNewsline(tm))

**

HAM RADIO IN SPACE: SHUTTLEWORTH MAKES RANDOM CONTACTS

Mark Shuttlesworth was active on voice over North America from the International Space Station making random contacts. He used the standard space communications F-M channel pair 145.800 to transmit while listening on 144.490 MHz. One of those he spoke to was AMSAT North America's Frank Bauer, KA3HDO. Mark's audio was captured by Bruce Paige, KK5DO and posted to his website. Take a listen:

--
Shuttleworth: "Kilo-Alpha-3-Hotel-Delta-Oscar this is NA1SS. Do you copy us?"
(Response)
Shuttleworth: "Thaks very much for your help with the station on the ISS."
--

Shuttleworth was only been heard using NA1SS. That's a call assigned to the ISS. He's not used his honorary South African ZS-RSA callsign. According to Miles Mann, WF1F, Shuttleworth worked many stations as he flew across the United States. This included school amateur radio club KB3BRT in Knoxville Pennsylvania. More next week. (ARNewsline(tm) with audio provided by KK5DO)

**

HAM RADIO IN SPACE: SHUTTLEWORTHS SPECIAL CALL

Before his flight, Mark Shuttleworth was granted a temporary honorary ham radio call to operate from the International Space Station. And while everyone who is assigned to the ISS has some form of ham radio certification, the call, ZS RSA, is a one of a kind. Amateur Radio Newsline's Henry Feinberg, K2SSQ, tells us why:

--

According to Deon Erwin, ZR1DQ, space visitor Mark Shuttleworth received all the information in Russia's Star City, from the South African Radio League, to study for his ham radio license and he was trying to fit these studies into his busy training schedule. However, there was doubt whether Shuttleworth would actually have the time to complete his ham radio exam due to the eight months it took to learn Russian and simultaneously completing his astronaut training.

So the Oakdale Amateur Radio Club near Cape Town, South Africa, negotiated with the South African licensing authority to grant Shuttleworth an Amateur Radio license in light of the tight schedule before the launch and in anticipation of him writing the test. The authorities agreed and awarded the temporary, honorary and very unique callsign ZS RSA. ZS is the prefix for South Africa' and R S A represents the nations name -- the Republic of South Africa.

Shuttleworth’s callsign is only valid for three months. The licensing authorities did not assign a number to the callsign, as the numerals represent South Africa’s provinces and geographic locations. And in the South African licensing system no separate callsign allocation exists for space communications.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ

--

The Oakdale Amateur Radio Club is located in Durbanville, a village which is about 30 kilometers North East of Cape Town. Durbanville is Shuttleworth’s home town and where his family still lives. (ARNewsline with information from SAREX remailer)

REPEATER LINKING: IRLP SURPASSES 400

Nate Duehr, WY0X, reports that the Internet Radio Linking Project or I-R-L-P has now exceeded 400 nodes. The latest list shows the number stands at 403 installed.

The Internet Radio Linking Project permits repeaters around the world to interconnect with one another using a Linux based computer and a simple computer to repeater interface. The system is secure against non hams penetrating it because of its propriority hardware and software made available only to licensed radio amateurs. In fact, it is the only Internet ham radio linking system permitted by the Australian government.

More information is on the world wide web at www.irlp.net. Be sure to look at http://status.irlp.net and http://maps.irlp.net to see if there is an I-R-L-P node near you (WY0X)

**

HAM RADIO IN SPACE: AMSAT-NA ANNOUNCES NEW SATELLITE PROJECT

AMSAT North America has started construction of a new low-earth-orbit communications satellite. According to the groups president Robin Haighton, VE3FRH, the satellite will be similar in size to the original AMSAT Microsat design, but will incorporate all new leading edge electronics and RF technology

The new satellite will be code named AMSAT OSCAR E or Echo until launch. It will contain both analog and digital VHF and UHF FM transponders similar to those carried on the UOSAT-OSCAR 14 and AMRAD-OSCAR 27 ham-sats that are

currently in orbit. In addition, the new satellite will have the capability to host one or two other experimental payloads.

Haighton discussed the new bird at the organization's Board of Directors meeting held in Washington, DC, on April 20th and 21st. The spacecraft is now slated to be ready for launch in late 2003. AMSAT says that a number of affordable launch opportunities are being actively explored. (ANS)

**

HAM RADIO IN SPACE: KOLIBRI 2000 TO DE-ORBIT

The Kolibri-2000 Russian and Australian School Scientific Research Microsatellite is headed toward a fiery grave. Kolibri-2000, later named RS-21 was launched on March 19th at 22:00 UTC from the International Space Station and has been in orbit for the past 6 weeks. During that time Kolibri's has been sending back telemetry and digital voice recordings.

The low cost RS-21 satellite was designed for this type of short duration mission. Part of its job included analyzing particles using a very sophisticated a flux-gate magnetometer and sending that data back to Earth. But all of this will soon end as Kolibri-2000 will reenter the Earths atmosphere and burn up sometime between May 3rd to the 4th UTC time.

Since the RS-21 has solar panels to recharge it batteries, it should be able to continue to transmit data until re-entry occurs. To hear its last transmissions, keep your radio set to the satellites primary downlink on 435.335 MHz and secondary downlink on 145.825 MHz. Both frequencies operate CW and FSK and you might want to keep a tape recorder running to catch a bit of ham radio space history as the mission of Kolibri-2000 comes to an end. (WF1F, ARNewsline(tm))

ENFORCEMENT: OWNERS OF BROOKLYN REPEATER DON’T RESPOND TO FCC

The owner operators of a repeater in the New York City area have not yet responded to a letter of inquiry from the FCC and the agency wants to know why. So it has once again written to one of the pair of hams to demand an answer. The person posing the questions is Special Counsel Riley Hollingsworth, K4ZDH:

--
Hollingsworth: “We warned Thomas Batista, an operator of the KC2DDD and the N2IFU repeater -- the repeater alternately known by both of those call signs -- in Corona New York -- that we had nor gotten a response from him to our letter of February 15th. That letter concerned interference and allegations of no coordination.”
--

In earlier letters to Batista and Gerardo Arias regarding the same repeater, the FCC asked for an explanation of why the system input is on 143.020 MHz. This is a frequency not allocated for use by hams. (FCC)

**

RADIO RULES: XM & SIRIUS CONCERNED ABOUT OUT-OF-BAND EMISSIONS

The nation's two satellite digital audio radio service providers, XM and Sirius, are concerned that out-of-band signals from a variety of wireless devices. The CGC Communicator reports that the two worry that these services will eventually cause widespread interference to their program services.

Singled out as potential culprits are license-free Part 15 and 18 devices such as ISM, Bluetooth, IEEE 802.11b, home RF wireless devices, RF lighting, ultra-wideband devices and even Family Radio Service transmitters. The fifth harmonics from Channels FRS channels 8 to 14 fall within XM's passband but not Sirius's. More information is found at the FCC website under ET Docket 01-278, RM-9375 and RM-10051. (CGC Communicator)

SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Its time once again to hear from our support fund administrator. Here’s N6TCQ.

--

In the month of February we heard from The Montgomery ARC of Gaithersburg, MD; The Kanawha ARC of Charleston, WV; Michael Leahan, N9PQK of Sun Prairie, WI; Jay Underdown, W0PS of St. Charles, MO; The DuPage, IL ARC; Russell Lamb and the South Texas Amateur Repeater Society of Harlingen, TX, WH8H; The Steamboat Springs, CO Amateur Radio Association; regular contributor William Walters, WA2IBM of San Jose, CA.; The Kings ARC of Armona, CA; David Estrada, KD6HDX and the INLANDARS repeater system of Chino Hills, CA and the Xerox Amateur Radio Club in El Segundo, WD6CZH.

Thanks to everybody for their support. A reminder that Newsline is a 501c 3 and a California non-profit corporation; all contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066. If you missed it, it will be given again at the end of this week's newscast.

I'm Andy Jarema, N6TCQ.

--

Also, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award closes May 30th. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org. (ARNewsline(tm) Support Fund)

**

EMERGING TECHNOLOGY: AUTOMATING NEWSLINE

Fred Vobbe of the National Radio Club D-X Audio Service says that he is now playing Amateur Radio Newsline automatically on his repeater. Fred says that he uses Echo Station software to automatically play this newscast every Saturday and Monday night at 7 P-M over his W8HDU repeater.

Fred’s machine operates 443.625 and is located in Allen County Ohio. More on Echo Station automation software is on the word wide web at www dot westmountainradio.com and click the link on the right side of the page that says Amateur Radio soundcard software presentation. (W8HDU)

**

EMERGING TECHNOLOGY: CALL 511 IN UTAH FOR TRAFFIC INFO

Travelers in Utah have a new way to get updates on traffic, and they can do it without having to watch television or listen to the radio. Instead, using a cellular phone, they can dial the nation's first voice-activated 511 travel service line.

Called Tellme, this is one of several free, voice-activated services known as voice portals.' Voice portals use speach recognition software to retrieve and translate information from the Internet. Taking their cues from spoken words, the services can dispense stock quotes, horoscopes, driving directions, sports scores and other widely sought information over any telephone.

Utah was one of six states selected to launch a 511 service after the Federal Communications Commission officially designated 511 as a nationwide number for travel information back in July 2000. Like the emergency number 911, the 511 systems are a public service and free. (Road Routes)

**

INTERNATIONAL: UK ANNOUNCES INTERMEDIATE LICENSE CLASS PLANS

The United Kingdom’s Radiocommunications Agency has announced details of the qualifications and examinations for the revised licensing structure for that nations Amateur Radio service.

A press release from the Radiocommunications Agency says that a new program of study for the U-K Intermediate license will be introduced early in 2003. This will be based on the current Novice syllabus but will exclude those topics covered in the Foundation License. The Radiocommunications Agency says that it plans to announce the course outline at least three months ahead of its introduction. It will be run initially as a pilot format similar to the Foundation pilot. Once the new syllabus is in force, a pass at Foundation level will be a pre-requisite to sitting the Intermediate Class U-K exam.

The new licensing structure was announced in September 2001. It’s first phase was the introduction of the Foundation License last January. This new ticket has been deemed to be a major success with over 1500 M 3 prefix Foundation Licenses having been issued. (RSGB)

DX

In D-X, what is believed to be the first 2-meter random meteor scatter contact has been made between Australia and New Zealand. Rex Moncur, VK7MO, in Hobart and Bob McQuarrie, ZL3TY, in Greymouth, on the west coast of the south island of New Zealand, made the contact on April 13th over a distance of 1950 kilometres using the W-S-J-T software. (Q-News, RSGB)

A bit lower in frequency, HC8N reports that the new QSL Route to him is Randy Becnel, W5UE, at Post Office Box 170, Kiln, MS 39556-0170 in the United States. Bechnel replaces Derek Wills AA5BT who is stepping down after 10 years of service and 50,000 QSL requests answered. (Various DX publications)

Also, Dennis Hanley, G3YVY, says that he has been informed that his callsign is being used on 20 meters. At present Dennis has no High Frequency equipment and says that has no immediate plans to become active on the H-F bands. (RSGB)

**

THAT FINAL ITEM: USA ARDF CHAMPIONSHIP WINNERS ANNOUNCED

And finally, who's the best in the country at finding hidden transmitters? Here's Newsline's Joe Moell, K0OV, with the results of a contest to find the answer, and an opportunity for your club to get in on the fun.

--

USA has just completed its second national championships of on-foot hidden transmitter hunting, also called radio-orienteering and ARDF. The event took place near Pine Mountain, Georgia, hosted by hams in the Georgia Orienteering club. Primary organizers were Laurie Searle KG4FDM and Sam Smith N4MAP. About two dozen of our country's best fox-finders went into the deep woods of Franklin D. Roosevelt State Park, trying to be first to find up to five transmitters and then navigate their way to the finish line. Their rewards: the possibility of a medal and a place on our country's team going to the ARDF World Championships in Slovakia this coming September.

The championships included two complete courses on consecutive days, the first on two meters and the second on 80 meters. Best performance overall was by Gyuri Nagi KF6YKN, who averaged 19 minutes per fox on two meters and an amazing 15 minutes per fox on 80 meters. Gyuri, whose other call is HA3PA, is a part-time US resident who learned the sport in his native Hungary. He competed in M21, the prime age division, requiring him to find five foxes on a six kilometer forest course. Gold medal winning hams in other age and gender divisions were Jerry Boyd WB8WFK, Valerie Meyer KG4QWE, John Munsey KB3GK, Debbie Pendley KD5LOK, Charlie Siler KO4NO, and Jack Stump KD5OEO.

Hidden transmitter hunting is a fast-growing activity in the USA, whether on foot like these championships, or in cars full of direction finding gear and computers. It's time for your club to give it a try. The perfect opportunity is coming May 11 and 12, which will be the fifth annual National Foxhunting Weekend, sponsored by CQ magazine. The May issue of CQ has all the details. On the Web, you can find lots of information on both the National Fox Hunting W and the just-completed national Championships at www.homingin.com. That's

homingin -- one word -- homingin.com

From southern California, where every weekend is a transmitter hunting weekend, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

The next stop for the winners? Hopefully Slovakia and the world championships this fall. (ARNewsline(tm). K0OV)

SPECIAL NOTICE TO THOSE WHO ONLY READ THE PRINT VERSION OF THIS NEWSCAST

ARNewsline™ 1290 coverage of the flight of Mark Shuttleworth, ZS-RSA, is very audio intensive. This historic meaning of this story really cannot be appreciated in a print version. We strongly urge you this week to visit www.arnewsline.org, click on the newscast number, download the MP3 file and listen to a moment in history that was made possible by Amateur Radio. Thank you.

**

Amateur Radio Newsline report number 1290 with a release date of Friday, May 3rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Mark Shuttleworth comes on the air from the I-S-S and South Africa cheers. This story is first on Amateur Radio Newsline report number 1290 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: SECOND SPACE VISITOR OPERATES HAM RADIO FROM THE ISS

South African amateur researcher Mark Shuttleworth has made his way to the International Space Station and to ham radio. Amateur Radio Newsline’s Roy Neal, K6DUE, has been following the mission and brings us up to date:

--

(STUDENTS CHEER)

MORE THAN 200 STUDENTS, IN SOUTH AFRICA, CHEERED THEIR NEW HERO, MARK SHUTTLEWORTH. THEY TALKED TO HIM VIA AMATEUR RADIO. NICE DX. ON THE FIRST CALL, THESE ARE STUDENTS IN CAPE TOWN, TALKING TO THE PASSENGER IN SPACE BY WAY OF HAM STATION VK5ZAI, IN AUSTRALIA.

(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)

MARK SHUTTLEWORTH HAS BECOME A HERO IN SOUTH AFRICA. TO QUOTE THE HEADLINES: “HE’S THE FIRST AFRICAN IN SPACE” AND HAM RADIO HAS ENHANCED THAT IMAGE.

USING ARISS -- THE AMATEUR RADIO ON THE INTERNATIONAL SPACE STATION -- WITH SPECIAL PERMISSION AND AN HONORARY LICENSE -- SHUTTLEWORTH LINED UP CONTACTS WITH HUNDREDS OF SCHOOL KIDS -- SCHOOL LEARNERS THEY'RE CALLED IN SOUTH AFRICA. HE ALSO MADE SOME GENERAL CONTACTS WITH HAM RADIO OPERATORS.

ON FOUR DIFFERENT DAYS, STUDENTS GATHERED AT FOUR SPECIAL SCHOOLS, STARTING WITH SHUTTLEWORTH'S ALMA MATER, BISHOPS IN CAPE TOWN. ALL TOLD, ABOUT A THOUSAND SOUTH AFRICAN STUDENT LEARNERS SHARED THE EXPERIENCE OF DIRECT CONTACT.

ON THE SECOND DAY SOME 300 STUDENTS GATHERED AT THE HAVENSIDE COMMUNITY CENTER IN DURBAN WERE TREATED TO SOME REAL TIME EXCITEMENT. SHUTTLEWORTH WAS NOT ON THE AIR AT THE APPOINTED HOUR! HE WAS BUSY COMPLETING A MEDICAL EXPERIMENT.

AN EMERGENCY TEAM WENT TO WORK. THEY CALLED RUSSIAN MISSION CONTROL, IN MOSCOW, NASA MISSION CONTROL IN HOUSTON, MARK SHUTTLEWORTH ABOARD THE SPACE STATION…AND THEY AWAKENED TONY HUTCHISON, VK5ZAI, IN AUSTRALIA BEFORE DAWN.

AT ONE POINT THE SOUTH AFRICAN COORDINATOR, RICHARD MILLS, WAS ON THREE PHONES AT THE SAME TIME. SOMEHOW IT WORKED AND LESS THAN HALF AN HOUR AFTER THE FIRST ATTEMPT THEY MADE CONTACT AND THE HAPPY STUDENTS CHATTED BRIEFLY WITH THEIR HERO IN SPACE.

ARISS PROVIDED TOP NOTCH GROUND STATIONS IN AUSTRALIA, SOUTH AFRICA AND THE UNITED STATES TO MAKE THE CONTACTS. ON THE AIR, MARK USED ONE OF THE ISS INTERNATIONAL CALLS, NA1SS. THE COMMUNICATIONS WERE FED AROUND THE WORLD AS A DONATION FROM WORLDCOM, THE INTERNATIONAL COMMUNICATIONS NETWORK.

MOST SOUTH AFRICAN RADIO AND TELEVISION STATIONS AND NETWORKS CARRIED THE REPORTS LIVE AND REPEATED THEM ON TAPE. NEWSPAPERS AND MAGAZINES GAVE THEM HEADLINES GALORE. IN THE UNITED STATES, CABLE NETWORK MSNBC CARRIED THE CONTACTS.

--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--

BEFORE TAKING OFF ON HIS SPACE FLIGHT, FOR WHICH HE PAID RUSSIA AN ESTIMATED $20 MILLION, SHUTTLEWORTH TOLD REPORTERS THAT HIS LIVE COMMUNICATION REPRESENTS A MAJOR TURNING POINT FOR THE IMAGE OF SOUTH AFRICAN EDUCATION. THEN MARK SHUTTLEWORTH ADDED "THIS PUTS A GROUP OF OUR SCHOOL LEARNERS UNIQUELY INTO THE GLOBAL SPOTLIGHT OF SPACE EXPLORATION."

AND THAT'S JUST WHAT HE DID, HOLDING CONVERSATIONS WITH STUDENTS WHO WON THE RIGHT TO ASK THEIR QUESTIONS IN A NATIONAL COMPETITION.
--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--
SPACE TRAVEL HAS BEEN A LIFELONG DREAM FOR MARK SHUTTLEWORTH. HE HAS SHARED IT WITH A VERY GRATEFUL SOUTH AFRICA AND IN THE PROCESS HAS GIVEN AMATEUR RADIO A MAGNIFICENT SHOWCASE TO THE WORLD.

FOR THE AMATEUR RADIO NEWSLINE, RN, K6DUE.

--

The crew's primary mission was to deliver a fresh Soyuz spacecraft to the I-S-S. This spacecraft remains available as an emergency escape lifeboat. (ARNewsline(tm))

**

HAM RADIO IN SPACE: SHUTTLEWORTH MAKES RANDOM CONTACTS

Mark Shuttlesworth was active on voice over North America from the International Space Station making random contacts. He used the standard space communications F-M channel pair 145.800 to transmit while listening on 144.490 MHz. One of those he spoke to was AMSAT North America's Frank Bauer, KA3HDO. Mark's audio was captured by Bruce Paige, KK5DO and posted to his website. Take a listen:

--
Shuttleworth: "Kilo-Alpha-3-Hotel-Delta-Oscar this is NA1SS. Do you copy us?"
(Response)
Shuttleworth: "Thaks very much for your help with the station on the ISS."
--

Shuttleworth was only been heard using NA1SS. That's a call assigned to the ISS. He's not used his honorary South African ZS-RSA callsign. According to Miles Mann, WF1F, Shuttleworth worked many stations as he flew across the United States. This included school amateur radio club KB3BRT in Knoxville Pennsylvania. More next week. (ARNewsline(tm) with audio provided by KK5DO)

**

HAM RADIO IN SPACE: SHUTTLEWORTHS SPECIAL CALL

Before his flight, Mark Shuttleworth was granted a temporary honorary ham radio call to operate from the International Space Station. And while everyone who is assigned to the ISS has some form of ham radio certification, the call, ZS RSA, is a one of a kind. Amateur Radio Newsline's Henry Feinberg, K2SSQ, tells us why:

--

According to Deon Erwin, ZR1DQ, space visitor Mark Shuttleworth received all the information in Russia's Star City, from the South African Radio League, to study for his ham radio license and he was trying to fit these studies into his busy training schedule. However, there was doubt whether Shuttleworth would actually have the time to complete his ham radio exam due to the eight months it took to learn Russian and simultaneously completing his astronaut training.

So the Oakdale Amateur Radio Club near Cape Town, South Africa, negotiated with the South African licensing authority to grant Shuttleworth an Amateur Radio license in light of the tight schedule before the launch and in anticipation of him writing the test. The authorities agreed and awarded the temporary, honorary and very unique callsign ZS RSA. ZS is the prefix for South Africa' and R S A represents the nations name -- the Republic of South Africa.

Shuttleworth’s callsign is only valid for three months. The licensing authorities did not assign a number to the callsign, as the numerals represent South Africa’s provinces and geographic locations. And in the South African licensing system no separate callsign allocation exists for space communications.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ

INTERNATIONAL: UK ANNOUNCES INTERMEDIATE LICENSE CLASS PLANS

The United Kingdom’s Radiocommunications Agency has announced details of the qualifications and examinations for the revised licensing structure for that nations Amateur Radio service.

A press release from the Radiocommunications Agency says that a new program of study for the U-K Intermediate license will be introduced early in 2003. This will be based on the current Novice syllabus but will exclude those topics covered in the Foundation License. The Radiocommunications Agency says that it plans to announce the course outline at least three months ahead of its introduction. It will be run initially as a pilot format similar to the Foundation pilot. Once the new syllabus is in force, a pass at Foundation level will be a pre-requisite to sitting the Intermediate Class U-K exam.

The new licensing structure was announced in September 2001. It’s first phase was the introduction of the Foundation License last January. This new ticket has been deemed to be a major success with over 1500 M 3 prefix Foundation Licenses having been issued. (RSGB)

DX

In D-X, what is believed to be the first 2-meter random meteor scatter contact has been made between Australia and New Zealand. Rex Moncur, VK7MO, in Hobart and Bob McQuarrie, ZL3TY, in Greymouth, on the west coast of the south island of New Zealand, made the contact on April 13th over a distance of 1950 kilometres using the W-S-J-T software. (Q-News, RSGB)

A bit lower in frequency, HC8N reports that the new QSL Route to him is Randy Becnel, W5UE, at Post Office Box 170, Kiln, MS 39556-0170 in the United States. Bechnel replaces Derek Wills AA5BT who is stepping down after 10 years of service and 50,000 QSL requests answered. (Various DX publications)

Also, Dennis Hanley, G3YVY, says that he has been informed that his callsign is being used on 20 meters. At present Dennis has no High Frequency equipment and says that has no immediate plans to become active on the H-F bands. (RSGB)

THAT FINAL ITEM: USA ARDF CHAMPIONSHIP WINNERS ANNOUNCED

And finally, who's the best in the country at finding hidden transmitters? Here's Newsline's Joe Moell, K0OV, with the results of a contest to find the answer, and an opportunity for your club to get in on the fun.

--

USA has just completed its second national championships of on-foot hidden transmitter hunting, also called radio-orienteering and ARDF. The event took place near Pine Mountain, Georgia, hosted by hams in the Georgia Orienteering club. Primary organizers were Laurie Searle KG4FDM and Sam Smith N4MAP. About two dozen of our country's best fox-finders went into the deep woods of Franklin D. Roosevelt State Park, trying to be first to find up to five transmitters and then navigate their way to the finish line. Their rewards: the possibility of a medal and a place on our country's team going to the ARDF World Championships in Slovakia this coming September.

The championships included two complete courses on consecutive days, the first on two meters and the second on 80 meters. Best performance overall was by Gyuri Nagi KF6YKN, who averaged 19 minutes per fox on two meters and an amazing 15 minutes per fox on 80 meters. Gyuri, whose other call is HA3PA, is a part-time US resident who learned the sport in his native Hungary. He competed in M21, the prime age division, requiring him to find five foxes on a six kilometer forest course. Gold medal winning hams in other age and gender divisions were Jerry Boyd WB8WFK, Valerie Meyer KG4QWE, John Munsey KB3GK, Debbie Pendley KD5LOK, Charlie Siler KO4NO, and Jack Stump KD5OEO.

Hidden transmitter hunting is a fast-growing activity in the USA, whether on foot like these championships, or in cars full of direction finding gear and computers. It's time for your club to give it a try. The perfect opportunity is coming May 11 and 12, which will be the fifth annual National Foxhunting Weekend, sponsored by CQ magazine. The May issue of CQ has all the details. On the Web, you can find lots of information on both the National Fox Hunting W and the just-completed national Championships at www.homingin.com. That's

homingin -- one word -- homingin.com

From southern California, where every weekend is a transmitter hunting weekend, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

The next stop for the winners? Hopefully Slovakia and the world championships this fall. (ARNewsline(tm). K0OV)

I'm not sure; however, in our state (NY, land of the taxes), the
conservatives have cut the income tax, but not lowered spending. Where
does the money come from? Our local sales tax is 8%, now, needing even
MORE money, they have upped the taxes on NURSING homes! Nice job.

Frankly, I do NOT trust either the ultra liberals nor the reactionaries.
Both groups are fed by special interests; however, the conservatives are
much better funded - big oil, you name it. I had to laugh. For a good
while (perhaps even now), Wall Street was impressed by how few employees
generated how much money. Of course, now industry manufactures in
China,
Mexico, and many other countries. Interesting headline in this
morning's
paper - UNEMPLOYMENT HITS 6% ! Why are folks surprised? The
liberal answer would be to extend unemployment to help people
unemployed.
The conservative answer would be to shorten unemployment to 4 weeks. In
a month or so those unemployment figures would go down and everyone
would be happy! Well, almost everyone.

About the only thing REALLY protecting us, IMHO, is freedom of the
press.

Since that has failed to happen after 200+ years of a capatalistic
American society, I find your statement wholly without merit.
Indeed, there aren't even good examples on a single industry basis.

> Yes, unchecked capitalism leads to
> Monarchy(a form of Dictatorship).

Per chance you meant monopoly?

> And, just like with a totalitarian
> communist state, a totalitarian Monarchy wouldn't allow comic stips

That's my point. There's no reason that hams can't do that kind of development.
But to hear Dick tell it, to even suggest DSP software development by hams is
heresy. You'd think I had suggested slaying the Sacred Cow.

> But no, you digifreaks gots to go out and attack the simplest (and

Being for progress doesn't mean being against the legacy modes. I believe
that most present mode functions will be folded into a super digital mode
sooner or later. For instance, digital cellphones handle data as well as
voice. It's all 'ones' and 'zeros'. The electronics don't know the difference.
Incidentally, the high fidelity music stored on CDs is (heaven forbid) digital.

What is wrong with a little digital DSP experimentation by hams?

We'll see. The old deja archives only went back to 1995, but now google goes
back to 1981.

>> You comment on the refarming petition yet?
>
>Why? How will changing around a few HF frequency allocations help
>promote the Service?

The rules today make experimanting with new modes on HF somewhat difficult. For
example, all RTTY and data signals on HF must be confined to the non-phone
bands and must not exceed 300 bauds - regardless of occupied bandwidth. OTOH,
digitized voice and image signals must be confined to the 'phone subbands -
again regardless of occupied bandwidth.

Of course one can go for an STA, but that requires paperwork and time.

One way to attract newcomers is the experimental side of things. But the
present rules are not very conducive to many types of experimentation.

>I think it just shows how ridiculously petty and
>out-of-touch ham radio is with the modern world.

How?

>What we need is a truly revolutionary way to allow young people to
>enter the Service... a replacement for the old Novice class, if you
>will. A faily simple 25 question exam which provides these folks with
>a non-renewable 5 year license to operate on 1.25cm.

Your heart's in the right place, but your head misses the important points:

1) FCC wants simpler rules, not more complex ones. Selling them on a 4th
license class after they decided 3 is enough is a losing battle. Tacking on

stuff like age limits, no renewability and band restrictions (no 2 meters?) makes it even worse.

2) FCC got rid of the old Novice because there were very few of them issued for many years. For more than 15 years the Tech has been the first license of most new hams. This was going on even before the Tech lost its code test in 1991. Back then, most newcomers looked at the requirements for Tech vs. Novice, compared them to the privileges, and went straight to Tech.

3) To make any license attractive, the privileges granted must be worth the "investment". In most areas, 2 meters and 440 are where the local action is. HF is where the DX is.

4) It's pretty clear that Element 1 will probably disappear in late 2003 or early 2004, depending on when S25.5 disappears. What FCC will want from us hams is ideas on how to structure licenses in a nocodetest ham radio, not warmed-over
old stuff. Heck, there are elementary schoolers with Extras - how much easier do you want the tests to be?

How about this (assuming the code test is gone):

Replace the existing Tech with a new "Basic" license. Allows a wide selection of modes and bands - say about half the spectrum allowed to Generals, plus the most-popular modes (CW, SSB, FM, PSK31, a few others). Power limit is low to avoid lots of RF exposure questions on the test. Basics couldn't be VEs or repeater control ops - again to keep the test simple. End result is a 25-35 question test on "the basics" and the Basic ham gets lots of mode and band choices.

First, what you describe above is almost indistinguishable from the current
Technician examination.

Second, elementary school children are passing the current Extra exam with
ease, so your "dumbed-down-because-they're-babies" notion (which you've
floated here under various other names before) simply isn't needed.

With all kind wishes,

Not a damned thing if that was all that it entailed but the jolly boys at TenTec have done more for it accidentally than you guys have managed on purpose. And I think we all know that the A/D conversion is the weak spot at the moment and I would not have a clue, tho I am quite willing to concede that you might, how to engineer around that.

My real question is why all the emphasis on mode? Who gives a hoot? Things get their feet in the door by osmosis and because they work at a price. Buying a gizwidgit to plug into the mike and speaker jack to run

to a compooter at a price equal to either one is patently ridiculous. For that matter, the quest to decode morse on a compooter is right up there in the stupidity department as well.

As you point out, it is all binary anyway once you figure out how do do A/D conversion. And as you point out the CD jocks figured out how to make a speaker rattle years ago. The size of the CD was set to handle Beethoven's Third, the Eroica. So if there are hardware limitations, and doing a 21 MHz signal directly is not to my knowlege possible today, then why have we not seen more audio/i.f. DSP beyond filters for RTTY etc. I put digital detection in there for a reason, several of them in fact. The problem is quite solvable: if you can digitize a piece of spectrum you can decode it digitally even if it is analog in origin; FSK should be trivial and to top it all off, you should be able to look at a wider bit of spectrum, recognize two channels that are mutually inclusive and exclusive, narrow down the spectrum cut to maximize reception and decode the signal digitally without worrying about tuning to the right boop and beep. FM is not that hard if Heathkit could do it with vacuum tubes.

You guys are demanding the mode be set first and in fact seem to be hung up on mode. Now the two examples I gave have their decoding methods implicit in them, FSK because one or the other is on all the time and FM because, sub carriers aside, both sides of center are equal. It seems a little silly to be decoding the digital third subcarrier from the output of some variation on an Armstrong Discriminator so I can be sure I am tuned to KWWW, the Turnip Grinder now playing Elvis singing Don Giovanni or Tex Ritter doing La Donna e Mobile'. I keep hearing about software, so let us see some in the present environment. If nothing else you could decode the second subcarrier as well and make a monumental contribution to talking books for the blind.

I am not just being pissy, I am trying to show how we get from Analog Point A to Digital Point B in a market with an installed base that actually works pretty well. It is done by infiltration and performing certain tasks better than the present approach can do. At some point the issue with mode becomes moot, we go with one that fits the existing digital capability whatever they may be at the time. One does not destroy SSB, he co-opts it.

Above all, he buries the 'legacy' schtick as deep as he can digitally dig the hole. This term bothers me probably more than it should because I have seen more IT phonies try to buffalo people with it than I ever want to see again. At least to me the term 'legacy' anything makes me believe I am dealing with a gold-plated turkey. To be frank, I have never seen its use in this context convince me it isn't worse in radio.

I admit, as should be obvious, that I like approaches where the key is in the transmitted signal and where intelligence can be applied to tune and decode it to the virtual exclusion of all else. It is the only real weakness of SSB and one good reason to eat the elephant one bite at a time. The first step is to apply some intelligence period and sweat mode later.

Hans, I always thought my idea would be good, but I found a flaw.
The test would consist of two questions:

1) What is your full name?
2) What is your address?

Each question would be worth 50 points. Partial credit could be
extended if some of the spelling were incorrect, so long as the FCC
could figure it out and actually contact the person. A passing grade
would be 50% (I've seen folks suggesting that 50% should be the passing
grade, so who am I to complain?)

I even considered letting folks make their X so someone who is literate
could fill in the blanks for them, but then some enterprising soul
would license his dog or cat. Then again, wasn't there quite a bit
of call-letter hoarding folks who were licensing a ton of repeaters?
Maybe my idea is making it too tough for them. Unfair!

The flaw is this: companies couldn't make money selling Q&A manuals.
Of course, maybe someone COULD figure out a way to sell a Q&A manual
for this test. Of course, some folks would complain that the test
was too hard ...

Actually, a petition to compel enforcement of the CB "service" rules has a better chance of succeeding than bringing back the Novice amateur license as an "actively issued" class (i.e. not renewals only) - and that's still "a snowball's chance in hell...."

>>On VHF and UHF frequencies, the privileges and restrictions will be
>>the same as exists for the current grandfathered Novice Class license.
>
>Well, it *might* revive 220.

220 is dead? Maybe in your area, but not in Southern California - at least not in the places I'm at.

I'm surprised that S.T. didn't suggest that other "service" he's been attempting to promote (and spam this group with) as the new "entry level" learning area.....

Ask Gordon West about that. He managed to get a license for his cat some
years ago.

My rabbit wants a license, but due to fur, he doesn't make a distinguishing paw
print for a signature. Any suggestions for accomodation on the signature?
Perhaps he should sue the FCC for not meeting the "[entities] with disabilities
act" - after all, he THINKS he should have been a person and is therefore DNA
disadvantaged! [And yes, I am in California; the land of plentiful attorneys!]

I don;t think they had life memberships back then. As I recall, they came out about 1969 or so. And yeah, I wish I'd gotten one then!

I wonder how ARRL membership has kept up with inflation?

>Dayumn! I've been licensed 40 years? Whut hoppened?
>
Hopefully, lots of fun things!

I'm just 5 years behind ya. Almost OOTC material.

Consider this: Back then, there were maybe 250,000 US hams. Today there are about 683,000.

If we assume that just 2% of those 250,000 mid-1960s hams dropped out each year, only about 125,000 remain. Less than 20% of the total.

>>
>> Cosmophone??

You are correct, sir!!

The Cosmophone 35 appeared in early 1958, more than a year before the Collins
KWM-2. The KWM-1 preceded the '35, but the KWM-1 only covered 20, 15 and 10
meters.

The 75S-1 and 32S-1 appeared in early 1959, and were the first amateur
transceive-capable transmitter-receiver pair.
>
> That's the way I remember the ads in QST. Much too pricey
>for any but the most elite of the elite.

1958 prices:

Cosmophone 35: $799.50
Power supply: $139.50

Expensive, but actually cheaper than many other popular SSB rigs of the day,
like the Hallicrafters SX-101/HT-32 pair. Also less expensive than the KWM-2,
and the Cosmophone had more features (like dual VFOs).

> There was a Babcock
>rig out about that time,too, IIRC.

Not an SSB transceiver, though.

Like a fine wine, it get's better with age.

Now - tell us the truth, Hans; if you had your way, we would have
NEVER had a NoCode Tech license, would we? In fact, we wouldn't have
had a NOVICE or a TECHNICIAN class license.

Yes, indeed - if Hans had his way since 1958, the ONLY way to get into
the Amateur Radio Service would have been(and would still be) to pass
a 13wpm Morse Code examination, and the General Class written
examination. Fortunately, the FCC(and even the ARRL) at times have
seen fit to ignore this ridiculous line of thought, and do the right
thing over the years.

Mark my words, when the Amateur numbers start to slide again(and they
will), the ARRL will be forced to back some kind of REAL measure to
stop the decline. Why do you think the ARRL backed 5WPM restructuring
- to stop the ongoing contraction which was obviously occuring at that
time. But, 5WPM restructuring has only provided a little short-term
relief - eventually REAL reform will be necessary.

They are really much more interesting than
the "highly sanitized" Board Meeting Minutes
and Pubicly Released Annual Financial Report.

What I would like to see is the COMPREHENSIVE
ANNUAL FINANCIAL REPORT for the ARRL !

This Document [..known in the Industry as the CAFI]
lists where every penny went to, and often to whom.
If you want to know what's really going on, don't bother
with the Budgetary Report, get the CAFR instead !!

There's been alot of exposure, and many red faces, on
the part of Local and County Governments when "Ordinary
Citizens" have gotten ahold of a copy of their State, County and Local CAFI

To SEE what I mean...go here---> http://www.cafrman.com/

Again, I would LOVE to see the ARRL's un-redacted CAFR
on somebody's website in the near future!

Not true. We are suggesting that hams experiment more. The legacy modes
have been experimented with for the better part of a century so they are
in the area of diminishing returns. It's only logical to experiment in
areas that have not been saturated with experimentation already.

Larry check out Mallard Fillmore at
http://www.kingfeatures.com/features/comics/mallard/about.htm
This is a cut and paste off the website:
"Tinsley created Mallard for what he saw as the conservative underdog.

The strip is for "the average person out there: the forgotten American
taxpayer who's sick of the liberal media and cultural establishments that
act like he or she doesn't exist," he says.

Mallard's targets include President Clinton, the National Endowment for the
Arts and champions of political correctness. "

I think all you conservatives will like this one.

I tend to agree with this, that's why I've dropped the age requirement
and renewability issues, and left the privileges the same as they were
before. Even the old Novice question pool could be reused(by simply
eliminating all the non-applicable questions).

Funny - nothing I've read on this board, and particularly nothing I
read in this thread seems to match the reality of what I hear on the
HAM Bands.

I've been an active SWL'r for 3 years and am taking the tech license
test at Dayton on the 19th.

I'm working on my code and will likely upgrade to General before the
year is out.

HF:

Filled with idiots (on voice). like the people on 3.865, 3.875, and
others up and down the frequencies. Some of these yahoo's and

good-ol-boys are listed on QRZ - and they're EXTRA CLASS!!!

I sure as hell wouldn't want children who might be interested or in whom interest might be cultivated listening to these guys. I believe the proper term for most of these folks is "lid", if I'm not mistaken. They're almost as bad as the QRMers although most are not intentionally annoying other operators.

One reason for holding off so long in getting my license was that I didn't think I'd have any real interest in VHF/UHF.

But - I knew I had to start at the beginning. I bought my 2M rig and have been listening and learning (and NOT transmitting) while I await my test and practice my code.

At least in my neck the woods, 2 Meters is *heaven*. Courteous operators, following the rules who seem to be doing the bulk of public service work.

I'm quickly losing interest in using Phone on HF - most of what I've heard is crap.

Using "CWGet", the code I listen to and try to learn from is much more like what my impression of Amateur Radio is supposed to be at its best.

My point is this: The No-Code Techs on 2M (I look up their licenses on QRZ) more fit my definition of HAMS than MOST Generals and Extra's I hear on HF SSB. In short - I pray they stay where the hell they are and never come up and infect 2M or 440.

Your proposal is yet another way of forcing code on folks who frankly appear to share my opinion and want nothing to do with HF and the plethora of cranks, freaks, and goof-offs that use phone there.

My incentive for learning code is to be able to use it for low power DX on HF. I sure as hell wouldn't waste my time with most of the so-called "real" HAMS on HF phone. Perhaps I should say I wouldn't waste my time with most domestic traffic.

Your proposal does nothing to address QRMers who buy rigs and swarm the frequencies, and does nothing to address "real" HAMS who incessantly argue with them, use foul language, and waste bandwidth.

So my plea to most Generals and Extras is, kindly stay on HF where you belong and if you code, you have my respect and I genuinely hope I have the pleasure and privilage of speaking with you soon. But please stay the hell away from VHF/UHF - from the comments on this board and the things I hear discussed on HF - many of you don't think highly of the space above 50 anyway.

And remember - YOU and YOUR practices formed my opinions in the past 3 years.

Forcing Code on good HAMS who don't want it or need it does NOTHING to
improve HAM radio - NOTHING.

Of course we would have. Did you read my recommendation to FCC which called for two classes of license, neither of which would have required Morse code? (Reproduced below.)

> Yes, indeed - if Hans had his way since 1958, the ONLY way to get into

Stewart obviously has me confused with some other person.

Please produce a SINGLE posting in which I defend Morse testing (at any speed) as a requirement for entry to the Amateur Radio service. Good luck on this one now!

Meanwhile you advance a warmed over copy of something that FCC has already dismissed (their word, not mine) previously.

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments contain proposals on reducing the number of amateur radio operator license classes, and suggestions regarding Morse testing.

I. Discussion:

The NPRM proposes reducing the number of operator classes from six to four. This reduction would be accomplished by phasing out Novice and Technician Plus classes, leaving the remaining four classes in

place. It is worthy of note that this plan would preserve the heart of the so-called "incentive licensing" plan which was implemented in 1968.

I believe that the effects originally expected of the incentive licensing scheme have not been realized in practice. There is little evidence that this scheme, now 30 years old, has produced any notable increase in the skills, operating excellence, advanced electronic techniques, or other tangible valuable difference between the operators in the various "non-entry-level" classes of licensee.

As a non-scientific but pragmatic experiment, tune a receiver to 14.350MHz. Close your eyes and slowly tune the receiver down across the 20M amateur radio band. Try to detect the "class boundaries" based on a difference in signal quality, better operating practices, or more advanced technical conversations. I think you will find no detectable difference as you transit across the frequencies which mark the boundary between General, Advanced, and Amateur Extra sub-bands. Thus it can be assumed that the expectations of the incentive licensing program (greater levels of technical and operating skill at higher license classes) have not been realized, and the incentive licensing plan can be safely abandoned as providing no significant benefit to the public interest, necessity, or convenience (PICON).

II Proposal:

A. License Classes:

If the interest of the FCC is (as stated in the NPRM) streamlining of the licensing structure, then I propose that the license classes be reduced to two classes, namely "Basic" and "Advanced".

The "Basic" license would have an entry-level test (basic regulations, safety, operating procedures, basic DC and AC electronics). Without CW endorsement this class would have full frequency and mode privileges above 30MHz, power limited to 50W output.

The "Advanced" license test would be of a difficulty level similar to the current Advanced class test, and would have full privileges above 30MHz at power levels up to 1500W.

B. Morse required for operation below 30MHz

Either license class could gain access to all MF/HF amateur radio frequency allocations (at 50W and 1500W respectively) upon passing a Morse test of 5WPM and gaining a "CW endorsement" for their operator license.

The Morse test should be "fill in the blank" or "1 minute of solid copy". Multiple-choice test formats should not be allowed.

C. Status of current licensees.

Current licensees should be redistributed as follows:

Current class	Converts to
Novice:	Basic CW Endorsed
Technician:	Basic
Technician+:	Basic CW Endorsed (Note 1)
General:	Advanced CW Endorsed
Advanced:	Advanced CW Endorsed (Note 2)
Extra:	Advanced CW Endorsed (Note 2)

Notes:
1) "Old" Technicians (who took same written test as General and 5WPM) would be "Advanced" CW endorsed.
2) Current Extra licensees could continue to have that class printed on their license in recognition of their previous status.

Respectfully submitted,

H. Hans Brakob, K0HB

I'm quickly losing interest in using Phone on HF - most of what I've heard is crap.

Using "CWGet", the code I listen to and try to learn from is much more like what my impression of Amateur Radio is supposed to be at its best.

My point is this: The No-Code Techs on 2M (I look up their licenses on QRZ) more fit my definition of HAMS than MOST Generals and Extra's I hear on HF SSB. In short - I pray they stay where the hell they are and never come up and infect 2M or 440.

Your proposal is yet another way of forcing code on folks who frankly appear to share my opinion and want nothing to do with HF and the plethora of cranks, freaks, and goof-offs that use phone there.

My incentive for learning code is to be able to use it for low power DX on HF. I sure as hell wouldn't waste my time with most of the so-called "real" HAMS on HF phone. Perhaps I should say I wouldn't waste my time with most domestic traffic.

Your proposal does nothing to address QRMers who buy rigs and swarm the frequencies, and does nothing to address "real" HAMS who incessantly argue with them, use foul language, and waste bandwidth.

So my plea to most Generals and Extras is, kindly stay on HF where you belong and if you code, you have my respect and I genuinely hope I have the pleasure and privilage of speaking with you soon. But please stay the hell away from VHF/UHF - from the comments on this board and the things I hear discussed on HF - many of you don't think highly of the space above 50 anyway.

And remember - YOU and YOUR practices formed my opinions in the past 3 years.

Forcing Code on good HAMS who don't want it or need it does NOTHING to improve HAM radio - NOTHING.

And because someone will likely respond with, "no license - no opinion", let me give a pre-emptive and friendly, "PFFFFFFT".

Thank you.

I'm not sure why you think I should stay away from any allocated
frequencies. The "space above 50" is no less the domain of Extras,
Advanced, or Generals, than it is for Technicians.

With all kind wishes,

de Hans, K0HB

The reason I would like *many* of you to stay away is clearly indicated in the rest of the message.

As I've said, I've been actively monitoring SSB Phone for 3 years and there's way too many dolts and "lids" using phone on HF.

I've never heard *anything* on 2M or 440 that I wouldn't want a youngster to hear. I sure as hell can't say the same thing for HF and I'd prefer those HAMS (so-called "real" HAMS who passed the code test) not bring their bad practices and foul language up to VHF/UHF.

Some of what I said was intended to be a bit facetious and cutting - to drive home a particular point. But ONLY some of it.

The "point' being - don't force code on good HAMS who don't need it to be good HAMS.

I don't propose to force code on anyone, but how does your "point" support your request for me to get off the frequencies above 50?

You just aren't making a very persuasive case for kicking me off those frequencies.

With all kind wishes,

I should also add that I'm perfectly well aware that VHF/UHF is used
by General's/Extra's, etc., every day and in perhaps greater numbers
than Tech or Tech Plus HAMS.

At least they know how to behave. :)

Ah...argument for sake of argument.

Fer Cryin' out loud, Hans

I'M NOT PROPOSING TO KICK YOU OFF ANYTHING.

I'm simply "requesting" that HAMS (who had to pass code) to get on HF
and who employ bad practices, foul language, etc., etc. to stay on HF
and not infect VHF/UHF with those practices.

I'm sure you're a lovely HAM, Hans and you're perfectly welcome on any
frequency you are authorized to transmit on.

If you use foul language and are a creep - I'd simply prefer you stay
away from 2M/400.

Jeez...is this clear enough?

I was addressing Stewart's proposal - not you personally.

hzzzzzzzzzzzzzzzz.

Geezus Freakin' Holidays, Stewart......

>Proposal to FCC to reinstate the Novice license class in the Amateur
>Radio Service - REV B

"Revision A" was stupid enough. This is even less thought-out.

>Due to the elimination of the Novice Class license, and improving
>communications technologies, the Technician Class license no longer
>serves well as an introductory license class;...(SNIP)

Spoken from a position of true ignorance.

>...especially in terms of
>drawing young members into the Service.

Even more ignorance, considering the popularity of Amateur Radio as
classroom projects.

>As a result of license
>restructuring, it is now actually harder for young people to obtain an
>Amateur license than it was before restructuring.

Now going from true ignorance to COMPLETE ignorance.

>In this critical era of global competition...

Snipped...Lotsa syllables...I am sure someone felt vindicated in thier
expenditure of tax dollars for your public education. Now if we can help you
develop some common sense to go with it, you MIGHT be able to do something with
it....

>Today, technologies like the Family Radio Service, Multi-Use Radio
>Service, ...

WHOINTHEHELL are you trying to kid, Stew? 14 channels of 1/2 watt uhf FM
and five channels of 2 watts of VHF- FM "overshadow" the Amateur Technician
class..?!?!

Let's see.....A weekend's worth of studying, maybe make it a week if you
want to really stretch it out, then I can use all allocations above 50mHz, up
to 1500 W of power, a plethora of modes, satellites and other operating
options, vs your 19 CHANNELS...???

Why don't you just sit outside of the FCC offices with a dunce cap on, thumb and index finger in an "L" on your forehead, and an old copy of "S9" magazine in your lap?

>high-speed telephone & cable modems, the Internet, and
>inexpensive cellular telephones, have overshadowed the privileges of
>the Amateur Radio Service...(SNIP)

Apples/Oranges. Really stupid, Stew.

>Additionally, the Technician Class license has now evolved into a
>beginning and ending point for most Amateurs now entering the service,
>who are mostly interested in VHF/UHF communications, rather than HF
>communications.

Then if that's all they want to do with it, Stew, it doesn't matter how many classes of license you would have the FCC create. If V/UHF is all they want, then what's another class of license going to do?

For those who WANT HF priviledges, they will do what's necessary. The incentive is still there. It's up to the individual to make it happen.

>The need for a Service dedicated to the goal of teaching young radio
>users proper radio operation techniques and etiquette can clearly be
>seen in the disarray present on the Citizen's Band Service
>frequencies.

"The service" itself is not going to teach anyone anything, Stew. Part 97 exisits, in part, to provide the >opportunity< for interested parties to have the resource available. It's what indivduals make of it that will make it a learning tool.

>On VHF and UHF frequencies, the privileges and restrictions will be
>the same as exists for the current grandfathered Novice Class license.

PRESENT DAY Novices let it lay fallow for a decade, Stew. It was so confining that practically no one used it.

>New Novice Class license holders would not have any privileges on HF
>frequencies.

WTF for?

>Consistent with the implementation of the No Code Technician License,
>in which the existing Technician Class license holders were placed in
>a new class known as Technician Plus, existing Novice Class license
>holders would be placed in a new class known as Novice Plus.

Great, Stew...One MORE class of license to keep up with...With your "proposal" you now have us bck up to five.

You weren't paying attention when the FCC said they want to STREAMLINE the licensing structure, were you?

>The new license class would have the following goals:
>

>1) Encourage more young people to enter the Amateur Radio Service, by
>providing an entry-level ARS license class that includes privileges
>allowing reliable short-range voice and data communications.

Absolutely contrainidcated in a class of licnese that YOU propose for
"training" . Why do you "propose" a new class of license and then throw all
sorts of restricitions on it, Stew?

>The Novice license exam would consist of 25....

The Technician class already consists of 25 questions and grants ALL
Amateur priviledges above 50mHz.

>Consistent with
>the final form of the old Novice Class license examination, knowledge
>of capacitors and inductors would not be required.

Yeah...Let's try to hoodwink the FCC into creating a new license to
allegedly "train" kids in radio electronics, then NOT require they learn about
some of the very most basic of RF theory.

Stewart, are you just doing this to get your name into the Federal
Register?

Steve

>before.

I recall this proposal being for "a 5 year nonrenewable license". I assumed age limits, which is just plain dumb of me, but the shorter license term and nonrenewability are both nonstarters.

Leaving the requirements as they were will result in the same problem as before: very few new hams starting out with Novice licenses. The difference between Novice and Tech requirements is simply too small, and the difference in privileges too great. No 2 meters and no 440? Forget it!

>Even the old Novice question pool could be reused(by simply
>eliminating all the non-applicable questions).

The current Tech is 35 questions, mostly on regs and operating practices. Do you think new hams would rather take 2 tests totaling 60 questions, or one test totalling 35 questions, in order to get all ham privileges above 30 MHz? Most will simply bypass the Novice and go straight to Tech.

And your idea does not look forward to what will happen if/when S25.5 disappears in a year or two. That's where the real action is.

So you lie even more. Nowhere have I even suggested that digital experimentation isn't a good thing, and you can't show where I did. I said it isn't the do-all and be-all that you and Candid Carl insist it has to be for all hams. Yep, that's been your thrust.

> Your postings are clearly anti-digital, anti-experimentation,
> and anti-progress.

Your (and Carl's and Ed Hare's) mischaracterizations of my posts are so dishonest that I'm quite certain the readers see through it all very clearly. How does it feel to be proven a outright liar?

> What are you afraid of, Dick?

It sure as hell isn't you, Carl nor Ed. The damage you do to the ARS is one possibility.

Stewart seems to be confusing economic systems with political systems.
Capitalism is NOT a political system. Capitalism is an economic system
that allows the ownership and control of the means of production to
reside in the hands of the citizens rather than in the hands of a
socialist/fascist government.

But all that is primarily high end audio quality today. Nice if we'd
want to transport Dolby multichannel audio, but I think the primary
goal is traditional voice akin to a telephone voice call.

> You guys are demanding the mode be set first and in fact seem to be hung

> actually works pretty well.

In most cases, it is really getting from A to D and back to A. I don't
know anyone that listens to digital. The end result is always A for
voice. Telephony uses a 64Kb channel for traditional telephone
connections. Contemporary compression techniques have lowered that
to 8Kb... and the result is still a "near toll quality" audio.

Agreed...which is what SSB did to AM.

I tend to agree. The "legacy" term seems to always apply to
equipment and systems that hang on beyond their useful life.
Some of that is driven by the marketplace in commercial
areas....it is more often driven by a staunch advocate base
in the non-commercial space.

Agree also.

Cheers,
Bill K2UNK

Precisely the situation, and it all reverts back to the fact that said individuals were never able to gain the sense of accomplishment in amateur radio they gained in their comical careers.
What that mostly means is they didn't want to do it enough to practice the code. Somehow they feel compelled to translate all their frustrations into and onto other hams who just did it. Of course, newcomers know nothing of all this, so the frustrated ones grasp the opportunity to make it all look like a "class warfare" situation when nothing of the sort is involved. How many of us old-timer Extras would have participated for years in the VET program if we didn't want any newcomers particularly Nicole Etches, to enter the hobby? I've always encouraged every new ham to go wherever they wanted in ham radio, and it was never an issue where that may have been, from remaining Nicole tech to the full load and I have friends at every level. But to further their Agenda, these louts fervently insist that we code supporters hate knockers. What we actually hate is the very destructive attitude of these very persons. It does more to destroy harmony and trust among hams than any other factor.

In Worldradio Magazine last month was a first person article by a newer ham in which she stated ".. I wound up with my Extra. (a friend) urged me to get on HF, and suddenly I realized I didn't know HOW to get on HF.."

That's where we have wound up, and it's the only real problem I ever had with the late restructuring. The practical effect was to destroy the Extra class license by making it possible to obtain with Novice knowledge and skill.

Would you like to retract the multiple slams and rants that you have made against
digital experimentation for all the world to read?

> > What are you afraid of, Dick?
>
> It sure as hell isn't you, Carl nor Ed. The damage you do to the ARS is one possibility.

Your own words are what you should be afraid of. Maybe we could agree on some
statements.

1. OOK/Morse is a digital mode. Coherent CW is hard for any mode to beat.

2. Writing software is a relatively straight forward design and development path
as there is very little hardware design needed.

3. Slowly but surely, the RF world is going digital. It would be nice if
hams participated in the design and development of some of the new systems
that are sure to come.

The problem manifests itself on HF because HF allows
a small group of hams that represent the worst aspects of
humanity to get together over large distances. Hence we get
the racist bilge from a handful of "lids" who would have
no other means to stay in touch if all they had access to was
VHF. It may well be the case that there is a jerk operator
in almost every repeater coverage area, but without the
ability to garner a like minded set of "on-the-air" players,
that jerk operator has no one to share his/her garbage
with.

> I've never heard *anything* on 2M or 440 that I wouldn't want a

> Some of what I said was intended to be a bit facetious and cutting -
> to drive home a particular point. But ONLY some of it.

But your point is well noted. The major problem with hams
on the air who act as the "worst" examples of hams anywhere is
on HF.

> The "point' being - don't force code on good HAMS who don't need it to
> be good HAMS.

I don't think you need worry about that. We already
have "nocode" tech and that isn't going to change at
all. The last gasp of mandated coode testing is just
the 5 wpm for HF...and that will be gone soon.
How soon is probably in the late 2003/early 2004 timeframe.
If you are more than content with VHF, then even that
is of no concern.

What I would ask you to consider is that while the bilge of
amateurs seems to be on HF, they represent a small
minority and there are many other hams... Extras, Advanced
and Generals who detest the example that minority sets
for the rest of us to anyone that might hear them...be
that other hams, the public at large and/or the FCC.

Cheers,
Bill K2UNK

3052. Entry Level Temporary License and Program!

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-05 16:01:01 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <udakn7rr6fab6b@corp.supernews.com>
Source record: 42321

Hello, all!

In the early 1990s I was at Palomar Observatory, on
one of my three pilgramages to that astronomical shrine,
when, on the way back to the car, I happened to see
some kids in strange uniforms holding a very large and
shiney card up in the air. I saw this through the viewfinder
of my video camera and, after doing a double take, I
shut off the machine and headed over to see what was
going with this!

The group on the sidewalk on Palomar Mountain was
from France and in fact was made up of French Boy
Scouts and their leaders. They had come all this way
to participate in a contest involving other Boy Scouts
from around the world, a contest involving very large
shiney cards and Morse Code.

As I restarted my video camera, aiming it in the
direction these folks were facing, which was north,
I asked one of the leaders what they were doing.
"We're in a contest to send a message from Mexico
to Canada," he said. "The team who is fastest and
most accurate, overall, wins." Soon enough, through
the viewfinder, I could see flashes from another
mountain top, confirming reception of the team's
message. The distance? About 60 miles! My
brother-in-law, who was with me, confirmed this.
"Oh, yeah," he said, "That's XXXX peak, up toward
Palm Springs!" Hey, I was impressed!

Let me see. What does the acronym ARRL mean?
Hmm. What could be done here? Hmm. Relay.
Morse Code. Low power. Temporay license.
Contest. Kits. All age groups. Prizes. Corporate
involvement. Hmm.

But to quote Steve Martin, "This could be the dawn
of a NEW AGE! We could . . . NAAAAAAH!"

Don't give me more credit than I have coming; lots of people here can and do blow my doors off technically. What I am good at is history and money so a system, computer or otherwise, is a capital investment with all that implies. A technician with an installed base that is generating the cash flow that pays the bills who pronounces it 'legacy' is a janitor who doesn't do floors and windows and deserves precisely the same fate.

If the Newington crowd ignores the organization's own
bylaws, then IMHO the CAFR should be even more revealing.
Read their Article 12 for yourself:

"Article 12:

No substantial part of the activities of our corporation
shall be the carrying on of propaganda, or otherwise
attempting to influence legislation, and our corporation
^^
shall not participate in, or intervene in (including the
publishing or distribution of statements) any political
campaign on behalf of any candidate for public office. ...".

I read Article 12 very carefully, and I can only say that I have seen little (as in "No substatial part") attempt to influence legislation, and no participation in any campaign on behalf of any candidate for public office.

What I *do* see ARRL doing is working hard to work to advise our appointed regulators, the FCC, which is not in any sense prohibited in Article 12.

Sorry, Clay, but your membership in IODHW (International Order of Dismayed Hand Wringers) is revoked for cause. ("Cause your dump huck jeremiad is so far off target as to be laughable.")

With all kind wishes,

de Hans, K0HB

I follow most of the postings here on rrap. I cannot recall Dick, W0EX, ever writing that digital experimentation (whatever that means) was a bad thing, or that he was against it. If he "argued loud and long against it", as you say, Cecil, then I challenge you to produce the post(s) where he did so.

>> > Your postings are clearly anti-digital, anti-experimentation,
>> > and anti-progress.
>>
>> Your (and Carl's and Ed Hare's) mischaracterizations of my posts are so
>dishonest that I'm
>> quite certain the readers see through it all very clearly. How does it feel
>to be proven a
>> outright liar?

I don't know if Carl, Ed or Cecil are lying, or just mistaken.
>
>Would you like to retract the multiple slams and rants that you have made
>against
>digital experimentation for all the world to read?

Can you show us some of them, Cecil?

> Maybe we could agree on some
>statements.

Let's see what ya got.
>
>1. OOK/Morse is a digital mode.

Agreed.

>Coherent CW is hard for any mode to beat.

That depends on what you mean be "hard for any mode to beat". What are the criteria? Ease of use? Simplicity of equipment? Widespread use by hams? Speed? S/N? Bandwidth used? Immunity to interference?

I can come up with a set of criteria that make plain old AM voice "hard for any mode to beat".

>2. Writing software is a relatively straight forward design and development
>path as there is very little hardware design needed.

Disagree. It is possible to implement radio with hardware but no software. It's impossible to implement radio with software but no hardware.
>
>3. Slowly but surely, the RF world is going digital.

Disagree. RF is analog. You must define what you mean by "RF is going digital".

>It would be nice if
>hams participated in the design and development of some of the new systems
>that are sure to come.

Agreed.

So where are the posts, Cecil? Show us some - otherwise you are just blowing smoke. And show the whole post, not just quotes out of context.

I don't see the connection but I'll take your word for it.

What it does mean is that those of us with some experience if we are not to lose these guys thru a process not of their making are going to have to get over green-as-grass Extras and get them going just as Novices were got going back in antiquity.

Assumptions are kind of important. West Point in the era of most of our Civil War generals was an exercise in 'What would Napoleon do?' which was admirable so long as you had the non-coms to pull it off. When you had soldiers that were behind a plow six weeks earlier and sergeants picked on their ability to beat up the privates all you got from the intricate manuvering was friendly fire.

This ain't Kansas any more, Toto.

>Cecil, the biggest breakthru in digital technology is the DSP side of the
>house where a receiver and to a lesser extent transmitter can be dialed up
>more or less on cue.

That can be done with any combination of PLL, Fractional-N, or DDS frequency synthesizer..."dialing-up" both receiver and transmitter ("on cue" to a particular time if needed) over 20 years ago.

>It has come a long way but has a long way to go as I
>am sure you will admit. This is intriguing, just as the Collins
>mechanical filter was intriguing about 50 years ago.

Then all you are talking about is DSP FILTERING. Digital
Signal Processing can be much more than just filtering.

>And while we are at it, we can apply software to synchronous detection and
>realize the promise made about 50 years ago that DSB signals with or
>without pilot carriers can be spaced at 2 kHz and by ignoring things not
>identical on both sides do so without noticeable interference.

This has been available for years in SWL receivers found on
the shelves in consumer electronics stores.

>The FCC
>would thank us firmly because it would finally put an end to FM for
>communications and free up gazillions of Public Safety and commercial
>channels without having them hop all over creation.

What in the world are you nattering about here?

>Try attacking a commercial FM channel as a digital signal; why not,
>Heathkit did it about 40 years ago and it had far better fidelity than
>anything Armstrong ever envisioned.

It's already been done by others. Do you need application notes
of a quarter century ago to show this applied to all sorts of
demodulation?

>But no, you digifreaks gots to go out and attack the simplest (and
>cheapest, wetware is really cheap) communication method known to man
>because it gives you a manhood problem.

"Manhood problem?!?" :-)

Oh yes, "Real Men" and "Real Hams" are synonyms. "Real Hams"
work HF with CW for DX. :-)

>BFD.

Yes, such a deal you make... :-)

>Sure SSB is getting very
>long in tooth but its major failing is that the receiver is pretty much on
>its own; it is harder to process concentrated communication because it
>does not supply a Rosetta Stone to do much translation or auto-adjustment
>with.

[you are dangling sentence parts in an obscene manner... :-)]

Sorry, but there are patents that work rather well for digital
demodulation of SSB signals without any pilot carrier (the
"Rosetta Stone") for a reference. Works fine for the human
voice. Some difficulty with single sinusoids being modulation.

>Even NTSC television envisioned that with VIR and FM used the
>identical sideband thing to do AFC with TV taking a few years to use the
>same method.

You might be impressive as hell to the unwashed masses using
such acronyms glibbly...but you aren't really technically correct.
The doomed NTSC TV broadcast transmissions DO NOT NEED
Automatic Frequency Control for getting the correct channel
frequency. Frequency synthesized tuners handle that without
any AFC from any demodulator. The NTSC video is reduced
carrier level but quite enough level for demodulation AND, for
many years now has been the heterodyning source to extract
the FM sound carrier at the video detector as a 4.5 MHz FM
signal.

The Vertical Interlace period is used for other information...such
as closed-caption text.

With old-style TV and FM tuners, AFC was a nice feature to avoid
the drift of the LO. PLLs, Fractional-N PLLs, and other synthesized
frequency LOs eliminated all that Local Oscillator frequency-undrift
feedback. So much so that it is affordable in low-end consumer FM
receivers.

>No one is really defending the status quo except the ogres that exist in
>the minds of some digifreaks who seem to be able to drive themselves to
>neurosis with no help from me or anyone else.

Sorry, but the morseholics have been driving themselves further
into their deep neuroses (and quite a few psychoses, I suspect)
with the STATUS QUO "necessity" of keeping the morse test alive.

>These things are
>evolutionary and always have been but there seems to be a cadre of yoyos
>who feel called upon to build the New Jerusalem upon the ruins of the old
>one; and they are far better at creating the ruins than much else.

Then the manhood-waving morseholics have been in their Masada
on the clifftop, shouting at the world, waving their 20 WPM fists in
the air with imprecations that the Morse Masada Shall Not Fall!

The original Masada fell. The Morse Masada will fall evenually.

>For what it is worth, I like the idea of an 'futz-mode' band in the middle
>of the regular bands for the same reason it made sense to put Novices
>there. Kept them out of trouble.

Sure. Segregation. Isolation. Eliminate any interference from NEW
things that point to a "lesser manhood" on the legacy legates.

Go work some DX on HF with CW. It will make you feel better. :-)

Booooo! Some "engineer."

Sorry, in older days RF *was* IMPLEMENTED as analog.

"RF" as in Radio Frequencies is just radio frequencies.

"RF" as a term is a rather all-embracing term to define many disciplines involving radio at common frequencies.

Nowadays "RF" is IMPLEMENTED as part-analog, part-digital circuitry.

Please, if you can't get your terms correct, don't post.

The "A" is not for Amateur. ARRL stands for "American Radio Relay League." American as not Canada, Mexico, Central America, nor South America. It is the national organization for United States amateurs. But when I say "America" some slick guy like Hans comes back with "Habla..."

Heck, I've been off HF since 1969. My hangout IS 440. You'll usually find me on 444.850 in Rochester, the WB2KAO mo-chine (although I do get on others at times - often the N2HJD machine on one of its' many ports). I'll be getting back on HF though - probably next year. It would be nice if you were in the area and see what kind of a conversationalist you are. It could prove interesting.

73 from Rochester, NY
Jim AA2QA (former WB2OSP - extra ticket in 1966)

Hans, screw concensus. The ARRL needs to get a vision, then get some leadership. They only need one smart guy. Two would be nice, but one will do.

Brian/N0iMD

Dave, like the FCC licensing requirements, I tend to not submit to any and
every question simply because someone asks it.

It really needs to be relavent.

I argued for digital experimentation and Dick argued against me. That is
evidence that he is against digital experimentation.

> I don't know if Carl, Ed or Cecil are lying, or just mistaken.

If Dick is not against digital experimentation, then why does he argue so
loud and long against my support for digital experimentation?

> Can you show us some of them, Cecil?

Pick any of my postings where I advocate digital experimentation. Dick
invariably came back against it. Waste your time looking them up if you
so desire.

It is possible to use existing hardware and write new software. That's how PSK31
came into being.

> >3. Slowly but surely, the RF world is going digital.
>
> Disagree. RF is analog. You must define what you mean by "RF is going digital".

Military communications has gone digital. TV is going digital. AM is trying to
go digital. Why are you being such a horse's patootie?

Forgive me, I don't understand. I would assume we are talking a method
to put some interest back into amateur radio (at least here, in the US).
The observation may have been of French youth, but any suggestion of
what to do (at least from the perspective of within the United States),
would likely involve the ARRL. American Radio Relay League. It would
also involve the FCC (again, involving the United States). Why would
you imply that the previous poster was suggesting that the 'A' in ARRL
stood for 'amateur' rather than 'American'?

You and I were once "green-as-grass" amateur radio operators. We were not
born with our present knowledge. I had all amateur frequency/power privileges
in 1952 when I knew infinitely less than the present-day new Extras. Nothing
has changed.

Who'se upset? I simply haven't answered you because you value others
opinions who not only haven't answered, but haven't even been asked. Do
your homework before assuming that someone is upset.

> on 80 meters". You can't cheat an honest person.

Are you saying that you're hones or that I'm a cheater?

You cheat yourself by asking questions only of me, ready to declare that I
have no credibility to comment on the Novice subband refarming proposal, yet
ask no questions of your cronies, assuming that they have credibility to
spare, without proof.

> Wading through numerous reposts of old stuff to get to a comment that
> consists of "ROFLMAO" or "LOL" is tedious, too, but you don't see me
> calling the author the names I was called.

Jim, when have I ever typed ROTMGFL or LOUTL?

When have I ever called you a name?

> > Besides, I don't see you
> > asking these types of questions of your cronies.
>
> I don't know who you mean. Is there some rule that says if I ask a
> question of one person I must ask it of everyone?

Why do you assume that Ed Hare has recent Novice subband experience? Jim Bromley? Dave Heil?

OK, I'll call you a name: Hypocrite.

That's one. Start a tab.

1952 is a tad before my time so we'll take your word for it. If the Novice, and later incentive licensing in general, had any real effect it was in stretching out the qualification period to something manageable. This is, incidentally, why I would like to see a time period pass before one could VE.

But your situation is really what prevailed under the old Class A, Class B system and you had to make it work on 160 or 10 to work phone.

Maybe like a lot of things, we view the recent past as 'normal' when it is anything but. Good Point.

You seem to think that I have unlimited time to first learn Morse Code, then spend yet more of it getting up to speed on YOUR FAVORITE MODE.

>You happen to work in your favorite wallow, so that's what you want to do.

As do you, and it isn't modern technology.

> Others are free do to likewise without you haranguing them nonstop. So
stuff it
> back where it belongs.

Ditto you and the Morse Code/CW lectures.

> > The ISSUE is that too many people (like you) haven't expended the effort
> > to stay anywhere NEAR current with such technology and therefore can't
> > even begin to envision what is possible and easily within reach ... if
only
> > one has the knowledge ...

Yet Jim wants to know what my recent experience is with a 170 year old "technology" on a 50 year old subband - So that I can have "credibility." You two are like peas in a pod.

> The ISSUE is that you're a one-demensional dipshit who thinks every other
ham
> MUST be interested and involved in exactly the same thing you are. In
other
> words, you are pretty stupid.

The issue is that you're a one-demensional amateur who thinks every other
ham
must be interested and involved in Morse Code/CW exactly like you are.

> > Being so woefully lacking in relevant, useful knowledge (and it does
NOT

There is a pattern there. Dick sees the ugly old woman with a wart on her
nose. The rest of us see the beautiful young lady.

I like it, except there are a lot of people working in bargaining unit positions that seem to have excess cash laying about to throw the FCC's way whenever they want.

I didn't. He just doesn't like the word "amateur" to describe folks with a Part 97 license. And, no, you don't need to involve the ARRL in Scouting activities, as the French have proven. Besides, the ARRL has "THE BIG PROJECT."

By the way, the other Jim needs to know if you have any recent experience in the Novice subbands.

>...and what do conservatives want, Larry?

Stewart:

Well, to start, at least 50% of the ink and air time in the mass
media would be nice! Heck -- 25% would probably be all we
really need to get our message across! Unfortunately, with the
mass media wholly-owned by liberals with a socialist bent,
this is a pipe dream!

>When capitalism is allowed to run its course unchecked,

…A few people get wealthy, a lot of people get rich, and almost
everyone is able to earn a very high standard of living, without
being dependent on the government for cradle-to-grave support.
Of course, the only fly in this particular jar of ointment is that
people who can meet their own economic needs AREN'T
dependent on government, and are more likely to vote for
political leaders who tend to allow businesses to thrive by
keeping the heck out of their corporate hair.

>eventually ALL of the power will be
>concentrated in one individual...

Like whom, for instance? Bill Gates? Roight. He has ALL the
power in the computer industry. In a pig's eye…

>Yes, unchecked capitalism leads to Monarchy(a form of Dictatorship).

I thought this was 21st Century America, not Medieval Europe!
I'd sure love to watch some rich guy take over our government
and start up his own "Monarchy" here and now! ROFLMAO!!!
I'll give you a bit of advice if you want to try this yourself -- you'll
have to find a way to disarm 90 million American gun owners, all
at the same time, before it can ever happen!

>And, just like with a totalitarian
>communist state, a totalitarian Monarchy wouldn't allow comic stips
>with opposing points of view.

Probably not, but then, our theoretical totalitarian Monarchy would
have to figure out how to keep breathing with a chest full of lead
before they could disallow any comic strips!

>What we need Larry is a little more TOLERANCE of others and of other's
>viewpoints.

I have virtually infinite tolerance for other people's viewpoints. The
problem with liberal socialists is that they have absolutely no
tolerance for mine! Their intolerance is the very thing that "politicized"
me in the code testing requirements debate. Don't speak to me of
"tolerance" until Rush Limbaugh is doing daily guest editorials
on the NBC Nightly News.

Yup, I definitely agree here! We somehow managed to survive
eight years of just such a government, under the so-called
"leadership" of Mr. Bill Clinton (YOU call him "President," I
sure didn't!)

Nope, it was a little later than that - Novice and Conditional. But at
14 years of age in the 8th grade, I obtained all amateur frequency/power
privileges after memorizing the ARRL License Manual. I didn't know how
to put up a dipole. My Elmer explained it to me. I didn't know about
resonance and my Globetrotter, with its link coupling, wouldn't deliver
power to my dipole. So I traded it in on a Globe Scout which had a variable
pi-net output. I didn't know what a Transmatch or SWR was. I just followed
the dip and load instructions that came with the Globe Scout. About six years
later, I started understanding the theory.

Well, I had my novice ticket back in 62, but didn't give up on the novice bands until I got off HF in 69. Although active on CW at the 40 to 50 wpm level, I did have a bunch of nice slow qsos in the novice portions of the bands. My favorite experience was giving a WN2 in New Jersey his first taste of DX. At first, he called me K2AAY. After repeating the call (understand, he copied my name and other parts of the qso fine; he just didn't understand that his signal could be copied more than a couple of hundred miles away), he called me K6AAY and was quite excited about working California. Finally, I had to send (in CW) that he was talking to Guam and my call was KG6AAY. His fist then became VERY difficult to copy. I can appreciate how he felt as I had been in his shoes before. It was a lot of fun; unfortunately, I got out of amateur radio around 1982 and didn't get back in until 1993. I'm still working on getting up on HF (more than just a money thing, I now live in the city and space is at quite a premium). I've been on 440 since 93 and will eventually get back on HF. BTW, when I saw 'Fantastic Voyage' some years back, I found CW was still fairly easy despite not having copied Morse in some years. Writing a couple of CW programs also didn't hurt and from what I've heard with CW programs, I doubt I'll have too much trouble at 25 or 30 .... give me a couple of months and it should be back to a respectable speed.

I've listened and used HF SSB for more than 2 years now and I
have heard very little "bad" stuff. Like less than 1% of all QSOs.
I'm discounting "newbie" errors. A newbie learns to avoid errors,
a lid never does.

Used to be, in LA there was a bad operator repeater on 147.435
W6NUT IIRC. Heard Riley H. is on that case now and trying
to get it cleaned up.

Only thing is that an idiot in Fartsburg Kentucky can be heard
for thousands of miles on HF, but only locally on VHF and UHF

Did anyone hear of the new proposal??? Anyone who passes the code test (at any level) must stay in the code portion of the bands, and also can only use morse code. No digital, no voice, nothing but code........ Overheard this at a hamfest this weekend.

I still think we need to take back that band. Although apparently the rules state we cannot use our identifying callsigns, but can you imagine if a ton of people started operating there (fully in compliance of the rules as they otherwise stand) and ID'ed, and operated in an above-board professional manner? Might actually have a positive effect.

Ryan

Like the FCC really cares? The AA6TK/W6NUT repeater has been a problem for over 10 years. The only reason why the Southern California amateur community allows it to happen is because without it, all the misfits would be plaguing all the other repeaters. This way, they can merrily jam each other and leave the rest of the repeaters alone.

I would NOT be surprised one bit if the FCC got sued over having taken 147.435 off the air (should it do so) - especially as a result of all the misfits jamming all the other repeaters as a result. I'm certain that some sort of class action suit by the other repeater owners as to the capriciousness of the FCC [selective enforcement] action by not addressing the problem operators themselves (thus leading to "harm" of their own systems), not just the repeater where they congregate, would occur.

You obviously haven't lived in Southern California.....

At one time, some who ONLY listen to 147.435 were making bets on the average number of violations per MINUTE over a period of time, and some guesses were exceeding 10. Each "swear word" counted as a separate violation (and those counted since occasionally the "435" group did include someone under the age of 18).

Your strategy is to wear people down by having them waste a lot of time digging up old postings only to have you nickpick them to death and deny what was said. Been there, done that, no thanks. What does it tell you that everytime Carl or I mention hams doing digital experimentation, Dick jumps on us with all four feet? Everyone who has been following these postings is free to make up his/her own mind. Those without your particular set of blinders will see things objectively. Here's just one example of Dick's response to my suggestion that hams experiment with digital modes. Ed seems to be able to read it OK.

> Well, there you have it.

There you have what? That he wants to see just as many hams experimenting with digital radio as there were hams experimenting with SSB in the 50s? Why is that a "there you have it" sort of thing to you?

> You don't even know what you're saying.

Are you really faulting Cecil for wanting hams to experiment with DSP to easily implement digital techniques while you are using the DSP software for soundcards written by others to do your own experimentation?

Is this another "do as I say, not as I do" sort of things?

> Sure, lots of hams who can find LOTS of time and have the aptitude to learn
>the basics of DSP might benefit marginally from time spent with a
> evaluation board. LOTS of time.

Sure, good things sometimes do take lots of time. I spent lots of time learning antenna modeling -- I learned a lot in the process. I spent a lot more time

learning about RFI -- I think we can safely say that Amateur Radio benefited from that. Why do you feel that a ham who learns DSP will benefit only "marginally?"

Warning

Following a coup in June 2000, the Solomons have suffered widespread lawlessness and civil strife, including armed street battles in Honiara. The two main groups in the conflict, the Malaita Eagle Force (MEF - representing ethnic Malaitans on Guadalcanal Island) and the Isatabu Freedom Movement (IFM - representing natives of Guadalcanal) signed a peace agreement in October 2000. Sir Allan Kemakeza became prime minister in December 2001 and promised to restore peace and prosperity.

But the violence continued, and Australian-led peacekeepers stationed there to help implement the peace agreement left in early March 2002 due to deteriorating conditions. A New Zealand diplomat was murdered in late March 2002, and observers describe the current climate as 'virtual anarchy.' The war-torn Pacific nation's security situation seems to be sliding rapidly downhill. An outbreak of dengue fever and increasing numbers of malaria cases are adding to the misery.

Most foreign governments (eg, the US, New Zealand and Australian governments) have advised their nationals not to travel to the Solomons. If you do go, contact your embassy or consulate in Honiara for the latest information, in particular let them know if you're leaving Honiara.

Where do you see that? The CB rules say that use of an FCC-issued
call sign is not required, but any "ID" is permitted. The one
caveat is that you do not use an FCC call sign issued to someone
else.

>but can you imagine if a ton
>of people started operating there (fully in compliance of the rules as they

Use a non-modified non-amplified type certified CB eadio on
authorized CB channels, and ID with callsigns assigned to you.
I see no violation there.

Ohmygawd, I'm shaking in my boots! Could you be right?

Now, it is obvious that the opposite of right is left and that three lefts make a right or 3l=r. It is also clear that wrong is the opposite of right so -w=r. So this would make 3l=r=-w which means that 3l=-w. Now, since left is the opposite of right (-l=r) this would mean -l=r=-w, which playing with the math gives me l=-r=w and so left is the same as wrong (yes, I could have done this in fewer steps, but I didn't feel like doing that). Now, since l=w and 3l=r that would make 3w=r. This means that three wrongs make a right. Of course, since 3 is an odd number, this situation doesn't work out with any values for r and w except 0 which would mean that r=0 and w=0 and l=0, although the last one I don't really care about. This means that right and wrong are mathematically identical and so classifying things as right or wrong is pointless because both of them are the same. And since there is no difference between right and wrong, that would make me always right and you always wrong and isn't that one of the things rrap is all about?

In all honesty, pse give me one good reason why today's kids would want
to go thru the trouble of putting up antennas, buying (grossly overpriced)
ham gear from dealers with attitudes like the Squid character on SpongeBob
Squarepants, put up with TVI/RFI, risk lightning hitting saidsame antennas
and burning down the house etc...etc.. when for about $500.00 they can get a
brand new
Dell or Gateway P4/1.2 GHz multimedia machine and be playing
with interactive music/video/games etc over a modem or DSL.....?

Most of today's kids do not even know what a CB Radio is, let alone the ARRL,
The whole CB thing happened before they were born. Finally we had some kids
show up at last year's Field Day. They looked around for about 10 minutes and
rode off on their bikes. They commented the whole thing of a bunch of "old men"
talking on radios in a tent was "wierd". Said alot. Ham radio is obsolete guys.

Sorry.

Sorry about spoiling your nitpicky rant, but I saw those posts and
Cecil is right.

>>That is evidence that he is against digital experimentation.
>
>It's only evidence if you can prodduce the posts.

Those posts were visible on AOL, your ISP. If you have trouble
getting regular postings, contact AOL.

>>If Dick is not against digital experimentation, then why does he argue so
>>loud and long against my support for digital experimentation?
>
>You are presuming your conclusion. Produce some posts.

What kind of posts do you desire? Wooden? Metal? Vinyl-
coated metal? If you need lots of posts, contact your local
builder's supply or stores such as Home Depot or Lowe's.

>I have read them and I don't see Dick arguing against experimentation
>anywhere. Maybe I missed it . Produce some posts and show us.

You missed it. Try contacting AOL Member Services via the
"keyword" button.

>You still need the hardware.

Are posts hardware? Or are you just stringing barbed wire on
messages?

>We're not the military.

No? You and others have argued that you are "in a service."

You are not a "serviceman?"

>Do you know anyone that has a "digital" TV? Do YOU have one?

We do. Works fine. Lots more channels than analog-TV in the
same bandwidth.

>Show us some posts to back your claims, Cecil.

Are you sure you aren't an actor? Sounds just like some SS man
at a train depot in those old black and white WW2 prop films,
"Show your papers!"

I have to admit that those tailored long leather overcoats looked
sharp. Are you wearing one when demanding those posts?

>Otherwise you are simply blowing smoke.

Smoking is supposed to be bad for you. When erecting all those
wooden posts it might be a fire danger. Please don't put anyone
in danger.

>Your excuses and name calling simply convince others that you don't
>know what you're talking about.

Produce some posts showing Cecil making excuses and name-calling.

>I suspect that you know there is some truth in what W0EX actually says. And
>that truth scares you silly. Thus all your evasion.

W0EX scares lots of folks, silly.

Remember that he was using "store-and-forward" ASR28 paper tape
before you were old enough for your first license. That's a techie
breakthrough. For W0EX.

Produce your own posts. We can dig it.

>George
>W3GEO

One can glean a lot of data on organizations by looking at the
normally-public data as you state. What is interesting in the
federal tax forms is information on salaries and number of
employees for a given year. The "top five" paid employees and
all the officers are duly listed. From that, one can infer
approximately what the salaries are for the other 106 paid
employees. Salary information is normally kept out of
the public eye...including the employees.

Judging from the amounts listed, the statements of altruism
and noble self-sacrifice for some cause seems a bit hollow.

The "Residence Radio Club" of an important official comes to
mind. :-)

>Sorry.

Some of your points are well taken, but much of what you've said is
simply untrue:

Ham Radio equipment, while much of it is pricey, is no longer (and
really never has been) "grossly" overpriced. Antenna systems are as
cheap as they've ever been.

A trip to EBay and a little background can net a pretty good deal.

Check out the used gear at Univeral Radio. I will admit however, that the "staff" at Universal ranges from good to bad salesperson-ship.

TVI/RFI - stay off 6M ;)

Spend a little more and turn that dandy new PC into a dandy new HAM set.

Ham Radio is FAR from obsolete. While its great to get kids involved, many won't until young adulthood. There is no end to what is possble in HAM radio regarding communication via portable/mobile gear that simply cannot be accomplished from a keyboard hooked to the Internet.

Mobile access to the Internet??? And you thought HAM radio was expensive????

I'm 40 and have been interested for years and am only NOW getting ready to take my first HAM test.

A shame also that many parents would no doubt discourage conversation between their (supervised) child and a "damn foreigner"...ah well.

But children DO take interest in HAM radio - the key is generating more interest.

"Irving's conclusions were completely untenable. I thought his scholarship was sloppy and unreliable and did not meet even the most basic requirements of honest and competent historical research." (Richard Evans, Lying About Hitler, p.70)

Jim, thanks for the info. If I read Jim/N2EY correctly, I have more credibility than you to comment on the ARRL Novice band refarming petition because my Novice experience was much more recent than yours in 1969. Anyway, I think your comments are equally as valid as mine, so Jim's is not an opinion that I subscribe to.

The Amateur's Code
The Radio Amateur is

CONSIDERATE...never knowingly operates in such a way as to lessen the pleasure of others.

LOYAL...offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally.

PROGRESSIVE...with knowledge abreast of science, a well-built and efficient station and operation above reproach.

FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance, cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit.

BALANCED...radio is an avocation, never interfering with duties owed to family, job, school or community.

PATRIOTIC...station and skill always ready for service to country and community.

--The original Amateur's Code was written by Paul M. Segal, W9EEA, in 1928.

Only after they backed a "No Change" position, then FCC said that wasn't an
option.

Dick Carrol, for one.

So far we haven't had any of them turn up here on rrap.
> How do you know they think that?

Because one legacy mode is considered to be more important than all the
other legacy modes and yet to be developed modes combined. Its a simple
inference from your past 5 years of postings.

Dick, when did the Extra exam go away? And copying a code tape at 20wpm is
no indication of HF skill. You should know that.

I'm just saying if their WASN'T an oppossing viewpoint, and capitalism was allowed to proceed unchecked, it would lead to monarchy.

I'm just as against pure liberalism as the next guy... but I wouldn't want to live in a society where business was allowed to proceed unchecked - like if Rockefeller and Carnegie were allowed to continue unchecked about 100 years ago... Things would have been much different by now.

Wow, that would get a bunch of new hams on the air!

Assuming the proposal was serious, what on earth would it prove? Lots
of us, including myself, don't have all that much interest in CW. I
support learning and testing it, but my interest is not all that much.

If there was such a thing, I know I wouldn't even be a ham.

Only the MORSEMEN, Brian...only the morsemen. Amateur morsemen regard themselves as professional. You've READ of their exploits. In HERE.

Non-morsemen have to begin at the bottom of the ladder, the back of the bus, and drink from different water fountains no matter what their experience. They tell me so and also that amateur radio works by different physics than all other radio so everyone not a morseman is a "beginner," a "neophyte," and "knows absolutely nothing about amateur radio." They tell me this.

All must begin at the bottom regardless. The long-timers need (apparently desperately) some "beginners" and "neophytes" to jump on. It makes them feel soooooo good.

Apparently amateurs didn't have sex or mating in 1928. There's
no reference to "mating oneself" as per the HANDSOME BOY
instructions. He is a powerboat owner. A vulgar boatman.

Marvelous idea. It is important to watch pioneering in the making, exploring new spectral territory, "testing the waters" to see if they are pure enough for the amateurs. That's "unexplored territory."

Is Martha Stewart a ham? She would be perfect for the job.

McCollum was born an Extra. He said so at least twice in here.
You and all others have to bear with him.

Years ago I got a demonstration of a professional programmer's recreational project of an automatically speed-adaptive morse decoder program that could handle a wide variation in dot-dash ratios. Worked fine on a less-than-50-MHz-clock PC. He just wanted to see if it could be done better than all other efforts of its time. It could.

Problem is, there wasn't any real market for it. Commercial folks didn't need it (they didn't use any morse code), the military expressed no interest (only a few other militaries use it). Long-time ham morsemen thought it an abomination before God. I brought over my little Icom receiver to his place and we put up a quickie long-wire to monitor some ham CW signals. Dull copy, nothing interesting... "code within code" of all those abbreviations.

I suggested doing a TTY converter but he wasn't interested, too "ordinary," no real challenge in that, been done in both hardware and software. He went on to other projects, dropping any further work after seeing the relative non-content of the ham communications. We couldn't find any commercial OOK CW signals off the ham bands.

He could be called "stupid" and lots of other epithets...especially if he pulled down some good bucks for making computer code (five integer dollar digits per annum...and that was years ago).

Mating comes under the heading of FRIENDLY above, at least the way K0CKB
practice it. Especially that slooooooooow and patient operating.

With all kind wishes,

Hans, she's mating herself? Perhaps she's her own best friend. Reminds me
of a song that Burnadette Peters sang on Saturday Night Live years ago.

C'mon in. The waters fine except for a few Baby Ruth's at the bottom of the pool.

By the way, how do you think I'm doing in the credibility department? I found one OT honest enough to admit that his most recent experience in the Novice subbands was in 1969. So it would appear that I have more credibility than him, according to the "What's your recent experience..." criterion.

73,
Brian

It's not his only strategy. Often he asks relatively simple questions.
When answered, no matter the answer, he can jump up and say, "Aha! You lack
credibility..., you don't have enough time in the chow hall, the latrine, or
the motor pool."

He sulks away when you don't play his games.

>Last I heard Sussex County has the biggest brassiere factory in the
>world, it ain't all bad.

Brian:

That would be the Playtex plant here in Dover, Kent County, about 1 mile from where I live! They don't make the bras here, they just produce the material they're made from, which is shipped to Puerto Rico to be sewed into the finished product. Then the finished bras are shipped back here, packaged, warehoused, and distributed.

The big industry in Sussex County is poultry. The chickens in Sussex Co. outnumber the people by at least 20 to one at any given time.

Man what fun Ham Radio is. Keep in mind I haven't even listened to CW for
over 7 years. K1B was on 28.020 with nobody coming back to his CQ's, so I
dug out a straight key I had around here for some reason, grabbed my
electric guitar cord (for the 1/4 plug) and 2 alligator clipped jumpers
and tried to send out my call sign. DA..... what's an "A"? I finally got
a AC6WD sent out (I think). What was that he sent back? Da..... what's
a 559? Got that sent out. (I think) Did I work him? Who knows! Who cares!
It was challenging though. I'll have to wait now for all of the logs to
be downloaded to the Web site to find out.
I NEED A RIGBLASTER!
Rick

So it would appear that I have more >credibility than him, according to the "What's your recent experience..." >criterion.

"Credibility" doesn't really exist here. It is all virtual and in the minds of the posters.

The OTs in here are MANLY MEN of great VIGOR and
COURAGE, smell of sweat, and attract flies like women.
Withoutadoubt they are Masters of the Radio Universe
by their own admission.

Novices are something they are not, never were, for supermen
of radio were born that way. In every post one can picture
their great big S out front for all to see.

This is non-existant existentialism, putting Descartes before de horse.

Beep, beep

As far as the word amateur goes.... I see the two distinct definitions of the word....

If you pronounce the word like am-a-cher I see the perception of the word meaning the opposite of professional, as least the perception of the word from people.

If you pronounce the word like am-a-two-er, I see the perception of people alot different from people.

I percieve the word, as the actual definition of the word, which translates as "for the love of" or "the love of" and then add the word radio and it becomes, "for the love of radio."

I do however agree with statements made earlier, that the words amateur radio is possibly a detriment to the hobby service. Most people who are not as educated as some percieve the meaning of the word "amateur" to mean non-professional. I wonder what word would be better though, at least until the general public becomes more educated. Even the words "ham radio" holds a certain connotation with the general non-licensed public.

I guess in the meantime, I will continue to strive to positively change peoples negative or ignorance of what this hobby really is about.

Agreed.... but I do not think we should be giving kids licenses as much as
at least waiting till they become teenagers.

> A shame also that many parents would no doubt discourage conversation
> between their (supervised) child and a "damn foreigner"...ah well.
>

I also could care less to talk/type/key to someone else in a different
country at this point. No possible chance that I will ever get to meet
them, so what is the point. However, traveling within the US is a much more
realistic expectation for myself at least and where I will direct my
communications to.

> But children DO take interest in HAM radio - the key is generating
> more interest.
>

Again, I do believe that more needs to be done, not only at the local level,
and from our larger organizations, not just the ARRL. QWCA, FISTS, and many
more that I can't remember at this time of typing, need to also step up to
the plate too. That is just smart business. They will need new members in
the future and active involvment is important. I have tried and tried
again to get some assistance from hams in my area, to help get into the
local schools to do presentations but never got any help. I can only do so
much. But this is normal within the ham community, 10-20 percent actually
get involved, and the others don't.

I cannot seem to find that either, but just going by what the "old-timers"
say, after all, they SHOULD know all the rules by heart since they have been
in the hobby for so long. I currently nor have owned a CB rig, but have
used one in a multi-car convoy circumstance.

Darn it. You're more credible than me.

If I keep this up, Jim will be able to pigeon hole my last Novice operating experience, and declare, "Aha! You're not credible to comment on the Novice subband refarming."

"nickpick"?

All I do is ask simple, direct questions and point out people's
logical errors and other mistakes. Plus ask for objective evidence of
some claims. Some people don't like that, because it points out facts
they don't like. Like the fact that a claim of having "worked all bands,
lots of times" is false. or that "there's nobody there" on the Novice bands
is based on a few experiences a dozen or more years ago.

Suppose somebody said "PACTOR II is no good", but had never used the mode
and knew little or nothing about it. How much credibility would they have
with you?

>Been there, done that, no thanks.

The only time I can recall you digging up old posts was to argue endlessly
about a typo involving "comparing" vs. "comparting".

> What does it tell you that everytime Carl
>or I mention hams doing digital experimentation, Dick jumps on us with all
>four feet?

"Jumps on you with all four feet"? That's a different thing than being
against experimentation. Perhaps he is simply pointing out some facts you
don't like.

For example, despite all the preaching by Carl and yourself about
experimentation,
the only HF amateur activity Carl has mentioned actually DOING with his ham
license is DXing and ragchewing on SSB. Now there's absolutely nothing wrong
with his doing those things. And the only "digital experimentation" you talk
about is
using your store-bought SCS box. Again, nothing wrong with that, either. But it

does seem to get a bit "do as I say, not as I do".

>Everyone who has been following these postings is free to make up
>his/her own mind.

That's why I'm asking you to provide some backup to your claims.

>Those without your particular set of blinders will see

All W0EX writes in this post is

"there you have it"

and

"Sure, lots of hams who can find LOTS of time and have the aptitude to
learn the basics of DSP might benefit marginally from time spent with a
evaluation board. LOTS of time."

Is any of that not true?

I don't see anything in that post to indicate that W0EX is against
experimentation
of any kind by hams. He's just pointing out some obvious facts. Like the simple
fact that for many if not most hams, the ROI on doing the eval board thing is
simply too low.

Is any of that not true?

If the above post is the best you can do, Cecil, then it's clear you are simply
blowing smoke.

Or maybe you're just mad that I borrowed your "if is for children" mealy-mouth
excuse.

I think the locos referred to a F40PHs, which are special 4000 HP units. Their fuel consumption is relatively high because they also provide head-end power (HEP) for the train, instead of steam. HEP is 480V, 60 Hz, three phase, and is used for heat, air conditioning, lighting, and other purposes on the passenger cars.

>me is the voltage/current that these things deliver to the traction
>motors that drive the train. Anyone know?

Typical traction motor voltage is nominally 600 volts with DC traction motors, but it varies depending on speed and load. Traction motors are series DC motors because of their torque curve. Typical use is one traction motor per axle. So a six-axle 4000 hp unit has six traction motors, each requiring about 900 amperes at 600 volts to deliver full power (1 HP = 746 watts in an ideal motor).

The latest models of diesel electric locomotive use brushless AC traction motors, fed with variable-frequency AC.

Lots more info on the EMD and GE websites. Some railfans have web pages devoted to locomotive operating manuals. Neat stuff!

--

Lessee, if the loco gets .5 MPG pulling the train, and there are 200 passengers aboard, the resulting effeciency is 100 passenger-miles per gallon - at 90 MPH.

Hi all,
well i just joined this thread half way through so havent got the full
story.

To me it doesnt matter whether your on CB or have an A/B or novice
ticket. To me its all about having a good chat,passing knowledge and
experience around and meeting new people. The medium through which
that can be done for me may be over a pint of Guiness,on a cb,on a
HF/VHF/UHF tranciever or via the internet.

I really can't understand the rivalry between various factions.

I started as a straight40 am illegal cb'er,i progressed to illegal ssb
then a B licence and now have had an A licence for maybe 6 years or
so ??. I listen more than talk and only talk/jump into conversations
when i have something useful to add. I dont blather on about sig
strengths and all that but some do.

In the end its a use it or lose it situation. Id rather have two old
duffers going on about sig strengths and quality on 2m fm than have
the whole band clear and the DTI's greedy eyes resting upon it!!.

So enough of this rivalry people!

Sure you do, Jim, simple-minded primrose path questions.

> "Jumps on you with all four feet"? That's a different thing than being
> against experimentation. Perhaps he is simply pointing out some facts you
> don't like.

It's pretty obvious to the most casual observer that the fact Dick doesn't
like is digital experimentation by hams. I suggest digital experimentation
and he comes back with, "Well, there you have it", as if I had suggested
slaying the sacred calf. He wound up that posting with an admonition that
if someone has enough time for digital experimentation, they should instead
be practicing Morse code. Why am I not surprised that you support that agenda?

> That's why I'm asking you to provide some backup to your claims.

I did below but you dismissed it as expected.

> Let's see what you've got:
> All W0EX writes in this post is "there you have it"
>
> I don't see anything in that post to indicate that W0EX is against
> experimentation of any kind by hams.

Of course you don't, Jim. That's why it is a waste of time to go dig up
posts to prove a point to you. You reject any and all points that don't
match your agenda.

"Well, there you have it" is a negative response in virtually everyone's
book except yours. With your deny-everything attitude, it is a waste of
time to go digging up old posts. If Ed can understand Dick's negativism
toward digital experimentation, why do you try to deny it? You remind
me of a guy I used to work with. When asked what he would do if he were
caught red-handed in bed with the neighbor's wife, he said, "I'd deny it".

It has always seemed to me that capital-L Liberalism works best under a monarchy. Having all the power concentrated in one person who rules by decree means that radical reforms can be easily and efficiently carried out. For such reforms to be accepted by the masses requires that the government be embodied in one, very public personage who leads by example and personal style. It helps if that person is groomed from birth in a political dynasty to play the role. And, to make the reforms a permanent part of the national culture, it is important that the person remain in power over his or her lifetime and that an orderly succession occur at death.

The most successful liberal presidents in the 20th century were Roosevelt and Kennedy: Roosevelt was elected president-for-life -- literally. And remember what Kennedy's presidency was called? Camelot. Each made one man, the president, the central figure in the government. Each swept into office with overtly radical change in the offing, almost like a change of dynasty. Each had a certain "style" that could be effectively communicated to the common people.

It could be argued that the unsuccessful presidencies in the US, particularly in the late 20th century, were those of men who were either (or both) unstylish, almost buffoonish caricatures of themselves or grim, gray, humorless, androids who, only when absolutely required to do so, would make a public speech, but only one carefully crafted by their minions and only delivered in a stultifying monologue.

The exception, which, paradoxically, proves the thesis is the presidency of Ronald Reagan. Reagan's public (and private) persona had much of the stylish trappings of monarchy that made the man genuinely liked by the populace. And this popularity made it possible for his political affiliates to finally begin pecking away at the New Deal and New Frontier reforms instituted by his liberal predecessors.

So... Who can be king now?

In article <ab8flp5j0s@enews2.newsguy.com>, "KC8PMX"
<kc8pmx@NOSPAMdiamondcs.net> writes:

>I do however agree with statements made earlier, that the words amateur
>radio is possibly a detriment to the hobby service.

It's almost a psychological maxim that radio amateurs are wanting
recognition on a "professional" level...hence the long-ago self-label
of "HAM." Saying "ham radio" instead of "amateur radio" is much
more self-satisfying and avoids carrying around all the emotional
connotation of "amateurism" as being of "lesser value."

This seems to be very strong on the devotees who want to embrace
amateur radio as a Lifestyle, assuming a personna of expertise or
greatness through longevity and purely hobby activities of long tenure.
The ARRL reinforces the Lifestyle image in its publications. To the
League it is the Holy Grail of existance, as well it should be for an
organization whose headquarters and officers must maintain a kind
of "professional amateur" environment-existance for survival.

>Most people who are not
>as educated as some percieve the meaning of the word "amateur" to mean
>non-professional. I wonder what word would be better though, at least until
>the general public becomes more educated. Even the words "ham radio" holds
>a certain connotation with the general non-licensed public.

Ryan, the general public has had a chance to be "educated" for half a
century of the existance of all kinds of media input. The Big Org up
near Hartford just hasn't done its job in getting media attention in all
that time. The Big Org fools its members into thinking that "the word
is out to the public" when the most it does is to get the word to those
already IN the hobby.

The general public will perceive "ham radio" as a hobby, about on the
same level as scanning listeners or CB users or those playing around
with FRS handhelds. Take any formal or informal poll on that subject
and the statement will be true.

The general public doesn't see any "service" aspect as exemplified by
the individual hams who NEED some "belonging" and excuse for
doing their thing. Too many hams have gone the delusional route of
adopting a virtual paramilitary "service" rationale for engaging in a
HOBBY. That hobby is technologically-intensive but the "servicemen"
are into the "service" aspects almost to the point of obsessive
delusions replacing actual education in the technical arts.

An interesting sidelight to the "serviceman" type of hobbyist is the demographics of US amateur radio. Flip through any amateur radio publication collection spanning the last half century, observe the pictures of various hams and "profile" them. There are two very major profile aspects: Hams are male, hams are white.

Yes, there are exceptions but those only "prove" that exceptions exist. The overwhelming majority of radio amateurs are male and white. Much more so than the general population of the USA.

The above would have been understandable in the first half of the last century. White male predominance was common in all technological-trade fields of endeavor then. The white male predominance in ham radio continues throughout the last half of the last century and continues into the new millenium. That white predominance is diluted to include most races and ethnicities in other techno-trade activities. While females are getting more and more involved in everything outside of the home, ham radio continues its second-class status of females as objects in the "YL" and "XYL" labels (approved traditional abbreviations).

Let's look at the international scene of radio in the last half of the past century. The state of the general radio art has vastly improved worldwide, spurred on primarily by business, trade and the ability to offer or promise a better quality of life for everyone. Focus on amateur radio. Outside of single-channel, single-user SSB on HF, the pioneering in new modes and methods has come from outside the USA...in "foreign" lands of mixed ethnicities. NB: G3PLX's surname of "Martinez" is not exactly in the Anglo-Saxon fashion. :-)

Focus on amateur radio organizations. Who was the most resistant to change in amateur radio regulations in the last half of the past century? The ARRL...as the holdout on S25.5 changes at the IARU meeting. The ARRL's latest "policy" on code test changes is a no-policy position, a null, a hands-off either-way position. The US administration's position on 1.7.1 at WRC-03 will follow the IARU recommendation, not the non-policy of the ARRL.

What seems to be the case is a predominently male, white organization essentially controlling the mindsets of a quarter of the licensed radio amateurs in the USA who also appear to be male and white. By many examples that Big Org is almost ultra-conservative and very resistant to change of any kind.

>I guess in the meantime, I will continue to strive to positively change
>peoples negative or ignorance of what this hobby really is about.

That's a laudible effort and should be applauded by hams.

I would caution some choices of words. Non-amateurs are able to observe what the ham radio hobby "is about." It is out in the open, nothing concealed, and well publicized in the ham radio area.

The general public is not stupid. It is simply not fully informed of certain hobby activities. Ignorance is not stupidity. Those two words are linked by the same emotional baggage as the link of "amateur" with "professional."

<kc8pmx@NOSPAMdiamondcs.net> writes:

>So..... could someone/some group start the Amateur Radio Relay League? Sure
>that would cause a stink.....
>
>Ryan

Some could, but that would run into a copyright infringement over
the A-R-R-L, the org at Newington being very upset and very legal
over the Name being "very similar." This happens from time to time
in other organizations and corporations with trademarks as well as
copyrights.

RCA Corporation had some minor flaps with the Radio Club of
America in the 1970s even though "RCA" (the corporation) had
long-time legally-filed trademarks and all kinds of copyrights as
precedents. There was a corporate-wide TM and Copyright packet
that all staff had to read and study in the beginning 1970s which
opened with the warning that all identification of the corporation
outside SHALL include the word "Corporation" following "RCA."

Some are VERY serious about trademarks and copyrights.

The Radio Club of America now uses "RCA" regularly in its ID.
While it was founded five years before the ARRL, the RCA
club apparently did not contest the original forming of Radio
Corporation of America and their old trademarks before WW2.

There's all the baggage of Territorial Imperative and Eminent Domain,
etc., by the organization that has had a virtual monopoly on amateur
radio control in the USA. Devout members would be up in arms, ready
to fight (and probably spill blood) over "attacks" on "their" organization.

The word "Relay" in A-R-R-L long since lost any significance once
telegrams got cheap about a half century ago. See the origins of
that once-local-CT club about why that club was orginally formed.

There should be NO dispute over starting a national organization
under some distinctive name. "Amateur Radio League" might make
it through copyrights although "ARL" is still "close" to ARRL. With
some experimentation a distinctive name could be derived, such as
"Radio Amateur League" or "RAL." :-)

Image is everything for identification. An organization Name could
be made from the word "radio" such as "Radio Amateur Development
Independent Organization" or "Radio Amateur Development and

Interest Organization." There are many possibilities, but a final choice would have to take into account non-infrigement, however close, on existing orgs plus the psychological-marketing look and feel of the name.

Whatever a new organization, it must withstand the onslaught of the Old Believers (examples: Brakob, Heil, Roll, Carroll, etc.) who will raise the Hue and Cry of "it can't work because it isn't as 'big' (noble, wonderful, etc., etc., etc.) as The League." There will be endless attempts at humiliation by these Devout Fedayin and usual insults will be rounded up and delivered. That's a guarantee.

On Tue, 22 May 2001 11:18:12 GMT, Kim-W5TIT says:

> *If* the ARRL ever did move to a position such as this,
> don't you think that it would create less competition
> with other groups?

First, I don't think competition is a bad thing.

Second, I don't see any other clubs or associations out there
in credible competition with ARRL.

My good friend Don Stoner, W6TNS (SK), had the right idea when
he founded NARA ("National Amateur Radio Association" --
where have you seen those words lately), but I think Don made
a mistake when he tried to run it out of his own deep pockets.
It just never achieved critical mass.

But the competition would have been good for ARRL and Amateur
Radio.

73, Hans, K0HB

PS: Lest you dismiss Don as some sort of old timer with no vision,
he was the guy who sparkplugged the first Amateur Radio satellite,
OSCAR-1, and was a founding member of AMSAT.

You make some good points. Everyone wants something for nothing. Note that Juno and Net Zero are down to 10 hours a month free - if you can get that. One used to be able to get ball games on the internet if the local stations didn't carry the game. You still can, but it went from free to $10.00 per month. The advertisers are getting on to the fact that no one is spending; therefore, they won't pay as much. The free ride is nearly over.

You make an excellent point about the high power machines though. Gee, daddy and mommy can buy this nice piece of equipment, I can play games, and I can meet neat people on the internet. Hmmm. We just had a guy in Greece, NY (just North of Rochester) arrested for raping a 14 year old girl he met on the internet. Now, there are 27 more charges and more complaints being filed every day. Seems he met girls and women on the internet, got them over to his house, and had some 'fun'. The ages (so far) range from 11 to 30. Nice guy. Nice internet. Oh, BTW, my former ISP had a lot of problems on 9/11 and I was without internet service for a week. No biggie, but the radio has always worked - even if my power was off.

In any case, so what will junior do once he graduates from high school? I've noticed that now our engineering colleges have more and more foreign students. Am I to assume everyone will get a degree in business administration and learn to manipulate companies and electric power distribution such as happened recently?

Seems no one wants to actually work anymore. Too bad, it won't be much fun being a 3rd world country. Then you can also forget about the internet as most people won't be able to afford it.

3205. An out-of-this-world opportunity to PROMOTE ham radio

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-07 20:19:12 UTC
From: jason_hsu@my-deja.com

Source record: 42474

This post may be jumping the gun, because it's not a done deal yet. But I smell an opportunity for a MAJOR CELEBRITY ENDORSEMENT!!! I hope that many ARRL officers have thought of this as well.

If Lance Bass of bubblegum pop group N'Sync goes into space, this will be the best promotional opportunity EVER for ham radio. Like other astronauts, Lance can use ham radio to talk to schoolchildren.

Just think:
1. When most astronauts talk to students, only the local community knows. If Lance Bass talks to students, the buzz will be EVERYWHERE.
2. Millions of young people who never heard of ham radio will be introduced to it for the first time ever.
3. Lance Bass will break down the image of ham radio as a hobby for old men.
4. 99%+ of kids have never heard of ham radio. Even if a scant 1% of kids become ham radio operators, the impact on our hobby will be immense. Recruiting young people into our hobby is quite important, as a large percentage of today's experienced hams joined our hobby at a young age.
5. For that matter, many adults will hear about ham radio for the first time ever and see how it enables people to talk to astronauts. If 1% of nonham adults join our hobby . . . . .

What is the logical error or mistake of the date of a persons latest Novice
subband experience?

> Plus ask for objective evidence of
> some claims. Some people don't like that, because it points out facts
> they don't like. Like the fact that a claim of having "worked all bands,

I fully agree with this concept. BTW, there's no rule that states that you
cannot use your callsign as your "handle" as long as you're using equipment
that's type-accepted for CB.

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's) RM-10413
Amateur Service Rules Governing)
Operating Privileges)
)

REPLY COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments REPLY specifically to the comments of Timothy J. Fiebig, K2TF.

I. Discussion:

While Mr. Fiebigs' comments fly the flag of "experimentation and progress", I feel they would have three undesirable consequences if adopted as written.

A. LITTLE ROOM FOR THE PROPOSED EXPERIMENTATION "PARK"

In other comments on RM-10413 I have suggested that the current "Novice" CW segments on 10, 15, 40, and 80 meters ought to be assigned to an "experimental park". This would provide significant space (375 kHz) spread over 4 HF bands.

Mr. Fiebig suggests the "experimental park" be limited to "25-50 kHz". This would amount to just a token allocation, and would be of limited use since it would likely exist in only one (or perhaps two) of the HF bands.

A wider range of frequency choices ought to be provided to give experimenters access to the different propagation characteristics of several HF bands.

B. NOVICE CW SEGMENTS WOULD REMAIN

Part of the reason for the unpopularity of the Novice license and it's decline in recent years is that the current allocations tend to isolate Novices into small ghetto's away from mainstream amateur operations. Thus the few remaining Novice licensees have fewer and fewer opportunities for contacts, and they are isolated from

the advantage of interaction with more experienced amateurs in the 'mainstream' parts of the bands, damping their inclination to remain active and upgrade their skills.

Mr. Fiebig's proposal does not remove the current Novice CW ghetto's; it simply diminishes their size and relocates them slightly in the band, effectively reinforcing the sense of 'second class RF citizens' of these licensees.

C. DIMINISHES SPECTRUM FOR DIGITAL OPERATIONS

While Mr. Fiebig "talks the talk" for promoting digital operations, his proposal in fact diminishes the amount of space available to digital modes by establishing large "CW exclusive" segments in areas where digital operations are now allowed.

This serves to elevate the protection given to Morse operation, establishes an exclusive CW turf which does not now exist, a precedent which is undesirable for the future growth of digital modes.

II. Summary

Mr. Fiebigs' proposal would:

1. Give only token space to new experimentation.
2. Perpetuate the "Novice ghetto syndrome".
3. Diminish the amount of spectrum available to digital operations.

Rather than move amateur radio forward, these factors actually are regressive, and the proposal should be dismissed.

Respectfully,

Hans Brakob, K0HB

Jason, the "Old Hands" on this group don't necessarily want young people or even more people in amateur radio. They treat it as their own private playground and want to keep it that way. They've already played "King of the Hill" and the outcome has been carved in granite. No newcomers need apply.

Anyway, I think its a great idea.

Perhaps not. It appears that 1991 is the first year that code was
deemphasized.

I disagree. I think most failed at actual Morse Code use, then "upgraded"
to a license that would allow them to actually communicate.

>It's almost a psychological maxim that radio amateurs are wanting
>recognition on a "professional" level...hence the long-ago self-label
>of "HAM." Saying "ham radio" instead of "amateur radio" is much
>more self-satisfying and avoids carrying around all the emotional
>connotation of "amateurism" as being of "lesser value."

Now you are a psychologist, Lennie?

Having BEEN an "Amateur" for 29 years, I can say with informed certainty
that this is nothing but foolishness on your part.

The term "Ham" was applied to Amateurs before there was any significant
difference between "Amateurs" and what you term professionals.

>This seems to be very strong on the devotees who want to embrace
>amateur radio as a Lifestyle, assuming a personna of expertise or
>greatness through longevity and purely hobby activities of long tenure.

If by this you mean that we take pride in what we do as both hobbyists or
volunteers, then you'd be correct. Amateur Radio does take on a life of it's
own...Of course we know this eats at you because you cannot, by your own
inhibitions, ba a part of that life.

Sucks to be you.

>The ARRL reinforces the Lifestyle image in its publications. To the
>League it is the Holy Grail of existance, as well it should be for an
>organization whose headquarters and officers must maintain a kind
>of "professional amateur" environment-existance for survival.

And such similar "lifestyles" are not enjoyed by the devotee's of other
pasttimes?

Puh-leeze.

>Ryan, the general public has had a chance to be "educated" for half a
>century of the existance of all kinds of media input. The Big Org up
>near Hartford just hasn't done its job in getting media attention in all
>that time.

Lennie, Lennie, Lennie...lying agian.

>The Big Org fools its members into thinking that "the word
>is out to the public" when the most it does is to get the word to those
>already IN the hobby.

The only one you are fooling is yourself, Your Ineptness. Especially when we see evidence of this to the contrary in our everyday lives.

IE: Chattanooga Free Press, March 31st 2002, Page E1(Lifestyle Section), lead item. "In Internet Age, ham radio still attracts hobbyists". Took up top 1/4th of page and 1/3rd of back page with color photos and thorough write-up on current licensing prerequisites and modern-day Amateur Radio programs and practices.

Notable in it's absence was any reference to a need for a degree in night-school engineering.

>The general public will perceive "ham radio" as a hobby, about on the
>same level as scanning listeners or CB users or those playing around
>with FRS handhelds. Take any formal or informal poll on that subject
>and the statement will be true.

And I can also take a poll that asks what they think about the moon landings and many think it was staged and never happened. Do I believe them...???

>The general public doesn't see any "service" aspect as exemplified by
>the individual hams who NEED some "belonging" and excuse for
>doing their thing.

Thank-you Mr. Gallup.

>Too many hams have gone the delusional route of
>adopting a virtual paramilitary "service" rationale for engaging in a
>HOBBY.

Oh...??? And you have come to this "informed" opinion by WHAT direct interaction with Amateur Radio or Amateur Radio licensees? on RRAP...?!?! LOLOLOLOLOLOLOLOL ! ! ! !

>That hobby is technologically-intensive but the "servicemen"
>are into the "service" aspects almost to the point of obsessive
>delusions replacing actual education in the technical arts.

I reitereate my above inquiry. Serious answers only, Your Slanderishness. No smileys...facts only, please.

>An interesting sidelight to the "serviceman" type of hobbyist is the
>demographics of US amateur radio. Flip through any amateur radio
>publication collection spanning the last half century, observe the
>pictures of various hams and "profile" them. There are two very
>major profile aspects: Hams are male, hams are white.

OK...and what does this prove? That because I happened to take interest in Amateur Radio and my decendents came from Europe that somehow that gilds my opinions or participation ?

>Yes, there are exceptions but those only "prove" that exceptions
>exist. The overwhelming majority of radio amateurs are male and
>white. Much more so than the general population of the USA.

It will be interesting to see how Lennie comes up with an explanation how gender and race formulate Amateur policy. I am further interested in seeing how he suggests that anyone has prevented anyone that chose to do so from pursuing a license.

>The above would have been understandable in the first half of the
>last century. White male predominance was common in all
>technological-trade fields of endeavor then. The white male
>predominance in ham radio continues throughout the last half of
>the last century and continues into the new millenium. That white
>predominance is diluted to include most races and ethnicities in
>other techno-trade activities.

Geeze, Lennie...You really are grasping for some really thin straws. Bad Lennie. Of course you have tried the race and gender cards before only to be dealt back jokers and duces.

What a pathetic putz.

>While females are getting more and
>more involved in everything outside of the home, ham radio
>continues its second-class status of females as objects in the
>"YL" and "XYL" labels (approved traditional abbreviations).

No more than some men object to "Old Man" or "Old Boy". You have a point to make?

>NB: G3PLX's surname of "Martinez" is not exactly
>in the Anglo-Saxon fashion.

Another racist reference? Of what importance is this fellow's heritage other than a pitiful newsgroup travesty perpetrated by a lonely old man with no meaningful lifestyle of his own?

More putziness by someone who should know better. This is how you generate respect for "professional engineers"...???

You KNOW our opinion on that......

>What seems to be the case is a predominently male, white
>organization essentially controlling the mindsets of a quarter of
>the licensed radio amateurs in the USA who also appear to be
>male and white. By many examples that Big Org is almost
>ultra-conservative and very resistant to change of any kind.

Sheesh. What ignorance. What bigotry. What else was I expecting...?!?!

>73 de Jim, N2EY

Jim:

Oh yes, there is no doubt that this is one of the most efficient methods of transporting people currently available to modern technology -- and will be difficult to improve upon in the future! On a typical day, me and my Paratransit bus will transport an average of 13 passengers, and I usually use around 13 gallons of diesel fuel in 125 - 130 miles of driving (we'll call it 130 miles to make it easy). So I'm getting 10 passenger miles per gallon, or 10% the efficiency of a diesel-electric locomotive. This doesn't seem so bad until you figure that a typical AMTRAK train weighs in at around 500 tons (or more!) and the biggest of the busses I drive weigh about 7 tons (empty), and I'm averaging 50 MPH (or less) to the train's 90. It's a good thing I don't drive to/from work in a 10 MPG gas-guzzling SUV!

Hansl:

Sounds like OM Rick made a fine effort to get on CW under spur-of-the-moment conditions, using the tools at had. Also seems like after 7 years away from CW, he could still copy well enough to get down the call signs and signal reports. All in all, seems like a good example of the ability hams possess to use CW to communicate under austere conditions IF they know the Morse code! And, of course, once he gets his Rigblaster, he'll then be able to add the wide world of digital modes to his capabilities! This could motivate him to get off the Geritol Net and start doing something interesting and useful in amateur radio! You won't get any complaints from me!

>Sig Heil is back to that schtick, is he?

And why not? YOU said you were going to get an "Extra Lite" out of the box. Well, the box has been open for two years now, and you've done nothing of the sort.

But it's nothing we didn't expect. You can't even keep your own promises, let alone step up to someone else's challenges.

>>You are free to experiment to your heart's content. You'll
>>just not be able to do any communicating on the ham bands.
>
>Study the big, big table of allocations in Part 2, Title 47 CFR, and

Then fire up, Lennie! Let's hear you! Let's see just how efficiently you can radiate RF under the technical parameters of Part 15! Pick a frequency! Pick a mode! Go for it! With the field strength limits of Part 15, you MIGHT be heard down the block!

Assuming, of course, your neighbor isn't using his garage door opener at the same time!

BBBWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA! ! ! ! ! ! !

See ya on 20 meters, Your Putziness!

NOT!

I didn't say anything about the rules, just that "we" decided. Look, if an ad hoc group can decide to administer code exams via Farnsworth rather than Morse as specified in the "rules," certainly r.r.a.p. can decide not to permit Part 97 callsigns on Part 95 radio. Its called anarchy. Its OK, that's how things are done now.

>ride is nearly over.

Ever listen to ball games on a broadcast receiver? I did that way back in grade school in the 1940s as I've done all that time since up to 2002. Never paid a dime for any game (at 12 cents a kilowatt-hour, a little AC-DC BC receiver of 50 Watts demand costs about a penny a game). Advertisers pay for all those games...with some exceptions such as the Wisconsin State Football Network and some others.

I have two CDs of about 1.1 GB total capacity storing nothing but device datasheets and application notes. Those were obtained over the Internet without extra charge. I expect those to be as free as they were on paper years ago...except they don't have to be requested over the phone but are available over the Internet...to anyone knowing the URL.

>You make an excellent point about the high power machines though. Gee,
>daddy and mommy can buy this nice piece of equipment, I can play games,
>and I can meet neat people on the internet. Hmmm.

The "Reverend" Jim Jones used ham transceivers to keep his South American cult in "Jamestown" in contact with a San Francisco "church." Maybe it was to keep the Kool-Aid coming? Shall we hold amateur radio to the same standards you are trying to establish for the Internet?

According to the US Census Bureau, one out of five households in the US in the year 2001 had some form of Internet connection. In a nation of about 300 million citizens, that is a LOT of households. Do you want the entire Internet banned because of ONE pervert's actions in NY state?

>(so far) range from 11 to 30. Nice guy. Nice internet. Oh, BTW, my
>former ISP had a lot of problems on 9/11 and I was without internet
>service for a week. No biggie, but the radio has always worked - even
>if my power was off.

Yes, just like 10 million folks in my neighborhood "always had their radios working" during the Northridge Earthquake and the subsequent cutoff of ALL electric power. Everyone did NOT have enough batteries. The no-charge-to-listener broadcast stations all had emergency generators.

"CW gets through when nothing else will?" Even without electric power? Of any kind? How much power output can you get out of a Baygen ham transceiver (if there was such a thing)?

Where were all the glorious ham nets during a REAL emergency in 1994?

>In any case, so what will junior do once he graduates from high school?
>I've noticed that now our engineering colleges have more and more
>foreign students. Am I to assume everyone will get a degree in business
>administration and learn to manipulate companies and electric power
>distribution such as happened recently?

"Junior" will probably do all right. He's already been exposed to computers and they aren't evil, expensive things to him.

Are you talking about a new "Enron" of that future where "everyone has a BA degree and doing 'manipulating?'" Keep up with the latest news. Good old Enron has been uncovered to do some dirty tricks in the state of California about electric power rate hiking and suchlike.

Oh, and on that subject of electricity in California, my local neighborhood NEVER had any brownouts or blackouts that were supposed to be everywhere here (according to the easterners). No problem. Our local electricity provider was producing enough e-power to SELL it to part of the state.

My nephew is an electric power broker in the state of Minnesota. Makes a fantastic income for an ex-USN sub nuke plant PO. Do you want to get into a family-oriented shouting match? I'd advise not to go there...you'd be walking into a minefield without a sweeper.

>Seems no one wants to actually work anymore. Too bad, it won't be much
>fun being a 3rd world country.

I'm retired so I won't take such a dim, nihilistic view. I just don't see it around me...and I observe pretty good. So does my wife. We've worked all our lives and just enjoy the heck out of the Internet in retirement.

>Then you can also forget about the
>internet as most people won't be able to afford it.

Aren't you into some gross exaggeration there? Yes, four out of five households in the USA do NOT have Internet access. Three out of four citizens do NOT have a cell phone subscription in 2002. The numbers keep growing FOR these new services. If they are deemed desireable by the public, they will be purchased.

You can delude yourself all you want on demanding folks "work" for everything...just like you did when younger? Sounds like an old whine uncorked every generation by forty- and fiftysomethings crying in their drinks. That sort of whining was something done in the ancient city of Pompeii, too.

You stay on the thought that amateur radio is all about "work" and manual-everything. You can add generating your own electricity, too, since the electric power is from a dreaded infra-structure utility. That isn't free.

Don't you just HATE it when you've NOT proved a damn thing,
old woman?

Hans, you are INCONSISTENT. You have only ONE position,
that of your own opinion-of-the-moment.

A few days ago you were whining "forget ham radio for the summer"
after you took out your power boat. Now you are busy promoting
ONE posting of yours which has a serious OMISSION.

You have, as everyone has seen, almost taken up arms against
anyone dissing the ARRL since YOU were some kind of official
district person there once...then you pull out the following gem of
a PAST posting in an attempt to "prove" your far-sighted noble
views.

>-------------------------------
>From: K0HB (k0hb@arrl.org)

>
>PS: Lest you dismiss Don as some sort of old timer with no vision,
>he was the guy who sparkplugged the first Amateur Radio satellite,
>OSCAR-1, and was a founding member of AMSAT.
>--

Some THIRTY YEARS AGO a fella called Don Stoner and another,
Pierre Goral, KI7UA, founded the Stoner-Goral Company now known
as SGC. Their "little" company in Belleview, Washington, is doing
nicely and their SGC-2020 is a very good HF SSB transceiver that
sells to both private boat owners as well as radio amateurs. You've
probably not looked deep into that little SGC-2020..."managers"
don't do much technical work and don't really appreciate good design
unless they've laid personal-approval hands on it. Good stuff in that
2020, especially the embedded microcontroller integration.

But you didn't mention that, did you? No, your PAST posting only
pulled out the golly gee-whiz buzz things of acronyms and SPACE
like you were on "intimate terms" with space stuff. Pfui.

Ham radio did NOT invent satellites, doesn't have the funding to
launch anything. Not even close to the monies needed. All those
ham-sats have to depend on the generosity of others who DO fund
the space launches. You imply that ham radio is so technically
groovy and forget ALL about the launch folks who make it possible.
More pfui and ingratitude on your part.

Is designing and building a satellite some kind of marvelous techno-
trip? Not really. It requires only common-sense restricted-power,
unusual environment design rules. Those rules have ALREADY
BEEN PROVEN before OSCAR-1 was even considered. You need
more contacts with NASA and JPL to confirm that...something I did
back in the 1960s in Pasadena. Want to tell me "all about" Mars
Mariner payloads? The Apollo Lunar Surface Experiment Package?
A few other unmanned payloads? NPC-200 certification for ordinary
soldering? All assembly and QC under 10-power stereo microscopes?
Have YOUR gloved hands ever been inside a space-borne payload?

Go ahead, make everyone's day by calling others "liars."

Hans, your trouble is, as stated before, INCONSISTENCY. You don't have a consistent position for any more than about a week. Actually, that's a good thing because nobody can pin you down. You can claim "rightness" without a worry by pulling out SELECTED old postings. You are a vacillator, a sort of broad-band, unstable oscillator in action. That doesn't produce a good signal.

Did I misstate something? Are you a radio amateur? Are you an ARRL
member? Do you have any connection whatever with amateur radio?

> Such an attitude towards potential newcomers, tsk, tsk.

You've admitted that you really have no intention of obtaining an amateur license. That hardly makes you a potential newcomer. Naw, your real playground is here in this newsgroup before a small readership.

> It's a good thing State "retired" you. God Help the USA if such
> an attitude were part of US foreign policy.

Who "retired" you, Len? Does it tweak your nose that I believe you to be full of beans?

>Len. Just be certain not to interfere with licensed users.

Maybe he can start a Part 15 Users Group in SoCal....say, a handful of folks within a couple miles of his location?

I am still waiting to hear the results of his mobile operations on 11 meters...the same 11 meters he claimed at one time was soooooo useful to those who defiantly choose to not get an Amateur license.

Also still waiting to have him tell us which radio service was created for "strictly recreational" purposes. We know whcih one's can be USED for that purpose, however he has yet to either admit he was wrong or correct himself. None exisits, per 47CFR en toto.

Am also still waiting for his presentation on microwave techniques. You remember...Lennie struted his stuff about how much "professional engineers" had to offer Hams, however, he's not the one to do it...Of course he's not.

And also waiting on his revelation as to which VE session he sat at to get his "out of the box" Extra Lite.

Come to think of it, just about everything Lennie has started in here has been left waiting...by him.

Why am I not surprised...????

>Hans, you are INCONSISTENT. You have only ONE position,
>that of your own opinion-of-the-moment.

You mean as opposed to your singleminded, one track mind that can't find any room for any compromise or consideration?

I'll take HIS kind of "inconsistent" over anything the alleged engineer has produced ANY day. At least he's shown a willingness to keep an open mind. You're just an open pit.

>Is designing and building a satellite some kind of marvelous techno-
>trip? Not really. It requires only common-sense restricted-power,
>unusual environment design rules. Those rules have ALREADY
>BEEN PROVEN before OSCAR-1 was even considered.

No...they just proved what could be done with minimal assets, Your Snippingness...That the Little LEO concept was not only viable, but potentially profitable.

>You need
>more contacts with NASA and JPL to confirm that...something I did
>back in the 1960s in Pasadena.

And let me tell ya they miss ya, Lennie. Why, just the other day I was talking to a friend of mine who said your name is still spoken with reverence in JPL...."Sure do miss that Anderson guy...No one could clean a commode or push a broom cart like him..Sorry he retired..."

>Have YOUR gloved hands ever been inside a space-borne payload?

Has YOURS?

In order for one's hands (gloved or otherwise) to be in a "space-borne" payload, one must also be in space. A quick review of NASA archives fails to produce any "Leonard H. Anderson" in the Astronaut Corps or as payload specialist on any Shuttle mission since it's inception.

PERHAPS you were reminiscing about days spent in the housekeeping staff at JPL when you would sneak into the clean rooms when no one was watching and dream of meeting E.T. as you saved Princess Leia from Darth Vader. No doubt while riding "the payload" into orbit ala Slim Pickins' nuke ride in "Dr. Strangelove"...???

>Go ahead, make everyone's day by calling others "liars."

Not "others"..Just you. Because you make it soooooo easy to do.

>That doesn't produce a good signal.

At least Hans has a license to produce a signal. I've heard it...Worked it...Sounded good here...Got the QSL card a couple time over.

And the word HAM RADIO still has a negative connotation with some people
that I have run across in the past, trying to explain what all of those
antennas on my truck mean. WE as (as licensed hams that is) know what the
words HAM RADIO mean but the general public may not have the same....

>
> This seems to be very strong on the devotees who want to embrace

> of "professional amateur" environment-existance for survival.

Amateur radio is not my "lifestyle" nor will it ever be. It is an integral
part of my life but does not consume it completely. I also am into
photography, scuba diving, heavily into the fire service where my energy has
been lately on public education to promote fire safety.

> >Most people who are not
> >as educated as some percieve the meaning of the word "amateur" to mean
> >non-professional. I wonder what word would be better though, at least
until

> that time. The Big Org fools its members into thinking that "the word

> is out to the public" when the most it does is to get the word to those
> already IN the hobby.
>

That may be true that the ARRL may have fallen back in some of the
responsibility, but the blame is not totally with them. Another large
percentage is held with other organizations, and local clubs and of course,
individual hams.

> The general public will perceive "ham radio" as a hobby, about on the
> same level as scanning listeners or CB users or those playing around
> with FRS handhelds. Take any formal or informal poll on that subject
> and the statement will be true.
>

And that is fine for the part of our hobby/service that we enjoy in exchange
for performing public service and emergency comms.... Also it is necessary
to put ourselves in the spotlight in a positive manner for every public
service/emergency communications too, to help dissipate the association with
CB.

> The general public doesn't see any "service" aspect as exemplified by
> the individual hams who NEED some "belonging" and excuse for

> are into the "service" aspects almost to the point of obsessive
> delusions replacing actual education in the technical arts.
>

Baloney.... if we are performing public service communications or emergency
communications we definitely need to have some level of order or consistency
or the whole thing falls apart. Ever heard of the Incident Command System
utilized primarily for fire departments, but also used elsewhere?

> An interesting sidelight to the "serviceman" type of hobbyist is the
> demographics of US amateur radio. Flip through any amateur radio
> publication collection spanning the last half century, observe the
> pictures of various hams and "profile" them. There are two very

> continues its second-class status of females as objects in the
> "YL" and "XYL" labels (approved traditional abbreviations).
>

As far as females, I have seen submissive XYL's who from what I percieve are
limited to only communication with their husbands..... Not every licensed
female ham is this way, but you are right, there is somewhat of a
second-class female group.... Through overdominating husbands who control
every last aspect of their wive's lives instead of treating them as equals.

Oh really??? Other than ham radio publications like QST, 73 and the like, you have to hunt high and low to find activity around here. My activities as Public Relations/Promotions manager with my club hopefully are changing some of that.

>
> The general public is not stupid. It is simply not fully informed of

Of course they aren't stupid, but they may be ignorant of ham radio. Ignorant can have a different meaning depending on the user of the word. My definition of ignorance is "the lack of knowledge or information about something."

You not knowing how to stock up on batteries is not my problem. I keep two days' worth of batteries to run *all* the receivers and a transceiver (assuming a normal transmit/receive duty cycle). Reducing that to one receiver gives me over a week of listening to anything from 150kHz to 500MHz, and reducing transmit time to emergencies gives me 3-5 days. That's all before I crank up the car that never goes below 1/3 of a tank (which will recharge the transceiver's batteries 3-4 times, and the other batteries 2-3 times) or put out a solar panel. Given time and encouragement, I could also scrounge parts for a wood-fired steam generator or a wind turbine to supplement the others. (actually, at last check, I have most of the parts available, but I could get pretty much everything that's needed from dumpsters in a matter of hours)

Now, why the hell would I be without electric power of any kind?

You don't know the relevant history, then.

In 1975, the FCC proposed a restructuring that involved a "dual ladder" system and no less than 7 (seven) distinct license classes. One of those classes was a VHF/UHF entry-level license with no code test at all.

The whole idea was roundly rejected by the majority of those who expressed opinions to the FCC.

In 1983 the FCC again proposed a no code test VHF/UHF license, and again strong opposition from those who bothered to express an opinon ended the matter - for a time.

Both of the above were serious proposals by the FCC.

You seem more like a vampire bat who bites the emperor.

> It is not obvious to me. You are presuming your conclusion - again.

Nope, concluding the presumption just like many others on this newsgroup.
I made that posting for the purpose of testing for a negative response from
Dick. He didn't disappoint me. Ed also picked up on Dick's dislike for
digital experimentation. No doubt, so did the majority of readers of
this newsgroup.

> Youy are grasping at nonexistent straws, Cecil. "Well, there you have it"
> only has a negative connotation to you..

How can you make such a blatantly false statement after I published Ed's
response to Dick's statements? Later on in this posting, you admit your
above statement is a lie.

> You are avoiding the simple fact that you cannot produce any real proof
> of your assertion that W0EX is against "digital" experimentation by hams.

I produced it, Jim, and you denied its reality just like I knew you would.
So why should I waste time on a blinder-equipped closed-minded person
emotionally driven by an agenda?

> It is not substantive. It does not prove your point. It does not even support
> your point.

Of course it does, Jim. Only an idiot with an agenda would conclude otherwise.

> You edited out the rest of what W0EX wrote. Bad, very bad.

That's a lie. I did NOT edit out the rest of what W0EX wrote. That was Ed's
posting that I re-posted, not mine.

> >> I don't see anything in that post to indicate that W0EX is against
> >> experimentation of any kind by hams.
> >

> What you're really saying is that you can't come up with anything better than
> "well, there you have it" as proof.

No, what I am saying is that it doesn't pay to mud wrestle with a pig. I get dirty and the pig loves it. There are at least a dozen earlier postings in which Dick was negative about digital experimentation. Why the hell do you think Dick is arguing loud and long against Carl's and my suggestions that digital experimentation is a good thing for hams to do?

> > If Ed can understand Dick's negativism
> >toward digital experimentation, why do you try to deny it?
>
> I disagree with Ed, that's all.

So you admit to lying when you said I was the only person who considers, "Well, there you have it", to be a negative response? And you were lying when you said it was a Texas/California thing? That's not like you, Jim, to trip yourself up all within the same posting. You are usually much more careful than that.

I've 'defended' ARRL since the early 60's, because I think we need an organization of that stature working for us.

But ARRL is not some religion that must be embraced, forsaking all others. Some competition is a healthy thing, and I'd also support other organizations whose aims were for the future good of Amateur Radio. Also, I'm pro-code-use but anti-code-test.

In your monochrome black/white world these things are 'inconsistent', but in the real world there is a glorious spectrum of colors. Sorry if your narrow view is unable to grasp that notion.

With all kind wishes,

>>It's almost a psychological maxim that radio amateurs are wanting
>>recognition on a "professional" level...hence the long-ago self-label
>>of "HAM." Saying "ham radio" instead of "amateur radio" is much
>>more self-satisfying and avoids carrying around all the emotional
>>connotation of "amateurism" as being of "lesser value."
>
> Now you are a psychologist, Lennie?

The statement still holds. Radio amateurs insist on dropping the
"amateur" description because of its emotional baggage of
negative connotation.

> Having BEEN an "Amateur" for 29 years, I can say with informed certainty
>that this is nothing but foolishness on your part.

QED. That sentence is a very personal objection to a perceived
personal negativism. It has no bearing on anything but one out
of over 600 thousand other radio amateurs' opinions.

The attempt to equate "professionalism" to an avocational
recreation is common among many amateurs.

> The term "Ham" was applied to Amateurs before there was any significant
>difference between "Amateurs" and what you term professionals.

See the ARRL definitions. The original term was coined BY
professional telegraphers as a negative description of amateur's
manual telegraphy skills...or lack of skills.

>>This seems to be very strong on the devotees who want to embrace
>>amateur radio as a Lifestyle, assuming a personna of expertise or
>>greatness through longevity and purely hobby activities of long tenure.
>
> If by this you mean that we take pride in what we do as both hobbyists
>or volunteers, then you'd be correct.

The self-description of personal activities is often glorified to obsessive
proportions...along with the imprecations that all "must" be as good
as the claimants or be thought "lesser." In other words, bragging.

The obsessive side is often glorified in the description of activities
of radio amateurs reported by the ARRL in its publications.

>Amateur Radio does take on a life of it's
>own...Of course we know this eats at you because you cannot, by your own
>inhibitions, ba a part of that life.

Obsession is a psychological disorder. It is not good for mental
health.

> Sucks to be you.

?

> And such similar "lifestyles" are not enjoyed by the devotee's of other
>pasttimes?

Yes. All activities, professional as well as non-professional have
cases of obsession. That other activities have such conditions
is not an excuse or a rationale for continuation.

>>Ryan, the general public has had a chance to be "educated" for half a
>>century of the existance of all kinds of media input. The Big Org up
>>near Hartford just hasn't done its job in getting media attention in all
>>that time.
>
> Lennie, Lennie, Lennie...lying agian.

Not a "lie." Despite the spin used in the ARRL's descriptions of
what it "does" to publicize amateur radio, the fact remains that
the ARRL has NOT succeeded in achieving any significant impact
in the public mind about amateur radio in a half century.

Denial of a clearly-observable fact is not an excuse/rationale.

>>The Big Org fools its members into thinking that "the word
>>is out to the public" when the most it does is to get the word to those
>>already IN the hobby.
>
> The only one you are fooling is yourself, Your Ineptness. Especially
>when we see evidence of this to the contrary in our everyday lives.

Those already IN a hobby get "evidence." Those NOT in a hobby
see very little, if any at all.

Those obsessed by an activity often presume to think for a very
large group of citizens (ego over-ride of thinking) and this disallows
their ability to properly publicize their hobby activities. That is a
negative, non-productive attitude in public relations.

> IE: Chattanooga Free Press, March 31st 2002, Page E1(Lifestyle
>Section), lead item. "In Internet Age, ham radio still attracts hobbyists".

Newspapers, local or regional, carry a great deal of diverse activity
articles with every edition. That ONE article out of a hundreds is
spotlighted is only proof of ONE activity. Newspaper readers are
not suddenly awed or interested just because an article covers an
activity that a claimant thinks is "important."

An examination of any newspaper will turn up many different articles
in each edition, covering a great variety of subjects and activities.

It is a common mistake to over-identify some activity published in real ink on real paper as "important." Editors and publishers select what activities, what news is considered "important to readers." It is really a selective activity by a very small group as to what a rather larger group will get to read. The heart of good public relations work is the convincing of that very small group of the "importance" of the PR target and that it should be published. That's been a fact of life in journalism since day one of newspapers and other periodicals.

What appears in all periodicals is what the editors think is "important." It is their choice, not the readers. This is true in all journalism. In an objective analysis, it can rightly be called a form of dictatorship since there MUST be preselection of reporting to fit finite budgets of news-print or air time.

> Notable in it's absence was any reference to a need for a degree in
>night-school engineering.

There is no such thing as "night-school engineering." College-credit courses in engineering requisites are the same whether formal classes are held in daylight hours or night-time hours. If formal classes are accredited, those credits are transferrable to other accredited schools.

This was not in the subject thread, but some individuals are obsessed with trying to put down others for succeeding in something. Again, obsession with an activity is not mentally healthy.

>>The general public will perceive "ham radio" as a hobby, about on the
>>same level as scanning listeners or CB users or those playing around
>>with FRS handhelds. Take any formal or informal poll on that subject
>>and the statement will be true.
>
> And I can also take a poll that asks what they think about the moon
>landings and many think it was staged and never happened. Do I believe
>them...???

Everyone has a free choice on "what to believe."

Any general public poll on the Apollo project will show that the general public believes the moon landings were accomplished fact. That subject is not under discussion.

>>An interesting sidelight to the "serviceman" type of hobbyist is the
>>demographics of US amateur radio. Flip through any amateur radio
>>publication collection spanning the last half century, observe the
>>pictures of various hams and "profile" them. There are two very
>>major profile aspects: Hams are male, hams are white.
>
> OK...and what does this prove?

The proof should be obvious. By clear and present proof in the form of photographs in amateur radio periodicals, the overwhelming majority of hams are male white men. By appearance and text

description, the majority are over thirtysomething at the time of
the photograph.

That sexual-racial bias belies the repeated statements that "amateur
radio is for 'all'."

>>NB: G3PLX's surname of "Martinez" is not exactly
>>in the Anglo-Saxon fashion.
>
> Another racist reference? Of what importance is this fellow's heritage
>other than a pitiful newsgroup travesty perpetrated by a lonely old man with
>no meaningful lifestyle of his own?

Peter Martinez is a clever, informed innovator in the radio arts and
has been active in such for over a quarter century in the UK. His
work has been published by the RSGB in their "Radio
Communications" periodical for a quarter century, most notably
in Pat Hawker's "Technical Topics" column.

The ethnic origin of the surname "Martinez" is Spanish, possibly
Portuguese. That surname is not common to the British Isles.
Surnames are a relatively recent (in terms of written human history)
to the general western European societies.

> More putziness by someone who should know better. This is how you
>generate respect for "professional engineers"...???
>
> You KNOW our opinion on that......

That quote is simply personal opinion which is not in the subject
thread. The style of the quote is common to obsessed, ignorant
individuals who cannot coherently argue on a subject but must
resort to any manner of personal insults.

The pity (to amateur radio) is that the individual quoted is a public
example of claimed longevity in a recreational radio activity and
claims to "speak for the amateur radio community."

Part 97 Title 47 CFR does NOT state "word rate" for test element 1 nor does the old CCITT document state any "word rate." The only thing about International Morse Code insofar as code formation is the ratio of length to dots and dashes and spacing between characters. The word rate can be ANYTHING.

Phil admitted to such in a past exchange but is unwilling to bring it up again. He implied that it was "small potatoes" and "didn't matter." It was an oversight on the part of the rule-makers.

>I didn't say anything about the rules, just that "we" decided.

The statement quoted above plainly says: "Although apparently
the rules state we cannot use our identifying callsigns..."

I asked WHERE in the rules you find this. Are you purposely
avoiding this or just plain dense?

Put up or shut up time.

>Look, if an
>ad hoc group can decide to administer code exams via Farnsworth rather than
>Morse as specified in the "rules," certainly r.r.a.p. can decide not to
>permit Part 97 callsigns on Part 95 radio.

Voluntarily deciding not to use his/her amateur call sign as an
ID during CB operation is an individual choice of the licensed
amateur and is perfectly acceptable ynder CB rules.

Only the FCC has the authority to change that by either forbidding
the use of an amateur call sign during CB operations by persons who
also are amateur licensees or by mandating some other format of ID.
The FCC has done neither.

>Its called anarchy. Its OK, that's how things are done now.

Not on my watch.....

>Phil, what is your most recent Novice subband experience?

Fifty years ago when I was KN2ASP. "Novice subbands" has nothing to
do with use of amateur call signs by licensed amateurs when they
operate CB radios in accordance with CB rules.

Nope nice try

You see Martin Chernech never appears anywhere else he is brand new.

Coincidently He only posts about your web page.

He also posts from Cable one with an IP almost exactly the same as yours which is a dial up which assigns a new IP everytime you come on.

If you think Im buying your Nieve routine Im not. You see google saves all your postings with your IPs. Your now trying with your recent messages to cover your tracks. But the tracks are all over the place.

Your trying to use this Martin routine to avoid killfiles because your not getting attention.

What you need is professional help.

Hello Rick,
Sorry Rick....I am not on dialup. I use cable modem. Obviously Rick if
this guy doesn't have the - exact same -IP as me (cable modem IP's are
static) then it sure as hell couldn't be me.
Besides Mr Magoo..Cableone has ISP service in 16 states and over 60
different cities...
Nice try but you stink as a detective. Keep your day job!!!

<<snip>>

Whoa!

I guess you could call me an old hand, but I welcome new people. It is a
neccesity to get new people into the hobby. I relish the chance to talk to
young hams and hear their
enthusiasm. My CW contacts with 10 year old Extras are highlighted in the
log. I may

be "old" (54), but I don't THINK old and I have no patience with old
buzzards who are
stuck in 1960, wear fedora hats, and go around grumping about how the young
hams will
ruin the hobby. I say, BRING 'EM ON!

Joe, why do you say that? Every generation has its pop idols that were
grumped about
by old buzzards with their lips run out: Elvis in the 50s, the Beach Boys,
the Beatles in the
60s, and so on. My dear old Dad frumped and grumped about the Beatles
saying that
those mop-headed deviates (this was in 1965) would ruin the youth and
destroy the country in 25 years. Well, they didn't, and the music was mild
compared to some of to-
day's explicit lyrics, but, like the pop stars of the past, these will grow
old as well.

I think having pop "heros" and singers, or whatever, use and endorse ham
radio is a
very good idea. Let's get the kids involved, let's lead the way, or get OUT
of the way.

Actually, it can't unless all other parameters of "the international Morse
code" are violated.

§97.503 Element standards.
(a) A telegraphy examination must be sufficient to prove that the examinee
has the ability to send correctly by hand and to receive correctly by ear
texts in the international Morse code at not less than the prescribed speed,
using all the letters of the alphabet, numerals 0-9, period, comma, question
mark, slant mark and prosigns AR, BT and SK.
Element 1: 5 words per minute.

I didn't make that statement. I said we just decided. Just like the VEC's
decided to violate the Morse code standard, whatever it might be. That's
how things are being done today.

Phil, you're getting testy. Time to take a break from whatever is stressing
you.

Only if you do so phonetically; non-standard phonetics preferred. Saying
your callsign as it appears on your license isn't allowed.

> Only the FCC has the authority to change that by either forbidding

You're right, it doesn't. And it has nothing to do with anyone's
credibility to comment on the ARRL Novice subband refarming. You might want
to let Crony Jim in on that nasty little secret.

> You don't know the relevant history, then.

I know that 1991 the code exam was removed from Technician licensing. I
know of no other period in time that the FCC issued licenses without a code
examination, unless it was prior to WW ONE.

> In 1975, the FCC proposed a restructuring that involved a "dual ladder"
system
> and no less than 7 (seven) distinct license classes. One of those classes
was a
> VHF/UHF entry-level license with no code test at all.

Proposed? How does this deemphasize anything?

"I propose that those without recent Novice subband experience be restricted
from commenting on the ARRL Novice subband refarming proposal."

See, it doesn't work.

> The whole idea was roundly rejected by the majority of those who expressed
> opinions to the FCC.

OK?

> In 1983 the FCC again proposed a no code test VHF/UHF license, and again
strong
> opposition from those who bothered to express an opinon ended the matter -
for
> a time.

OK?

> Both of the above were serious proposals by the FCC.

OK Jim, I think I'm beginning to get it. Intent = Action.

"I seriously propose that those without recent Novice subband experience be restricted from commenting on the ARRL Novice subband refarming proposal."

There, that should work.

And the attempt to equate "professionalism" to a misspent career is common among certain non-licensed antagonists on RRAP.

>> If by this you mean that we take pride in what we do as both hobbyists
>>or volunteers, then you'd be correct.
>
>The self-description of personal activities is often glorified to obsessive
>proportions...along with the imprecations that all "must" be as good
>as the claimants or be thought "lesser." In other words, bragging.

Oh...I see...You mean kinda like your claims to having passed over 1.2 million messages as a communications center clerk in the Army, Lennie?

>The obsessive side is often glorified in the description of activities
>of radio amateurs reported by the ARRL in its publication.

Can you, Leonard H. Anderson, DISPROVE anything that is in ANY ARRL publication, from inception to today?

If not, we must assume you have nothing to say but to be abusive and denigrating.

>>Amateur Radio does take on a life of it's
>>own...Of course we know this eats at you because you cannot, by your own
>>inhibitions, ba a part of that life.
>
>Obsession is a psychological disorder. It is not good for mental
>health.

For a guy with over 30,000 posts to various newsgroups for an "avocation" in which he has asserted no interest in being a part of, this is funny...Waaaaaaaaay funny!

>> Sucks to be you.
>

>?

Do I need to say it slower? S u c k s t o b e y o u.

>> Lennie, Lennie, Lennie...lying agian.
>
>Not a "lie." Despite the spin used in the ARRL's descriptions...

Lennie, there is no "spin" in any ARRL publications. Period. Not once in 80 years has anyone been able to "prove" as unsubstantiated or "obsessive" anything that has ever been published in an ARRL book or periodical.

This is, again, a lie by you. A KNOWN pathological liar with his own obsessive-compulsive disorder to denigrate all those who show you to be what you really are....A loser.

>An examination of any newspaper will turn up many different articles
>in each edition, covering a great variety of subjects and activities.

THAT was "spin", Lennie. At first you decry the lack of any "coverage" by the general media, then when presented with an unmitigable reference, you try to nay-say it.

Again...sucks to be you.

>It is a common mistake to over-identify some activity published in
>real ink on real paper as "important."

Well Golly Gee Whiz, Your Lyingship, YOU have been the one saying that if it isn't reported in some media OTHER than an ARRL publication, it's not important!

The article I cited went to over 250,000 homes in paper, and who knows how many ohers that see it on line?

>There is no such thing as "night-school engineering."

There should be. You spent 1/4 of your "career" trying to get a degree. Still didn't add up to much in the electronics field.

>The proof should be obvious. By clear and present proof in the form
>of photographs in amateur radio periodicals, the overwhelming
>majority of hams are male white men.

You still have done nothing except try to inflame some non-existant argument over why any one man or woman takes an interest in Amatuer Radio, other than to try and detour the concersation from your pathological lying and denigration of Amateur Radio in general and some Hams in particular.

>That sexual-racial bias belies the repeated statements that "amateur
>radio is for 'all'."

Still haven't provided me any "evidence" that anyone who desires to participate in Amateur Radio is denied the opportunity to do so.

Shall we, by your logic, NOT put ANY pictures of ANY Amateurs in the periodicals that show a person's ace or gender? Shall we edit ALL texts that express any gender at all? All texts will refer to any person discussed by initials only? Shall all pictures be strictly of hardware? No people?

THAT'S your vision of Amateur Radio? A cold, barren wasteland of faceless digital pulses?..

WHY am I not surprised?

>The ethnic origin of the surname "Martinez" is....

Irrelevant. As is gender, age or race. Only YOU have brought it to the table, Lennie, and rather poorly I migh add.

>The pity (to amateur radio) is that the individual quoted is a public
>example of claimed longevity in a recreational radio activity and
>claims to "speak for the amateur radio community."

As opposed to Lennie, who speaks for no one except himself, and poorly at that..

The REAL pity is that you CLAIM all this knowledge...all this skill...and all this expertise, yet with almost every post you make you only further lay yourself prostrate to your own ignorance.

Why is that?

3271. Scientology Takes Control of Ham Radio

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-08 22:10:17 UTC
From: Phil <Phil_member@newsguy.com>
Message-ID: <abc7o9028ja@drn.newsguy.com>
Source record: 42542
Cross-posted to: alt.religion.scientology,rec.radio.amateur.policy

From the ARRL.org web site

Ham radio could have role in Phenomenon sequel: Amateur Radio is poised to hit the big screen yet again in a movie tentatively titled Phenomenon II. Phenomenon debuted in 1996 and featured John Travolta and his ham operator friend Forest Whitaker. In one scene, Travolta's character appears to be able to copy RTTY transmissions by ear. For the original Phenomenon movie, ARRL provided several props for the ham radio shack. The sequel is still in the very early stages of development. A researcher working on checking facts in the script contacted ARRL to ask if operators actually used the term "CQ" when initiating contacts. She also told ARRL Media Relations Manager Jennifer Hagy, N1TDY, that the possibility exists for the creation of a television series based on the Phenomenon movies. Hagy offered further assistance if needed. No further details were immediately available.

I agree with Phil on this. There is NO prohibition as to using
ANY name/ID/call sign on CB. Ditto that on FRS too.

If anyone thinks otherwise, you'll need to show the rule that
clearly prohibits such use.

Cheers,
Bill K2UNK

> Nice try but you stink as a detective. Keep your day job!!!

Actually using Google Ive got you nailed, Cable modem can and do
change IPs. I have one and mine changes if I wish. Release renew all
sound familiar.

Nice try, what a lame attempt at not using your own mail address.

Truely pathedic. Signs of a spammer. Whats next, relay attempts

If you didnt reside on Verio and Cable one two of the biggest
Spamhouses in the net.

Oh well, watch yourself

Oh and using a Reply to of wily@irs.gov. You know using a false
email like that and causing problems with the IRS.GOV mail servers
could land you in jail.

Try a different EMAIL addy. Proves my point 100%

Loser

Brian:

What do you mean by that? When I was a Novice back in '81, I "actually communicated" with plenty of my fellow hams, utilizing my Novice CW privileges. In fact, I was trying for a Novice WAS, but my problem was I kept working all kinds of DX! Are you saying that it was impossible for Novices to communicate, or that it was just impossible for YOU to communicate *as* a Novice (assuming you were one)?

>If 1% of nonham adults join our hobby . . . . .

Jason:

I'm assuming Mr. Bass is a licensed amateur radio operator. If so,
what is his call sign?

Assuming he *is* a licensed ham, considering his vast celebrity,
particularly among young people, what has he done to advance
the cause of amateur radio recruitment so far? Shirley, he must
know that he is in a uniquely favorable position to make ham
radio known to the young people whom constitute his audience,
and are making him wealthy. If he is not aware of this, I would
hope that the ARRL would approach him and request his help
in amateur radio recruitment efforts aimed at young people.

It would appear that there is a whole lot Lance Bass can and
should be doing for ham radio before he ever gets a ride into
space.

>which Dick was negative about digital experimentation.

So dig them up and repost them. If there are so many, it should be easy for
you.
You have already spent more time trying to intimidate me with "well, there you
have it"
than it would take to dig up a dozen posts. That tells me you know I'm right,
but you
cannot admit it publicly.

> Why the

[expletive deleted]

>do you
>think Dick is arguing loud and long against Carl's and my suggestions that
>digital experimentation is a good thing for hams to do?

I don't see him arguing that at all. What I DO see is W0EX pointing out that
most hams
have neither the time, the training nor the inclination to do serious
development work.
And the ROI (that's one of YOUR pet reasons, btw) just isn't there for most
hams.

>> > If Ed can understand Dick's negativism
>> >toward digital experimentation, why do you try to deny it?
>>
>> I disagree with Ed, that's all.
>
>So you admit to lying when you said I was the only person who considers,
>"Well, there you have it", to be a negative response?

Nope. It wasn't a lie.

Might be a mistake.

But I don't see Ed backing you up on that little phrase being universally
negative.

> And you were lying
>when you said it was a Texas/California thing?

Nope. I wrote:

"This must be one of those Texas/California language things. Maybe it comes
from too much sun."

Again, that might be a mistake. But considering some of the weird word-usage I
see from Texas and California residents, it seems like a good possibility.

What's really interesting is how you resort to name calling when someone
disagrees with you. Let's see, in just this one post, you call me:

"vampire bat"

"blinder-equipped closed-minded person emotionally driven by an agenda"

"idiot"

"pig"

Is this supposed to convince me of the correctness of your arguments?

So here's what I see happening:

1. Kobrinagrams go out to anyone who uses any Scientology trademark in a ham radio discussion.

2. Scientology attempts to force the FCC to turn over all of the ham radio spectrum to itself on the grounds that it's being misused.

3. All anybody talks about on ham radio for a month is what assholes the Church of Scientology are.

Nonsense. This sounds like a BIG WIN, chock-full of SYNERGY. In fact, here is a link that shows LL Cool Ron adjusting a tomato-based product detector during his early radio experiments which led to his invention of single sideband transmission:

I have never been in the employ of the Jet Propulsion Laboratory,
a NASA facility.

>>Have YOUR gloved hands ever been inside a space-borne payload?
>
> Has YOURS?

Yes. The entire power system for the Mars Mariner 1967 flight.
The Apollo Lunar Surface Experiment Package Solar Wind
Spectrometer. A quadrupole mass spectrometer. Several
others (perhaps two dozen different programs) which include a
variety of instrumentation for unmanned payloads.

> In order for one's hands (gloved or otherwise) to be in a "space-borne"
>payload, one must also be in space. A quick review of NASA archives fails to
>produce any "Leonard H. Anderson" in the Astronaut Corps or as payload
>specialist on any Shuttle mission since it's inception.

The word "payload" is used (within the space program) as a "cargo"
component that leaves its carrier (a rocket to boost it into some
trajectory). A "payload" is what is delivered to space for a mission.

No human being is actively involved in the final separation of an
unmanned instrument payload into space. That is why they
call it "unmanned."

Full gloves or finger cots are always used on handling spacecraft
components, payload or integral to a space capsule of rocket
assembly. That is standard procedure everywhere, including
such things as the Space Shuttle Main Engines (SSMEs). That
keeps contamination to a minimum.

You may wish to understand "clean room" environments. The
NASA websites may yield some information but more is found
with companies that manufacture clean room equipment. Such

clean room classes can range from minimal to full "bunny suit"
clothing, all with air filtration in the clean room and specific
rules of cleanliness that can exceed medical surgical areas.

The information is out there. Please try learning something
before writing.

>And the word HAM RADIO still has a negative connotation with some people
>that I have run across in the past, trying to explain what all of those
>antennas on my truck mean. WE as (as licensed hams that is) know what the
>words HAM RADIO mean but the general public may not have the same....

Some in the general public will confuse amateur radio with CB, but
I'd venture to say that most in the general public are simply
ignorant of any aspect of ham radio.

In some neighborhoods there is a negative connotation to a ham
household bearing a forest of antennas. Those are generally
not esthetically pleasing in a residential neighborhood. In that
case it is up to the individual ham to get along with his
neighbors.

>Amateur radio is not my "lifestyle" nor will it ever be. It is an integral
>part of my life but does not consume it completely. I also am into
>photography, scuba diving, heavily into the fire service where my energy has
>been lately on public education to promote fire safety.

Okay, that's the "balance" in The Amateur's Code.

I've known a few who are simply obsessed with one activity.
Those are the seed of my statement.

>That may be true that the ARRL may have fallen back in some of the
>responsibility, but the blame is not totally with them. Another large
>percentage is held with other organizations, and local clubs and of course,
>individual hams.

I've been told that the ARRL has produced, or had procured some
professional videotape presentations. If so, those would be ideal
for TV in some "local feature" programming at a station. The
necessary selling job is to make sure such things don't fall into
the dead zone of 1 AM to 5 AM time slots where stations
typically air "community service" programs. There's no advantage
to airing something when so few are watching.

>And that is fine for the part of our hobby/service that we enjoy in exchange
>for performing public service and emergency comms.... Also it is necessary
>to put ourselves in the spotlight in a positive manner for every public
>service/emergency communications too, to help dissipate the association with
>CB.

That's part of the "selling" job and may be the most difficult.
Station managers and program managers get all kinds of
requests from different organizations, all of whom think they
"deserve" near-prime time. Anyone selling anything cannot
demand time for whatever noble reason...they must convince
the manager (the customer).

I'm not a salesman and have little experience there, but I've
listened to those who CAN sell and those are the words I've
put up. ARRL President Haynie has a sales background
and should be better able to talk about such things.

>> The general public doesn't see any "service" aspect as exemplified by
>> the individual hams who NEED some "belonging" and excuse for

>
>Baloney.... if we are performing public service communications or emergency
>communications we definitely need to have some level of order or consistency
>or the whole thing falls apart. Ever heard of the Incident Command System
>utilized primarily for fire departments, but also used elsewhere?

I didn't write what I wrote lightly. I've seen the emotionally-driven
"servicemen" who still think they are in a "command" mode well
after their military service days. Too many of those are only able
to function where all the equipment and procedures have been
worked out ahead of time. Real emergency situations require an
ability to handle anything. Feel-good bravado statements of "we
can handle anything!" aren't proof of anything except being able to
speak bravado.

Preparedness for emergencies requires planning ahead with the
possibility of unusual situations, the unexpected, but being able to
tie into the emergency preparedness groups of the local
infrastructure. There must be INTEGRATION. There must be
drilling for emergencies. Amateur communications groups must

be able to work with others that already exist, have planned, have drilled, are equipped, are integrated.

I have some knowledge of local emergency planning with the Los Angeles disaster facility and the integration of every group. I know that works because they've been tested and have performed well. I don't know fire department procedures well in detail.

>If a black or latino or female (or any other minority) is not interested in
>radio, then they aren't interested in radio. Nothing we can do will change
>that. It is called aptitude.

From what I've seen over a fifty year period ham radio seems more like a white male activity. I disagree with "aptitude" and can only conclude that exclusivity has played a greater role in keeping amateur radio for white males.

I'm not going to argue something that should be apparent on picking up random issues of ham periodicals from the last 50 years and profiling those amateurs who have their photographs in them. The overwhelming majority are white males.

>Alrighty..... think I stated this one before, and also, have you promoted
>the hobby to other non-caucasian and non-male persons?

I've not promoted anything. If anyone asks me what amateur radio IS, I will give them an honest answer based on my experience and observation. I won't try to "promote" something I am not IN, nor will I be any sort of proselyte mouthing jingoism as prescribed in the publications of a CT organization.

I look upon amateur radio as an interesting hobby that can be recreational. I don't look upon it as some military service surrogate. I don't look upon it as some noble, righteous cause for self-sacrifice to my community...or to be a vehicle for painting myself in patriotic colors for false braggadoccio.

>> >I guess in the meantime, I will continue to strive to positively change
>> >peoples negative or ignorance of what this hobby really is about.
>>
>> That's a laudible effort and should be applauded by hams.
>
>I beleive that is a component of the Amateur's Code, whether actually
>included in it, or an "unwritten" component.

The Amateur's Code can always be rewritten or modified. The original dates from 1928. It has already had a few changes in three-quarters of a century.

A problem with "unwritten codes" is that too many can do some "unwriting" to fit their own particular desires or opinions. It is better to have it all out in the open for ALL to see. Such a thing will work with non-hams to show the sincerity of hams.

>> I would caution some choices of words. Non-amateurs are able to
>> observe what the ham radio hobby "is about." It is out in the open,
>> nothing concealed, and well publicized in the ham radio area.
>
>Oh really??? Other than ham radio publications like QST, 73 and the like,
>you have to hunt high and low to find activity around here. My activities
>as Public Relations/Promotions manager with my club hopefully are changing
>some of that.

I should have written "unlicensed-in-the-amateur-radio-service" rather
than "non-amateurs." On the other hand, I've had more than a half
century to observe US amateur radio and individuals within it,
therefore I know where to look for information that a non-radio-
interested person might not know about. I will agree that general
information on US amateur radio is NOT well-publicized to the
general public.

>Of course they aren't stupid, but they may be ignorant of ham radio.
>Ignorant can have a different meaning depending on the user of the word. My
>definition of ignorance is "the lack of knowledge or information about
>something."

We are in agreement on that, certainly.

That's correct.

>I know of no other period in time that the FCC issued licenses without a code
>examination, unless it was prior to WW ONE.

FCC did not exist back then.
>
>> In 1975, the FCC proposed a restructuring that involved a "dual ladder"
>system
>> and no less than 7 (seven) distinct license classes. One of those classes
>was a
>> VHF/UHF entry-level license with no code test at all.
>
>Proposed? How does this deemphasize anything?

The fact that the FCC proposed a nocodetest license means they put less
emphasis on it.
It indicates where FCC thinking was back then.

In addition, the FCC ended code sending tests (less emphasis), allowed
multiple-choice
and fill-in-the-blank options for the code test (more ways to pass means less
emphasis)

and medical waivers. (much less emphasis). All BEFORE 1991.

The invention of CSCEs also reduced emphasis on code testing.

>"I propose that those without recent Novice subband experience be restricted
>from commenting on the ARRL Novice subband refarming proposal."
>
Is that a formal proposal?

Your proposals do not have the same credibility as the FCC's.

> should be doing for ham radio before he ever gets a ride into
> space.
>
I did a qrz.com database search, and there is no Lance Bass. He would
probably operate as a third party, just like the students who have
talked to astronauts in the past.

Even if Lance Bass himself never earns his ham radio license, the
experience would be a celebrity endorsement of ham radio. The grade
school and high school students he talks to would learn that ham radio
is what makes such conversations possible. Talking to Lance Bass
would be MUCH more exciting to the students than talking to other
astronauts. News coverage of this would be widespread, while news
coverage of other astronaut conversations with students is usually
spotty. The students would excitedly talk about this with their
friends. They would log onto N'Sync, Backstreet Boys, Britney Spears,
and Mandy Moore message boards and talk about this.

Our numbers would jump. Many people would be put off by the effort
needed to study for the exams, others would be put off by the upfront
cost of equipment, and others would be put off by the antennas needed,
but when you consider that no more than about .5% of people in the USA
are ham radio operators, it doesn't take much to produce a big impact.
I hope the ARRL, AES, HRO, and MFJ have thought about all this.

Think of the benefits to the hobby AND society of having so many more
hams:
1. More people for SKYWARN, RACES, ARES, and other emergency
operations

2. More demand for equipment would make it worthwhile for Yaesu, Icom, Kenwood, and other vendors to take advantage of more economies of scale. This means lower production costs and lower prices for all of us.
3. We would have better motivated students, as ham radio would give them more concrete motivation to learn subjects like math, science, and geography. Ham radio may even indirectly lead to better reading and communication skills.
4. There would be more people to talk to on the air.
5. More students would later become GOOD engineers.
6. Antenna restrictions would be subject to much-needed scrutiny if we had more hams AND a greater awareness of ham radio.
7. Manufacturers would do a better job of fighting RFI when designing equipment.

(sigh) Yea, I know it's illegal to sell an amp, Lelnad, and your
half-assed attempt at
snipping a post to make it appear as something else is old hat and
everyone is on to it.

>Just fess up Twisted that you got your tail caught in the door jam so
to speak, and it hurts. 8-))<<

More like YOUR tail, seeing as even the hammies are now calling you on
your poor technique of intentional snipping of posts to change the
context.

>It's fun to see to what ridiculous lengths Twsited with go to in
support of his half baked ideas.<<

There was no idea, just you being shown that your sorry and callous
attempts at causing trouble have the same effect you do in the rest of
your troubled life.....impotency.

> Besides all the time he wastes looking for back posts of mine in the archives>>

Oh, I don't look in archives, Lelnad, but I understand your attempt at
self-flattery at this stage in your anger-filled life...I merely save
your junk that is directed toward myself, such as the death threat
that got you dropped from supernews, your forge (the one that caused
your recent loss of UUnet), your multiple forges (ynn and newsranger)
and several others that were responsible for your lost access sites no
less than a dozen times last year.

>in the vain hope he find something to embarrass me with, or
responding to evey post I make, <<

Everything you say is BS. Tell you what, if it bothers you so much
that I reply to everything you post, try an injection of non-insultive
self-control, topic related, pertinent informative post that doesn't
illustrate your ignorance, instability, personal problems, or anger.

>keeps him inside and away from molesting the neighborhood kids.
--
Leland C. Scott
KC8LD0<<

You really must take a vacation, Lelnad. Such thoughts have an origination point, you may want to seek professional input, as the molestation of children is no joking matter, but anyone that is familiar with you is aware that such ideas from you are nothing new. Hell of an image you present to the public masses for amateur radio..as has been pointed out to you several times by cbers and amateurs alike...you are a part of the cancer that plagues amateur radio...it's a blight to the service that you even post a call next to your demented thoughts concerning children and sex. Couple that with your repeated calls for violence and the emerging image of you is crystal clear....perhaps a long rest is in order.
Now do what you do best, post a forge or 2 (I like the one where you have me talking to little green men) change the topic, and try to save what little face you have left, as your self-respect has left you long ago. Don't bother replying, you have shown your lack of communication skills,, I just wanted to share your unique elmering ways with the real amateur community. Have a good day.

Lennie, Lennie, LENNIE! Snipped the CONTEXT, which was your ERROR is
stating that you had your hands in a "space-borne" payload.

That WAS the phrase I quotation marked, Lennie. I know what a payload is,
Lennie. Too bad YOU don't seem to know what a SPACE-BORNE payload is.

>Full gloves or finger cots are always used on handling spacecraft
>components...(SNIP)

I imagine that's not all you use finger cots for, Lennie. Lotsa other
"small" components you have to deal with, no doubt. No doubt smaller than
usually expected.

>You may wish to understand "clean room" environments.

Why? Just so you can ramble on about a non-germane subject and hide your
once-again humiliating self-flagellation on RRAP?

>The information is out there. Please try learning something
>before writing.

Well, Lennie, perhaps YOU can learn something...I doubt it, but you should
read what YOU write before you send it, and make sure it addresses the post you
are responding to.

Not one thing you posted here was germane.

You ARE such an idiot. A PUTZ idiot, at that.

Steve

Okay. If that's your target audience for promoting amateur radio, no
problem to me. I think you would be doing ham radio a disservice
by that.

The truth is, we don't actually know for certain how the term "ham" came
to be applied to radio amateurs.

> Yes. All activities, professional as well as non-professional have
> cases of obsession. That other activities have such conditions
> is not an excuse or a rationale for continuation.

I've seen examples of such cases. There is, for example, a guy who
posts here on a regular basis who is not a radio amateur, has no

intention of becoming a radio amateur but is quick to point out to radio amateurs how insignificant they are. He actually believes that both radio amateurs and those interested in becoming radio amateurs should heed his view of something of which he has never been a part. Can you imagine such a guy? It would be impossible to fathom his obsession with ham radio.

No it does not. There are Asian, black, and Hispanic radio amateurs.
There are male and female radio amateurs. There are very young radio
amateurs. There are very old radio amateurs. Would it make you happy
if those of us who happen to be white, male and over a certain age wear
hair shirts as part of our penance?

If this newsgroup did not exist, Len, what outlet would you have found
for your periodic, lengthy rants?

No error. There are space-borne and engineering and test versions
of the same payload. In the manned space programs there are
"man-rated" payloads which may be handled by any gender.

There are also airborne electronics which are not handled by pilots
or aircrew.

Does the hyphen bother you? Hyphens may be removed without
any medical licensing requirements.

> That WAS the phrase I quotation marked, Lennie. I know what a payload

Lots of electronics is handled with various forms of body clothing
and contamination prevention...semiconductor wafers, hard-drive
assemblies, and quite a few RF transistor die. That includes
amateur satellite assemblies...those that are space-borne in
particular.

>>You may wish to understand "clean room" environments.
>
> Why? Just so you can ramble on about a non-germane subject and hide your
>once-again humiliating self-flagellation on RRAP?

What is "non-germane" about amateur satellite construction,
cleanliness in handling unpackaged semiconductor die and
wafers?

How are short circuits prevented in electronics required to work
in micro-gravity? Be specific in details of your response. That
applies to amateur radio satellites.

>>The information is out there. Please try learning something
>>before writing.

>
> Not one thing you posted here was germane.

In a way that is true. Most, if not all responses to von Brown should
be directed to the alt.mental-health.psychoses.chronic newsgroup.

Cleanliness in handling any small electronics is essential, especially
in surface mount technology, amateur radio satellites, and semi-
conductor wafers and die before they are packaged.

> You ARE such an idiot. A PUTZ idiot, at that.

This seems to be a standard "reply" by Wormser von Brown...neither
civil, gentlemanly, nor according to The Amateur's Code.

>Steve (Wormser von Brown, guru of AMSAT, ARISS, and AMISS)

Not any more so than its being up to the neighbors to get along with the ham living in their midst. My few neighbors don't paint their homes or landscape their yards in order to please me. I'm FCC licensed and my towers and antennas were put up in accordance with local zoning regulations. The neighbors don't get a vote. I know of two cases where neighbors moved into a neighborhood where active hams already lived. In both cases, the late comers attempted to whip other neighbors into a frenzy in attempts to have the radio amateurs remove towers. Those attempts failed in both instances.

Your "scientific process" obviously only consists of two steps:

1) Formulate a presumption based on your feelings about something
2) Conclude that this presumption is fact.

>You should try it sometime.

I'll stick with the scientific method that involves things like formulating a
hypothesis,
making observations, conducting experiments, and developing rigorous proofs and
definitions, thank you very much.

>Sorry, I do. Having handled enough, gone throught the MRBs,
>the project meetings, I'm acquainted enough.

Then on WHICH mission did you fly in order to have your hands in a SPACE-BORNE "payload", Lennie?

>Just how many has Wormser von Brown been through?

None. But then I didn't need to be to catch yet another Lenniesque faux pas in the newsgroup, now did I?

>> You ARE such an idiot. A PUTZ idiot, at that.
>
>This seems to be a standard "reply" by Wormser von Brown...neither
>civil, gentlemanly, nor according to The Amateur's Code.

Perhaps neither, however most appropriate when addressing a putz-like idiot such as yourself.

And as pointed out before, this forum is NOT "Amateur Radio", nor is it regulated by 47CFR Part 97, now is it, Lennie?

Stop lying.

Get your "facts" right.

Those two steps MIGHT get you some respect in this forum.

MIGHT.

Nope, you are obviously confused. You left out: Test the presumption against the evidence and if it doesn't fit, change the presumption and iterate.

Does Dick virtually always respond negatively to my postings? *Yes*
Is it probable that, "Well, there you have it", is a negative response rather than a positive response? *Yes*

> Ah, I see. You label all disagreement with you "negative", so obviously anyone
> who points out errors in your thinking is "negative".

I said I thought digital experimentation by hams is a good idea. Dick was negative about my statement indicating that he disagrees with digital experimentation by hams. This is not rocket science, Jim. Don't you think if that was a positive response, Dick would have said so?

I've had my say and I'm tired of trying to communicate with someone who is not making a good faith effort. Good luck on trying to convince anyone that, "Well, there you have it", is a positive response from someone who virtually never responds positively to any of my postings. Have a nice day.

A buddy here in Dallas needs cash fast and is offering me a Kenwood TS-950S with 4 filters for $1,000. I took my test gear over, checked out the rig, and it is in great shape, clean, nonsmoker. Is this a good price? I am not familiar with the market prices on this rig.

I am going to donate it to a totally handicapped ham who was my mentor in computer programming. He is a retired professor. I owe the guy a lot, as I came here not speaking English and now have a very secure job with a high-tech firm.

Thanks,

Ed "Beans" Hernandez

In article <3CDB397A.D2C5C128@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>In your vast experiences in amateur radio, which particular group of
>radio amateurs insist on dropping the term "amateur", Len?

Nearly all of them, based on both friendships and acquaintences
with those who have amateur radio licenses...and based on reading
a number of amateur radio publications over a 50+ year period.

>> The attempt to equate "professionalism" to an avocational
>> recreation is common among many amateurs.
>
>Really? On what knowledge do you base your sweeping generality?

The same as the first...although friends and acquaintences who are
ham licensees were already professionals in a profession.

>> See the ARRL definitions. The original term was coined BY
>> professional telegraphers as a negative description of amateur's
>> manual telegraphy skills...or lack of skills.
>
>The truth is, we don't actually know for certain how the term "ham" came
>to be applied to radio amateurs.

You can't find it on the ARRL website? If the ARRL states it, it must
be so...

>I've seen examples of such cases. There is, for example, a guy who
>posts here on a regular basis who is not a radio amateur, has no
>intention of becoming a radio amateur but is quick to point out to radio
>amateurs how insignificant they are.

If you are referring to me, then note that I point out things to
INDIVIDUALS WHO POST IN HERE.

You have a very thin skin, are prideful to a large degree, and cannot
stand to be corrected in anything. As a result you attempt
misdirection by claiming that I say "insignificance to all amateurs."

That isn't true.

Dave Heil does not represent all radio amateurs. He only represents
himself. He hides behind the association with amateur radio and
attempts to bully others who don't share his views. He implies his
views "represent the views of other amateurs" when that cannot be
proven.

Further, Dave Heil implies superior knowledge of amateur radio on
the basis of being licensed a relatively long time. That has no
basis on "knowing what is best for amateur radio," simply a claim
of long tenure...and has as its probable basis that whatever Heil
desires "should be that of amateur radio." Personal desire is not a
valid attribute for regulation that applies to all citizens...it is merely
an attempt at personal control for personal desires.

>> Not a "lie." Despite the spin used in the ARRL's descriptions of
>> what it "does" to publicize amateur radio, the fact remains that
>> the ARRL has NOT succeeded in achieving any significant impact
>> in the public mind about amateur radio in a half century.
>>
>> Denial of a clearly-observable fact is not an excuse/rationale.
>
>To whom is this "fact" clearly observable?

Obviously not yourself...but then Dave Heil is too locked into a
subjective, I-never-make-mistakes attitude that precludes any
hope of being objective.

The discussion within this thread concerned making amateur
radio activities known to the GENERAL PUBLIC.

The ARRL does well informing hams WITHIN amateur radio.
It does poorly on informing the GENERAL PUBLIC. They
are in a very good position to be influential about amateur
radio to the general public yet they cannot get into media any
better than the Academy of Model Aeronautics.

>I know there must be a point buried in your comment somewhere. I don't
>believe the public needs to be awed, only enlightened. To your puzzling
>statement about something being "proof of ONE activity", I can only
>write, "So?"

So stuff it, Dave, or try participating in a discussion. You haven't
done that in here in years. You get your jollies by bullying others
who don't share your views or admire your accomplishments.

>So you're telling us that we need hundred of articles about amateur
>radio in order to make an impact.

I've never stated a number. HOW you get amateur radio exposure
before the GENERAL PUBLIC is not a concern. ANY way is always
better than none.

The general public is simply not that aware of amateur radio
activities.

>Or maybe you're telling us that a
>small group of evil editors is force-feeding the public stories which
>are not really newsworthy.

In real-life journalism, every day, all over the world, the items in a
newscast or set in type and printed on paper is the result of

selection by a very few individuals who work under the title of "editor." That's not an "evil" thing, it is common practice in the free world, normal, SOP.

Every news item that you hear, see, read is SELECTED. By a very small minority in all of journalism.

One purpose of public relations is to convince editors that a PR item should be SELECTED. That's a "selling" task.

If a PR piece is selected, the PR item becomes a part of the news. If not selected, the readers-viewers-listeners will never find out about it. "News" does not appear out of thin air. It is SELECTED.

>No it does not. There are Asian, black, and Hispanic radio amateurs.
>There are male and female radio amateurs. There are very young radio
>amateurs. There are very old radio amateurs. Would it make you happy
>if those of us who happen to be white, male and over a certain age wear
>hair shirts as part of our penance?

I wrote that any observation of photographs of radio amateurs in any amateur radio periodical of the past half century will show that the OVERWHELMING MAJORITY are male and white. I added that they TEND to appear as middle-aged in their appearance.

There ARE exceptions. Exceptions' existance only proves that exceptions exist.

The OVERWHELMING MAJORITY are male and white. That cannot be denied on the basis of photographic evidence.

There are NO requirements for fashions in clothing. Heil has the option to wear anything he wants. One problem is that he puts on "emperor's new clothes" and cannot realize he is naked.

Not me. It's clear to any objective observer that the above is what
you
do. Cecil.

> You left out: Test the presumption against
> the evidence and if it doesn't fit, change the presumption and iterate.

I didn't leave it out.

> Does Dick virtually always respond negatively to my postings? *Yes*

Whoa, hold it right there. What do you mean by "respond negatively"?

> Is it probable that, "Well, there you have it", is a negative response
> rather than a positive response? *Yes*

Depends on how you define "negative response", which you have
carefully avoided.
Most important of all, "probable" does not equal "proof". Particularly
in this case.
>
> > Ah, I see. You label all disagreement with you "negative", so obviously anyone
> > who points out errors in your thinking is "negative".
>
> I said I thought digital experimentation by hams is a good idea.

Of course it's a good idea. That's a "mom and apple pie" sort of
thing. All
sorts of experimentation by hams is a good thing.

> Dick was negative
> about my statement

Where? How? You presume that because W0EX disagrees with you much of
the time,
he must disagree with you all of the time. Even when he makes
statements
like "well, there you have it", you label those statements as
"negative"
based on YOUR prejudice.

> indicating that he disagrees with digital experimentation by
> hams.

Only to you.

> This is not rocket science, Jim.

Then why are you having such a tough time with it, Cecil? You say that
there's
lots of evidence in W0EX's posts, but when challenged to actually
provide
some, you dig up a single ambiguous statement and refuse to provide
anything
substantial.

> Don't you think if that was a positive
> response, Dick would have said so?

All depends on whether he is reading this exchange and whether he is
able
to reply. I have not seen ANY rrap posts by W0EX in the past several
days. He
could be away from his computer.

> I've had my say and I'm tired of trying to communicate with someone who is not
> making a good faith effort.

That would be you, not me.

> Good luck on trying to convince anyone that, "Well,
> there you have it", is a positive response from someone who virtually never
> responds positively to any of my postings.

You are the one who has something to prove, not me. So far you have
not
proven anything, except perhaps that you are not serious about the
subject
at all.

It is interesting to read the comments to RM-10413. The only denizens
of rrap
who have actually filed comments are K0HB, W3GEO and myself. W0EX said
he
would "sign on" to the ideas presented by Hans and myself, supporting
the idea of refarming the Novice bands to experimental use.

Perhaps there are others who have filed comments, but so far they have not shown up in searches of the ECFS system.

>Have a nice day.

I plan to.

Check ebay.com for what that rig fetches in auctions.
But being able to inspect the rig in person removes
some risk and would be worth a somewhat higher price.
I paid about $700 for a TS440SAT a few years ago, but
that one is less desirable because of a flaky keyboard.

> Ever listen to ball games on a broadcast receiver?

Yes. I happen to like to watch Atlanta. Not carried up here in New York. I paid $130.00 one year for the baseball pass on Direct Tv, but managed only to watch 3 extra games. 3 games at $130.00 is not, IMHO, a very good deal. Living in the city, external antennas worth much at AM broadcast frequencies is not going to cut it - and I don't feel like pulling that old boat anchor SP-600 down from the attic either.

Ok, so where did I say the Internet should be banned? Gimme a break!

> Yes, just like 10 million folks in my neighborhood "always had their
> radios working" during the Northridge Earthquake and the subsequent
> cutoff of ALL electric power. Everyone did NOT have enough batteries.
> The no-charge-to-listener broadcast stations all had emergency
> generators.

Glad they did. They mostly didn't here in NY during the great Northeast blackout in 1966. I remember. I was in college. Only could pick up WKBW in Buffalo, and they had to talk. The emergency generators were

not holding speed and the turntables sounded terrible. That was the
ONLY station we could pick up. Please understand, this is the new age.
I worked for WOKR TV here in Rochester back in 1971. I'm glad I left.
They let most of the engineering staff go. They are fed from Syracuse.
Only the news is live, so much of the staff went. Of course, in an
emergency, they could likely call in their staff - assuming they could
get there. The Syracuse station feeds all of the stations that are
owned by whatever corporate entity owns them.

> in 1994?

Now, we try this old CW bit again? The big ice storm Northeast of here
sure was interesting a few years back. One of the police departments
was temporarily hooking into an amateur repeater. Their tower was
taken down by ice. Truckloads of batteries, medical supplies, etc. was
being shipped up there. My grandmother's sister's daughter (gosh, what
does that make her to me?) was without heat, electricity, and telephone
for over a week in Gouverneur. It isn't that the amateur stations are
better, it is a case of a lot more hams than commercial communications
towers and the amateur towers are invariably much smaller may well
withstand winds and ice that the huge arrays won't

Good for him. Myself, I've got 11 days and I'm 55 and can retire. I'll
keep plugging for a couple of years, then I'm looking to Florida. Power
and taxes are too high here. The power brokers can fight over what's
left. I'm gone.

> retirement.

Fantastic. I enjoy the Internet quite a bit myself. I will admit to overstating a bit, but am a little apprehensive about some of the goings-on. I always have the firewall and anti-virus running. Other than that, for one of my age, the Internet is reasonably safe (although I've used the Internet for paying bills, I'm starting to revert to snail mail. Something about my mother receiving a dunning letter demanding $12,000.00. A bit disquieting, although an attourney is getting things straightened out).

> Aren't you into some gross exaggeration there? Yes, four out of five
> households in the USA do NOT have Internet access. Three out of

> deemed desireable by the public, they will be purchased.

I have been overstating (as I mentioned) a bit. I do hope I am wrong here. Ummmm ... do you remember in the 50s, 60s, and early 70s, one working member of the family could support the family? Now, everyone is concerned about the cost of day care. I wonder why? Real wages have been slipping. While the feds have been cutting income tax (mostly at the top end), they have been grabbing revenue from cigaretts. Funny, a lot of counties around here spend NONE of that money on anti-smoking ads nor health care. Our county (Monroe) got a grade of 'C' because they spent all of $500,000.00 out of $11,000,000.00 on health care. I wish I could get a 'C' for classes when I scored 5% on a test!!! Of course, we have that fantastic lottery .... the state simply cuts back on its' education budget by whatever the lottery takes in. A couple of years back, the board of education found out that children had to leave textbooks in class for others to use. There wern't enough to go around. I wonder why we have a problem in this city? Now, they have a $65 MILLION dollar deficit. Nice. Glad to see this state joining other states in the Powerball! More money, which will be shuttled elsewhere. Let's see ... a new ball stadium, now they want to build another ball stadium for the Rhinos (soccer). They want to build a high-speed ferry between here and Toronto. School books? You've got to be kidding; besides, in the words of the commisioner of education, 'we didn't promise how good the education will be'. So, yes, perhaps my view is a bit different than yours.

> You can delude yourself all you want on demanding folks "work"
> for everything...just like you did when younger? Sounds like an
> old whine uncorked every generation by forty- and fiftysomethings
> crying in their drinks. That sort of whining was something done in
> the ancient city of Pompeii, too.

You misunderstand. I consider as work, anything which produces value. This would include engineering, doctors, and lawyers. Problem is, if everyone wants to be a lawyer, what are we going to do? Sue each other?

Everyone seems to want to buy and resell something and not actually produce anything. THAT is my concern.

> You stay on the thought that amateur radio is all about "work"
> and manual-everything. You can add generating your own
> electricity, too, since the electric power is from a dreaded infra-
> structure utility. That isn't free.

No, as I explained, not 'manual everything'. It is about producing something of value. We depend largely on that infrastructure since it is MUCH more efficient than we can be as individuals. It does help to be prepared if that infrastructure should fail for whatever reason. I was on AT&T and lost internet access for a week due to 9/11. NYC has a LOT of that infrastructure there and AT&T got hurt a bit. We've had telephone, power, and cable fail during the ice storm of 91. Myself, I'm not a proponent of CW, but do believe in having some kind of backup. When we moved our work location some 4 miles, we had problems in the new building. The public phones didn't work, and then we lost the business phone. People were scrambling to borrow other folks' cell phones. Myself, I simply went to my locker, pulled out the HT, punched the appropriate buttons, and was on the telephone. Obviously, I can skip the telephone part if I wish. BTW, as I type this, I've got two computers on the desk, one HT, and 40 (forty) brand-new aa alkalines sitting in front of the one PC. There are 6 fresh batteries in the HT. Oh yes, the NiCad is also sitting here, fully charged.

3317. FCC Proposes two new ham bands, plus increased status on 2400MHz

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-10 19:03:27 UTC
From: K&#65533;HB <KAYZEROHANDSOMEBOY@ELECTRICSMOKE.NET>
Message-ID: <3QUC8.590$xI6.451@newsread1.prod.itd.earthlink.net>
Source record: 42586

From ARRL bulletin ARLB028

Good news for ham radio this week! FCC has proposed going along with ARRL's request for a new domestic (US-only), secondary HF allocation at 5.25 to 5.4 MHz. The FCC also is ready to permit operation on a 136-kHz ''sliver band'' in the low-frequency (LF) region. And, in response to a third ARRL request, the FCC has proposed elevating Amateur Radio to primary status at 2400 to 2402 MHz.

''I'm just as tickled as I can be,'' ARRL President Jim Haynie, W5JBP, said upon hearing the news. ''This is a classic example of our ARRL at work.''

The FCC voted unanimously May 2 to adopt the Notice of Proposed Rulemaking in ET Docket 02-98. The Commission released a Public Notice May 9, and the NPRM is expected to be released soon. A comment deadline will be announced as soon as it's available.

The FCC said the new 5-MHz band would help amateurs ''better match their choice of frequency to existing propagation conditions.'' The band, if approved, would be the first new amateur HF allocation since World Administrative Radio Conference 1979 gave amateurs 30, 17 and 12 meters--the so-called ''WARC Bands.'' Assuming the 5-MHz band eventually is authorized, it could be a few years before it actually becomes available.

The League said its successful WA2XSY experiments demonstrated that amateurs can coexist with current users and that the band is very suitable for US-to-Caribbean paths. In comparisons with 80 and 40 meters, the WA2XSY operation also showed the 60-meter band to be the most reliable of the three. The ARRL also argued that a new 150-kHz allocation at 5 MHz could relieve periodic overcrowding on 80 and 40.

If allocated to amateurs on a secondary basis, hams would have to avoid interfering with--and accept interference from--current occupants of the spectrum, as they already do on 30 meters. The band 5.250 to 5.450 MHz now is allocated to Fixed and Mobile services on a co-primary basis in all three ITU regions.

The ARRL asked the FCC for two LF allocations in October 1998--135.7 to 137.8 kHz and 160 to 190 kHz. The FCC said its action on one part of that LF request proposes changes that would enhance the ability of amateur radio operators to conduct technical experiments, including propagation and antenna design experiments, in the 'low frequency' (LF) range of the radio spectrum.''

Several countries in Europe and elsewhere already have 136-kHz amateur allocations. The first amateur transatlantic contact on the band was recorded in February 2001.

Hams would be secondary to the Fixed and Maritime Mobile services in the 136-kHz allocation. The League said its engineering surveys suggest that hams could operate without causing problems to power line carrier (PLC) systems already active in that vicinity or to government assignments. Unallocated Part 15 PLC systems are used by electric utilities to send control signals, data and voice.

The FCC said its proposal to upgrade the Amateur Service allocation at 2400 to 2402 MHz to primary ''seeks to protect current amateur use of this band.'' Hams have shared their other 2.4 GHz spectrum on a secondary basis with government users.

Amateurs already are primary at 2390 to 2400 and from 2402 to 2417 MHz. The ARRL has said primary status in the intervening spectrum slice was needed ''to provide some assurances of future occupancy of the band segments for the next generation of amateur satellites.''

The ARRL has expressed its belief that hams can continue to accommodate Part 15 and Part 18 devices at 2.4 GHz.

3318. FISTs on 20m

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-10 21:33:07 UTC
From: Dan Finn <djfinn2@bellsouth.net>
Message-ID: <3CDC3C93.6040802@bellsouth.net>
Source record: 42587

I had not been using code for the last 4-5 years so I tuned into 14057 today and heard a lot of "CQ FISTs". I remember this NG back about 7 years ago and the Morse Code wars and how we ultimately lost the battle to a 5 wpm slow (no) code requirement. It seems that back then, FISTs was a very small organization and by the end of the code war I had assumed they would ultimately disband (so to speak). Not so! They are still here, stronger than ever. It must be a much larger organization now.

Way to go FISTs!

I remember the somewhat humorous "fighting" call of we coders:

"No code, no code rah rah rah. dididit dididididit ditdit dah"

Good to see all that code activity on 20m. I think I'll dig out my good ole' straight key and get back to real HAM radio again. I just want to get away from all those CBer qrmers and other low lifes, at least once in a while, on the voice bands where a few fortuitous hams the FCC are trying to save this declining resource.

I think that, ultimately, FISTs will be the one to save real HAM radio. No decadent CBer qrmers on the code sub-bands!

GO FISTs!

73,

de KR4AJ

Here in UK such a rig would probably fetch around the equivalent of US$1000,
but we pay too much for rigs here.....

Not so. I also see comments from K7JEB, WA2ISE, K0CKB, K6JQ, and KT4ST.

All of these have also recently posted on rrap.

Ryan,

40 is my favorite band, followed closely by 80. (CW) I find the hams operating there to be very considerate and courteous. YMMV, of course.

Just wondering why you singled out those bands.

Couple of points in response to your broad-brush rant about HF
operators.......

FCC (Riley) has lately been citing more 2m FM operators for interference,
lack of manners, and other assorted mischief than he has HF operators.

Your HF receiver hears the whole world, your 2m receiver hears maybe a
couple of counties.

> I didn't leave it out.

Of course you did. The proof is just above. In which step, 1 or 2, did you
include a test and iteration? Forgive me for asking but I just don't see it.
The fact that you alluded to it later in the posting doesn't matter. I was
talking about your steps 1 and 2 above.

> > I said I thought digital experimentation by hams is a good idea.
>
> Of course it's a good idea. That's a "mom and apple pie" sort of
> thing. All sorts of experimentation by hams is a good thing.

But Dick responded, "Well, there you have it", exactly as I knew he
would. That's why I posted the troll - to provoke Dick into showing
his true colors. You are defending an indefensible position, Jim,
and losing respect in the process. Please forgive me because I didn't
plan for that to happen. I had no idea your agenda ran so deep. You
appeared to have adopted a rational stance since the restructuring
but now that appears to just have been posturing.

> > Don't you think if that was a positive response, Dick would have said so?
>
> All depends on whether he is reading this exchange and whether he is
> able to reply.

Awwwhhhhhh Bull$hit, Jim! Dick could have simply said, "I agree", instead
of, "Well, there you have it". Dick is obviously against digital experimentation.
Your support of Dick's position means that you are against digital
experimentation. I am extremely surprised by your support of such a position.
Is this part of the hidden agenda of the PCTA or did you have a mental lapse?

> > I've had my say and I'm tired of trying to communicate with someone who is not
> > making a good faith effort.
>
> That would be you, not me.

You are entitled to your obfuscations. Everyone who has been following this thread knows differently although obviously members of the anti-digital crowd won't admit it.

> You are the one who has something to prove, not me. So far you have not
> proven anything, except perhaps that you are not serious about the subject
> at all.

Let me leave you with this parting thought, Jim. When you defend someone who is a known and well-defined problem within the ARS, you become part of that same problem. I am really disappointed with your defense of an anti-digital position.

> Perhaps there are others who have filed comments, but so far they have
> not shown up in searches of the ECFS system.

What does it matter? The FCC is going to do what they consider best for the ARS. The individual opinions of individual hams doesn't matter a whit. The FCC is not going to allow the inmates to run the asylum. The Novice band restructuring will not be an experimental band. More probable is allowing broad band digital signals in the phone bands. Try a top-down approach instead of a bottom-up approach next time. That's what the FCC does.

I have a maxed-out TS-940SAT which is the predecessor of the 950. And
before the 940 there was the TS-930 which first hit the shelves in the
late 1970s. The whole family of TS-9x0 HF xcvrs all defined the high
end of competition-grade HF xcvrs in their times and to this day will
still hold their own *very* well in the contests and pileups.
>
>
My ancient 940 is currently worth around $900. $1,000 for a 950 is a
bloody steal, the things were in production until about four years
ago.

jason_hsu@my-deja.com (Jason Hsu) writes:

>> It would appear that there is a whole lot Lance Bass can and
>> should be doing for ham radio before he ever gets a ride into
>> space.
>>
>I did a qrz.com database search, and there is no Lance Bass. He would
>probably operate as a third party, just like the students who have
>talked to astronauts in the past.

Jason:

Same here, couldn't find him on QRZ. I don't think that Lance's operation
as a third party aboard the ISS would have quite the same positive impact
on the hobby as if he were to go and get his own Tech license before
making the trip. If he *IS* being considered for a trip to the ISS, then I
would hope that the ARRL would get a hold of him and attempt to give him
a fast education on ham radio and a Tech ticket before the countdown
reaches "zero."

>Even if Lance Bass himself never earns his ham radio license, the
>experience would be a celebrity endorsement of ham radio.

I disagree, it would merely be a celebrity talking to kids on the
ground, using *A* radio. May as well be Verizon Wireless for all they
would know or care -- unless Mr. Bass himself became a licensed
amateur and his fans knew that he did this so he could talk to them
from the space station.

>The grade
>school and high school students he talks to would learn that ham radio
>is what makes such conversations possible.

Only if Mr. Bass spent the majority of his "airtime" slamming that point
home, which I'm sure wouldn't happen. However, his actually BEING a
licensed ham, and the pre-spaceflight publicity of his licensing process
would have some of the desired effect you speak of.

>Talking to Lance Bass
>would be MUCH more exciting to the students than talking to other
>astronauts.

No doubt about that, but ask them HOW they were able to talk to
Lance the next day, and you'd probably get something like "on a radio"
or "on the phone," or, at worst, "on the CB radio."

>News coverage of this would be widespread, while news
>coverage of other astronaut conversations with students is usually
>spotty.

You mean there was actually news coverage of the students talking to
astronauts? Where? When?

>The students would excitedly talk about this with their
>friends. They would log onto N'Sync, Backstreet Boys, Britney Spears,
>and Mandy Moore message boards and talk about this.

Sure they would, but I have my doubts that the main topic of the
discussion would be the METHOD of the conversation with Lance Bass,
just THAT they were able to talk to him while he was in space. The
medium would definitely NOT be the message in this instance.

>Our numbers would jump.

Such blind optimism -- you really should run for ARRL Division Director.

>Many people would be put off by the effort
>needed to study for the exams, others would be put off by the upfront
>cost of equipment, and others would be put off by the antennas needed,

And after three "put offs," they would be "put out," as usual.

>but when you consider that no more than about .5% of people in the USA
>are ham radio operators, it doesn't take much to produce a big impact.

Jason, we'd need 10% growth in the next few years just to cover our
losses from the Old Timers timing out on us. My small club has had
about a half dozen SK's in the last two years -- our budget is becoming
depleted from buying flower arrangements! Two of the SK's were No-Code
Techs who became hams within the last five years.

> I hope the ARRL, AES, HRO, and MFJ have thought about all this.

I'm sure they think of it a lot. However, they're not doing anything
about it other than impose the responsibility for recruitment of new
hams directly on the shoulders of existing hams. Where is MY
motivation to secure the financial future of the ARRL and the equipment
manufacturers/retailers?

>
>Think of the benefits to the hobby AND society of having so many more
>hams:
>1. More people for SKYWARN, RACES, ARES, and other emergency
>operations

Ahhhh, the "Ham Hero(ine)™" motivator. Unfortunately, most of those
who get sucked in by this already have their Tech license, a belt full
of HT's, an International Orange jumpsuit full of patches, and a 4-wheel
drive vehicle with a yellow light bar on the roof.

>2. More demand for equipment would make it worthwhile for Yaesu,
>Icom, Kenwood, and other vendors to take advantage of more economies

>of scale. This means lower production costs and lower prices for all
>of us.

I'm pretty sure we'd have to just about double our numbers for this
to actually happen. The more likely scenario is that a scarcity of
ham gear would cause prices to go UP.

>3. We would have better motivated students, as ham radio would give
>them more concrete motivation to learn subjects like math, science,
>and geography. Ham radio may even indirectly lead to better reading
>and communication skills.

Ever listen to a bunch of teen-aged "hams" having a "homework net"
on a local repeater? Kept me on my toes as a control operator, since
I'd end up shutting the machine down after the third "f" word that slipped
out, and then issuing a verbal warning through the UHF control link
audio path. Communication skills. Right.

>4. There would be more people to talk to on the air.

Talk? What about this "digital revolution" we were promised with the
No-code Tech ticket and Restructuring? Wouldn't they all be on
high-speed packet, PSK-31, PACTOR, etc?

>5. More students would later become GOOD engineers.
>6. Antenna restrictions would be subject to much-needed scrutiny if
>we had more hams AND a greater awareness of ham radio.
>7. Manufacturers would do a better job of fighting RFI when designing
>equipment.

Man, I don't know how much more of this sunshine I can stand! All
of this because some pop-culture punk has a few QSO's with some
screaming teenagers from a space station?

Larry,

I see that phrase a lot, usually when someone wants me to donate some money, or run for club office, or 'guilt' me into some other action which I might not have otherwise engaged on my own volition.

OK, here comes a serious question, for which I'm not sure that I know the answer. Now you can flame me to a crisp, or we can have a discussion.

I see a lot of hams, having a great time at the hobby, enjoying themselves, maybe getting smarter by virtue of their curiosity in areas like technology, propagation, or simply engineering a better station to win in a radiosport contest, but not necessarily "giving something back".

Are they good hams?

Any idea of what the band plan would look like? Tuning around there
now (late night) I find what sounds like FSK between 5.33 and 5.4MHz.
And some SSB (in some foreign language) near the low end of this band
earlier.
We wouldn't talk with these users, but would it be better to put our
digital modes up with theirs (less interference?) and our voice down with
theirs, maybe the other sideband to minimize QRM? Or would that
make it worse?

Comment...I hadn't thought of this before (and sorry to change the subject) but I think this means we can add amplifiers to some of our common household 2.4 GHz devices such as cordless phones and wireless notebook adapters and transmitters as long as we have a ham license, provided we ensure that the transmitting frequency falls within the allocation. Sorry Hans, not a troll so you cannot use your fantasy toy, the troll o meter with the stingy "S-meter". Guess it doesn't work at 2.4GHz.

Interesting concept. Seems to open up several legal avenues for creative UHF hobbyists. Just be a bit careful with the m-wave radiation keeping in mind the well-known safety limits.

I've been reading most national and several regional amateur radio
periodicals for over 40 years and I'll wager I know more hams than you
do. I've not read or heard anything like you've described.

> >> The attempt to equate "professionalism" to an avocational

Your lenses are fogged. Your statement is a sweeping generality,
unsupported by fact.

> >> See the ARRL definitions. The original term was coined BY
> >> professional telegraphers as a negative description of amateur's

> be so...

I'm basing my statement on my reading over the past forty or so years.
There are several ideas on how the term came to be used but there is no
definitive answer.

> >I've seen examples of such cases. There is, for example, a guy who

I've noted a number of YOUR postings which take shots at radio amateurs IN GENERAL. Would you care for a sample from google or do you have enough CINC-as-Navy-only egg on your face?

> You have a very thin skin, are prideful to a large degree, and cannot

I've never claimed to represent all radio amateurs. In fact, I've stated on a number of occasions that I speak only for myself. I don't hide behind anything at all. If you feel bullied, I suggest that you adopt a mechanism for coping with your feelings.

> Further, Dave Heil implies superior knowledge of amateur radio on

I've not implied knowledge of amateur radio superior to your own, Len. I've stated that my knowledge of amateur radio, attained over the course of four decades involvement is superior to yours. For you to claim that my statement isn't true would make you look like a complete boob.

> >> Not a "lie." Despite the spin used in the ARRL's descriptions of

I've read a number of pieces on amateur radio in newspapers and magazines. I can't recall ever seeing such a piece on model aeronautics. Could it be that you made up your "facts" based on your own lack of knowledge?

> >I know there must be a point buried in your comment somewhere. I don't

We agree on that. It wasn't too clear from your statement.

> The general public is simply not that aware of amateur radio
> activities.

We disagree on this one. Some percentage of the public doesn't know much or anything about amateur radio.

> >Or maybe you're telling us that a

As the son of a fellow who spent twenty years in the newspaper game, I'm aware of how things work in a newsroom. Perhaps you've stumbled on a new avocation. In addition to being an uninvited advocate for change in amateur radio, you could play a role in fighting for the right for the public to vote on what is seen in magazines and newspapers.

> >No it does not. There are Asian, black, and Hispanic radio amateurs.

> exceptions exist.

The exceptions prove that anyone who chooses to become an amateur radio operater can do so. Quit acting as if there is a problem with someone being white and male.

> The OVERWHELMING MAJORITY are male and white. That cannot
> be denied on the basis of photographic evidence.

It isn't denied at all. It is simply that you state it as if there is a problem. Those drawn to amateur radio are drawn to amateur radio. Ham radio is no more expensive than many other interests. I'd wager that most flying model enthusiasts are also overwhelmingly white, male and middle aged. I'd say the same is true of golf. What are you, Len Anderson going to do about it?

> There are NO requirements for fashions in clothing. Heil has the
> option to wear anything he wants. One problem is that he puts on
> "emperor's new clothes" and cannot realize he is naked.

I'm not exactly sure what this is supposed to mean. Would you like me to start describing what I'm wearing when typing responses to your posts? I don't want to start feeding your fetishes. You, after all, are the one parading about the newsgroup as expert in amateur radio. Those clothes don't fit you.

> Oh... You didn't know how to get on HF?

Yep, I didn't know how to get on HF. My Elmer, W5OLV, told me what transmitting equipment to buy and designed all my antennas for me. I bought 100 ft. of RG-11 and only needed about 60 ft. I didn't want to cut that 100 ft. run in the middle so I asked Shorty if rolling up the excess behind my ham desk would be OK. He said it would so I had a choke on my coax feedline and didn't realize it. He told me how long to make my 40m dipole. I put it up at ten feet and it didn't work very well. I told Shorty it wasn't working very well and he suggested I raise it to 20 feet at which height it worked very well. I had no clue as to why I raised the antenna.

There have always been totally ignorant people getting their ham licenses, at least ever since 1952 when I gained all amateur frequency/power privileges without knowing the first technical thing about ham radio. The brighter a potential ham is, the more of the material he/she is capable of rote-memorizing so don't sell him/her short. The more material a person is capable of rote-memorizing, the greater the brain power, and the greater potential that person has for the future.

Source record: 42671

Can a person improve sending speed when using paddle type keys instead of a straight key? Or is there a type of straight ket more suited to higher speeds? My old straight key, which I have mounted on a block of wood, and for which I paid $10.00 new in 1993 has been fairly reliable but the mechanism has too much damping to allow much more than 18 wpm. Any advice from coders would be appreciated. Thanks in advance.

Also, is it against Part 97 rules to transmit CW in the voice sub-bands?

Will there be a CW sub-band in the new 60 meter band? Thanks,
de KR4AJ

> Can a person improve sending speed when using paddle type keys instead
> of a straight key? Or is there a type of straight ket more suited to
> higher speeds?

My preferred Morse instrument is a Vibroplex bug, also called a "speed key"
for a reason. I can clip along much faster on that than I can on a straight
key, and with a lot less wrist fatigue. Paddles can be even faster, but
require an electronic keyer (most modern rigs have one built in).

> Also, is it against Part 97 rules to transmit CW in the voice sub-bands?

It isn't strictly against the rules, because Morse is allowed in virtually
all amateur allocations, but it is bad manners to ignore bandplans.

> Will there be a CW sub-band in the new 60 meter band?

I don't know (I haven't seen the NPRM) but I presume there will be.

73, Hans, K0HB

NOTICE: Rick, Mike and I are taking the motor home driving to the Dayton Hamvention and wont be back home until Sunday night. I won't be able to post the next ARNewsline until Monday May 20.

Amateur Radio Newsline™ Report 1291 - May 10th 2002

Amateur Radio Newsline™ report number 1291 with a release date of Friday, May 10th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Mark Shuttleworth returns to Earth after his ham radio odyssey in space. This story is first on Amateur Radio Newsline report number 1291 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: MARK SHUTTLEWORTH RETURNS TO EARTH

South African space explorer Mark Shuttleworth was greeted with Easter eggs and cake as he returned to earth on Sunday May 5th, This, after a ten day stay on the International Space Station that he called unforgettable. And ham radio operators around the world will remember his trip for a long time as well. Amateur Radio Newsline’s Roy Neal, K6DUE, has the wrap-up on Mark Shuttleworth’s ham radio space odyssey:

--

"Every second will be imprinted and will be with me for the rest of my life.”

Those were the words of a happy Mark Shuttleworth as he was carried away from the Russian Soyuz capsule that brought him and two fellow passengers back down to earth in Kazakhstan on Sunday, May 5th at 7:51 a.m. Moscow time. Before his return to Earth, Shuttleworth delighted hams around the world when he showed up on the air and made numerous random contacts. In short order he was working them like a D-Xpedition pro. Listen:

--
contact audio here
--

That recording was supplied by Stan Vandiver, W4SV. We compressed it to give you a glimpse of the way Mark Shuttleworth took to ham radio and the way that ham radio welcomed him.

One ham lucky enough to record both sides of his contact with Shuttleworth was Al Lark, KD4SFF. Using the Experimenters Group Amateur Radio Club callsign N4ISS mobile, Lark spoke with Shuttleworth on May 1st at 9:20 A-M Eastern Daylight Time:

--
Contact audio here
--

According to Lark, that contact was made from his work van during coffee break in downtown Greenville, South Carolina.

Mark Shuttleworth's operation from the International Space Station was made possible by ARISS. Amateur Radio on the International Space Station. Amateurs from nine countries, in the USA, Russia, Japan, Europe and Canada, have set up ARISS, to design, build, maintain and supervise all operations of the amateur radio station aboard the ISS,

For the Amateur Radio Newsline, Roy Neal, K6DUE.

--

Shuttleworth is the second person to pay Russia for a trip to the I-S-S. The first was U.S. businessman Dennis Tito, KG6FZX, who travelled to and operated from the space station a year ago. (ARNewsline™ with audio supplied by W4SV and KD4SFF)

**

HAM RADIO IN SPACE: THE OTHER HAM IN THE CREW

Almost lost in the shadow of Mark Shuttleworth is Italian Astronaut Roberto Vittori, IZ6ERU. Vittori was a member of the crew that brought a new Russian built Soyuz escape vehicle and explorer Mark Shuttleworth to the ISS. And while on board the space station, Vittori also took to the air in his native Italian using the ARISS station:

--
Vittori audio here
--

That recording was made by IT9GSV as Vittori was flying over Rome. Among the other contacts Vittori made was one with a school in the town of Malignani on May the third. (Tnx: IT9GSV, IK1SLD via SAREX Remailer)

**

HAM RADIO IN SPACE: TEEN IDOL MAY BE NEXT SPACE TOURIST

The next space tourist to visit the International Space Station could be a teen heart-throb. Lance Bass, one-fifth the teen pop group *NSYNC, says that he has passed his first battery of tests in his effort to fly into space on a Russian spacecraft later this year.

In a recent television interview, Bass said he is attempting to keep time free during the bands current tour so he can participate in additional medical tests

in the U.S.. If they go well, Bass says that he will be heading back to Russia to see if he can qualify for a fall mission to the ISS.

Bass was in Russia last March to undergo an initial series of physical tests. The 22-year-old pop singer's is attempting to qualify for a seat on the Russian mission that's set to launch on October 22nd and return to earth on November 1st. If Bass is approved to fly, it is not known if he would have time to study for a United States Amateur Radio license or if he would be interested in using the ham gear on board the ISS.

By the way, the same news report says that Bass' trip to the Star City Cosmonaut Training Center was paid for in part by Radio Shack. Last year Radio Shack filmed a television commercial aboard the international space station. (Published news reports)

RESCUE RADIO: AMATEURS MUSTER FOR WEATHER EMERGENCIES

The ARRL Letter says that Amateur Radio Emergency Service teams activated or stood by to assist as severe weather struck several states in late April. The National Weather Service said storms over the weekend of the 27th and 28th left pockets of devastation from Kentucky to Maryland. Amateur Radio Newsline's David Black, KB4KCH, picks up the story from here:

--
La Plata, Maryland was hit hard April 28th when an F5 tornado roared through the town's business district. This time, the agencies that normally help during disasters were themselves hit. The local American Red Cross chapter office and a building housing the Charles County Emergency Operations Center were damaged.

Tom Abernethy, W3TOM is ARRL's Maryland Section Manager. He says Michelle Sack, N3YRZ, who was on duty at the LaPlata hospital broke into a SKYWARN net to report a tornado. Sack reported a the massive storm was only one-half mile away to the west and heading directly for her location.

Sack tracked and described the tornado until it struck and then continued to provide on-the-scene assessments. Other amateurs along the storm's track also provided reports on severity and damage.

Mike Tackish, KA3GRW is the county's ARES Emergency Coordinator and RACES officer. He activated the local ARES and RACES team's emergency operations. Hams set up a command and control net on UHF, and used VHF channels to supply

communications for the hospital which lost telephone service and internal communications. Hams also helped the Red Cross with communications.

Hams were also busy helping the National Weather Service as the agency conducted a follow-up investigation of the tornado which had winds of around 260 miles an hour.

Also on the same date, hams in Kentucky were busy when severe weather struck that state. Radio amateurs used a wide area repeater net to relay important information to help the Weather Service and the Meade County Emergency Management Agency.

Weather service forecasters wound up issuing a Tornado Warning based on reports from radio amateurs. One person died, with homes in the Irvington area being damaged or destroyed. Nearly a dozen hams assisted with communications.

In Erie, Pennsylvania, hams were providing communications for a March of Dimes 9-mile walk April 28th, when severe weather prompted them to activate a Skywarn Net. Buildings were damaged at Erie International Airport--trees and power lines were knocked down, but no injuries were reported.

For the Amateur Radio Nrewsline, I’m David Black, KB4KCH.

--

Thats not the end of it. On April 24th, tornadoes struck Butler, Carter and Madison counties in south-eastern Missouri. More than 100 homes were damaged or destroyed. ARRL Missouri Section Emergency Coordinator Patrick Boyle, K0JPB, said ARES teams and individual amateurs remained on standby to assist if needed during the recovery effort. (ARRL Letter)

**

RESCUE RADIO: HAMS ASSIST IN NEW MEXICO FIRE COMMS

Amateur radio played a significant communications role in fighting the New Mexico wildfires. According to Jay Miller, WA5WHN, both Otero and Lincoln Counties were affected. Albuquerque was linked to Benson Ridge neat Alamogordo via the W5BI remote base with support from stations in Roswell and Ruidoso. This in support of the Red Cross and other agencies. Also, the 146.74 and 145.23 MHz repeaters plus 3.939 MHz Lower Sideband were in use.

The Red Cross had set up a shelter in the city of Cloudcroft. During the blaze several hams were forced to out of the area because they were in the path of the fire. They were located in a recreational vehicle in a near-by campground. (WA5WHN, ARNewsline™)

**

RESCUE RADIO: PHONES FAIL IN UK AND HAMS CALLED OUT

The United States is not the only place where radio amateurs have been busy. Ham radio operators who belong to the emergency service group Raynet were also called up after the telephone system failed in one area of the United Kingdom. Jeramy Boot, G4NJH, in Nottingham has more.

--

A major failure of the telephone system in south-west Hampshire and part of Wiltshire occurred during the evening of the 25th of April. At 2030, Bob, G4VWP, received a call from the Duty Emergency Planning Officer for Hampshire, requesting that Raynet be put on standby, ready for callout should the need arise. Later another call was received asking that, if required, Raynet should set up a VHF communications link between the police Command and Control Center at Netley and police HQ in Winchester.

Thirty-four members from four groups indicated that they were available for callout. The Forward Control Land Rover and 60-foot mobile tower were collected from storage and a portable mast, radio, power supply and associated equipment were made ready to take to the police headquarters.

The callout was led by Clive McCloud, G4EFB, Roger Davies, G8SXC, John Witts, G6BBW, Ian Duffy, G7GMN, and Dave Minett, G6DJA.

Jeramy Boot, G4NJH in Nottingham.
--

Eventually it was found that ham radio assistance would not be needed. Raynet members were dismissed at 23:10 UTC. (GB2RS)

**

ENFORCEMENT: FCC DOWNGRADES SIX TECHS

The FCC has notified six Technician class hams that they have been downgraded to no-code Technician status. This, as a result of an audit of a May 2000 ARRL V-E-C administered exam session in Statesboro Georgia. The FCC’s Riley Hollingsworth says that the problem was not the applicants but rather the test itself:

--
Hollingsworth: “We found that in that session the code exam had also been used in teaching the classes and in the practice exam. The same code exam -- that is. We called in eight for a code retest. Two appeared and passed but six did not show up.”
--

Hollingsworth said that the variances in the exam procedures were not the fault of any of the upgrade applicants and in no way reflect on them. However, they must first pass a valid Morse test before they can be granted the privileges of a Technician class license holder who has passed the code. (FCC, RAIN)

**

RADIO RULES: FCC CONSIDERS NEW SATELLITE INTERNET ACCESS SERVICE

The FCC says that it will consider rules for a new service capable of providing broadband Internet access via satellite. According to the CGC Communicator the FCC Commissioners will consider issuing a Report and Order and Further Notice of Proposed Rulemaking to implement sharing among multiple licensees in a new service capable of providing broadband access to the Internet using

non-geostationary satellites operating in the KU band. (CGC Communicator)

**

RADIO LAW: CALIFORNIA LAWMAKER SEEKS CELL PHONE BAN

A California lawmaker believes that two cellular telephone related car accidents may bring attention to his efforts to ban drivers use of cellular telephones and other hand held communications devices. Assemblyman Joe Simitian says it is time to ban these apparatus in the name of public safety.

New York State already has made it illegal to use a cellular telephone while driving unless it is attached to a hands free device. Other states are considering similar legislation. In California the idea has been defeated every time it has been brought to a vote, but Simitian believes that the recent series of accidents will bring a vote in favor of his proposed across the board ban. (Published news reports)

**

HAMVENTION 2002: APRS TAKES CENTER STAGE

APRS will be a feature at the upcoming Dayton Hamvention. Jack Parker, W8ISH, of Amateur News Weekly has the story.

AWARDS: MC GAN NOMINATIONS DUE MAY 24

The ARRL says that nominations close May 24th for the Philip J. McGan Memorial Silver Antenna Award. The annual award honors an amateur who demonstrates outstanding public relations success at the local, state or national level on behalf of Amateur Radio, and who best exemplifies the volunteer spirit of the award's namesake.

The award is named for the late journalist Philip J. McGan, WA2MBQ, the first chairman of the ARRL's Public Relations Committee and an enthusiastic Amateur Radio booster. To obtain an entry form for the Philip J. McGan Silver Antenna Award, contact Jennifer Hagy, N1TDY by e-mail to jhagy@arrl.org (ARRL)

**

HAM RADIO IN SPACE: KOLIBRI 2000 TO DE-ORBIT FOLO

Last week we reported that the Kolibri-2000 Russian and Australian School Scientific Research Microsatellite was slated to deorbit sometime between May 3rd to the 4th U-T-C time. WE also suggested that you might want to have a tape recorder on the satellites primary or secondary downlink channels.

Well if you did, and if you caught the last transmissions from the Kolibri we could like to get a copy and so would Miles Mann, WF1F, of MAREX. You can contact Miles for shipping instructions by e-mail to wf1f@attbi.com. Amateur Radio Newsline can be reached at the address you hear at the end of this weeks report. (WF1F, ARNewsline™)

**

HAM RADIO IN SPACE: AMSAT-NA SPACE SYMPOSIUM

The 20th Space Symposium and AMSAT North America Annual Meeting is scheduled for November 7th to the 11th in
Fort Worth, Texas. The meeting will chronicle recent and future Amateur Radio satellite technology developments and including an Electronic Surplus Stores tour on November 7th. Also slated is a Field Operations breakfast, a tour of the Lockheed Martin Aerospace Company and the all important actual AMSAT North America Board of Directors Meeting November 10th The 2002 event chairman is Keith Pugh, W5IU. (ANS)

**

INTERNATIONAL-UK: NEARLY 2300 FOUNDATION LICENSES ISSUED

According to the latest statistics from the United Kingdoms Radiocommunications Agency, as of the 18th of April, some 2283 of that nations Foundation Licences had been issued. This figure is made up of 1582 Full and Intermediate Class B’s taking the Morse Assessment and 701 individuals taking the Foundation Course.

Of those 701 completely new entrants to amateur radio, 226 - or 32 per cent - are under the age of 21. After only three-and-a-half months, these figures are being seen as a great success and thanks are due to the many radio clubs and individuals who are giving their time in order to provide Foundation Courses and Morse Assessments. (GB2RS)

**

DX

In D-X, word that Arliss Thompson, W7XU, and a few of his ham radio friends will be operating a 6 meter station from St. Paul Island in grid square FN97 from 29 June to 8 July. Thompson says that the group plant itself on 50.157

MHz and remain there for the duration of the DXpedition. Both CW and SSB operations will take place on that frequency although they may run split if they get a very good opening. The station will have a breakable beacon also on 50.157 MHz that will be running during slow times. QSL to W7XU. (W7XU)

Edisher Giorgadze, P5/4L4FN, has returned to North Korea. During a stop-over in Beijing, Edisher collected an Ameritron AL80A amplifier that was donated by Martti Laine, OH2BH, Bernie McClenny, W3UR and Al Baker, W5IZ. In his first contact using the increased power he contacted K4SSU who told him he was S-5 barefoot at 100 watts but an amazing 10 db over s 9 with the AL80A in line. He days that this basically guarantees more QSO's from the skylines of Pyongyang. Especially since he has extended his contract and will be in North Korea through June of 2003. Also, now that his operation is fully accredited by the ARRL a full-color QSLs has been released by his QSL manager, Bruce Paige, KK5DO. (KK5DO)

**

SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

And finally this week, we hear once again to hear from our support fund administrator. Here's Andy Jarema, N6TCQ.

--

Yes, this is Andy Jarema, N6TCQ, Chief Financial Officer of the not-for-profit organization you know as the Amateur Radio Newsline. And once again, I am using the single word -- HELP! If you value this service, please help.

Let me start by saying that we really appreciate the individuals who give of themselves, but we don't hear from enough clubs. There are literally thousands, perhaps tens of thousands of traditional radio clubs and repeater clubs out there. These are the wonderful folks who re-transmit our broadcasts, bringing your nets increased value, and giving your members the latest in Amateur Radio news and information to enhance their hobby.

But Amateur Radio Newsline cannot continue without the funding needed to pay the monthly bills. And right now, we can't.

In the quarter century that it has existed, no one at the Amateur Radio Newsline has ever taken a salary. We all volunteer our time and talents. But we ARE faced with are monthly expenses for gathering and delivering the news to YOU! We are talking telephone, Internet access and the like. This hasn't changed.

We are also talking about the money we spend each year to help insure the future of Amateur Radio through the Young Ham of the Year award program. Yes, Vertex Standard, C-Q, Dave Bell Associates and Rosewood cover the expenses and gifts for the recipient. They do not cover the administration expenses. That's out part and it ran close to $1200 last year.

The bottom line is this. I am asking that you try to find it within your organization to continue this service. As we have said before, whether Amateur Radio Newsline continues to provide this service or if it disappears is totally

your decision. We are here to serve you for as long as you want us. You response the next several weeks will provide the answer.

The address for the Amateur Radio Newsline, Post Office Box 660937, Arcadia California, 91066.

Looking forward to hearing from you really soon, I’m Andy Jarema, N6TCQ.

--

Also, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award closes May 30th. Less than three weeks from now. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline™. Good! To post this crap on "rec.radio.amateur.policy" amounts to SPAM anyway.

It may be acceptable to the other groups (i.e. "rec.radio.info" and
"rec.radio.amateur.misc") but it is NOT a policy or licensing issue and is
therefore inappropriate to .policy.

>But Dick responded, "Well, there you have it", exactly as I knew he
>would.

So? Is that supposed to be PROOF that W0EX is somehow against
"digital" experimentation by hams?

Let's ask him.

Dick, are you "for" or "against" digital experimentation by hams?

Do you think such experimentation is good or bad for ham radio?

Note that I'm not asking about how much success hams will have, or how many
hams will actually do any experimenting. And I'm not asking for comments about
the preaching done by some about "digital is the future of ham radio" and
"legacy modes" and such buzzphrases.

I'm simply asking "are you fer it or agin it"?

Me, I'm for it. I think it's a good thing.

>That's why I posted the troll - to provoke Dick into showing
>his true colors.

You failed, then. Why not just ask a simple, direct question, like I just did?

>You are defending an indefensible position, Jim,

I say experimentation by hams is a good thing. I'm all for it. That's an indefensible position?

>and losing respect in the process.

Losing whose respect?

>Please forgive me because I didn't
>plan for that to happen. I had no idea your agenda ran so deep.

You don't seem to understand my position on this at all.

[expletive deleted]

>Jim! Dick could have simply said, "I agree", instead
>of, "Well, there you have it".

You have admitted trolling, Cecil. Your word tricks are so common that they no longer work.

Why not just ask a simple, direct question, as I just did?

>Dick is obviously against digital experimentation.

It's not obvious at all. You are a biased observer who is pinning all his "proof" to an ambiguous statement.

>Your support of Dick's position means that you are against digital
>experimentation.

Nope. I am not against it. I have repeatedly said that I am for experimentation by hams, including digital experimentation. I have commented to the FCC in support of rules changes that would make such experimentation by hams easier on HF.

My position on experimentation is well known. See my comments on RM-10413,
posted here and on the FCC website.
>

Right.

>When you defend someone who
>is a known and well-defined problem within the ARS, you become part of that
>same problem.

I agree. I don't defend such people.

>I am really disappointed with your defense of an anti-digital
>position.

You obviously don't understand my position, then. Try reading what I actually
wrote, without the blinders of bias and prejudice you so often burden yourself
with.
>
>> Perhaps there are others who have filed comments, but so far they have
>> not shown up in searches of the ECFS system.

Actually, thanks to K0HB, I am now aware that several concerned amateurs have
filed comments. That's a good thing.
>
>What does it matter?

FCC reads those comments and they help shape policy. That doesn't mean FCC is
absolutely governed by them. But they have an effect.

>The FCC is going to do what they consider best for the ARS.

Not necessarily. They are going to do what they consider best for all
concerned, not just the ARS. And they are limited by consideration besides what
they think is best. For example, the restructuring R&O made it quite clear that
the FCC thinks that the elimination of all code testing for all ham licenses is
best for the ARS. But the FCC cannot eliminate all code testing now because of
S25.5. So they could not do what they thought was best. They had to go for
second-best until S25.5 goes away.

>The individual opinions of individual hams doesn't matter a whit.

That's a big, steaming pile of [expletive deleted], Cecil!

>The FCC is not going to allow the inmates to run the asylum.

I am not an "inmate". Neither are most hams. The ARS is not an "asylum".

Your insults are simply another pile of [expletive deleted].

>The Novice band restructuring will not be an experimental band.

You know this how?

>More probable is allowing broad band digital signals
>in the phone bands.

They are allowed there now - if they are voice or image.

>Try a top-down approach instead of a bottom-up approach
>next time. That's what the FCC does.

Try reading Part 97. Maybe someone will take you seriously. I sure don't.

This will be meaningful to just a few of you (K2ASP, maybe couple of other plain-brown-rrapers).

Had a nice long chat on 14.057 this afternoon with W4BW. At age 92 his fist is still crisp and steady, and he just bought a new IC-756 Pro last week, which he hopes to wear out. Used to cuss him out for his policies, but sure was nice to hear the old guy on the air!

N2EY wrote:
> Dick, are you "for" or "against" digital experimentation by hams?

Nope, that's much too obvious. What we need to ask Dick is if, "Well,
there you have it", means "I agree". It obviously doesn't and you
look mighty foolish for asserting that it does. Whatever Dick asserts
or denies now, most of us know what he meant when he said it.

> My position on experimentation is well known.

I thought it was until you started supporting Dick's negative position.
Birds of a feather ...

You think my opinion matters? Exactly to whom? Do you think my
individual vote ever matters? Do you think the FCC would do
anything different if I died tomorrow? Get real!

> >The FCC is not going to allow the inmates to run the asylum.
>
> I am not an "inmate". Neither are most hams. The ARS is not an "asylum".

It's a metaphor, Jim. Don't you understand metaphors? It means that
any public/governmental organization needs oversight other than the
entrenched members of the service/society.

> >The Novice band restructuring will not be an experimental band.

>

> Try reading Part 97. Maybe someone will take you seriously. I sure don't.

Of course you don't, Jim. That's why you make dozens of postings over
periods of weeks responding to my non-serious postings. When are you
going to do something about that burr under your blanket?

Larry, I think "you" should get with Lance. Why are you always dreaming up
stuff for other people to do, like learning your favorite mode?

> >Even if Lance Bass himself never earns his ham radio license, the
> >experience would be a celebrity endorsement of ham radio.

Why wouldn't he "earn his ham radio license?" Remember, "they" just give
them away.

> I disagree, it would merely be a celebrity talking to kids on the
> ground, using *A* radio. May as well be Verizon Wireless for all they

Larry, write "VOID" across your license and send it back to the FCC. Then
go through the licensing process while Lance becomes an astronaut. I'm sure
the media will give you'se guys concurrent coverage.

> >Talking to Lance Bass
> >would be MUCH more exciting to the students than talking to other

Dan, I hadn't used sideband in about the same period of time. Yet since the FCC began SSB testing, I figured that mode would be history! Not so, its more popular than ever. Even the ARRL wants to expand SSB spectrum with the refarming of the old Novice subbands. Go figger.

> Good to see all that code activity on 20m. I think I'll dig out my good

Just wait till Larry/K3LT's "friend" sends you "FU" in Morse code. And Larry is a bigtime FIST. I wonder what the connection is.

> I think that, ultimately, FISTs will be the one to save real HAM radio.
> No decadent CBer qrmers on the code sub-bands!

Perhaps CW should be exiled to the desert for 40 days. If it is truly our Saviour, then it won't be a problem. How do you feel about going in to the Lion's Den?

> GO FISTs!
>
> 73,
>
> de KR4AJ

Larry says 4-landers are knuckle draggers with accents. Good thing you're using code to disguise that accent.

Best of luck to you. Keep your key finger greased.

Brian

Hans and Larry, I'm not totally against incentive licensing as most of you believe. I'll support additional spectrum for Extras providing they host 4 VE sessions of at least 6 examinees each year. Brian

I disagree. Newsline articles sometimes deal with policy or licensing
issues. Thus it is NOT spam.

Dan, I've never slammed you. However, our Extra friends on here tolerate no question that can be easily answered by a quick review of the question pool, with one caveat: it must be a Tech asking the question. As an Advanced, you'll probably get a pass rather than be told not to let the door hit you... on your way out.

Anyway, you asked, "Also, is it against Part 97 rules to transmit CW in the voice sub-bands?"

It is not.

You'll have to wait for the friendly Extras to give you advice on the spring loaded switch. My advice there is no good.

FWIW, I'm told by Extras that its OK to be a nasty jerk on here because this isn't amateur radio. I disagree, and it is apparent that you disagree also. I'll stand by and see if they'll rip you a new one, or if they'll invoke the PCTA double standard and give you a pass because of your amateur rank.

What will be the new exam questions that will bring us to an understanding of how this new band works? For regulatory purposes, I propose that this new band be reserved for Extra class operators until the new license pools are released in 2004, because only Extras have the unique ability to understand and utilize frequencies that are a mere few kilohertz away from the General class frequencies.

writes:

>Can a person improve sending speed when using paddle type keys instead
>of a straight key?

Dan:

Short answer: Yes, most definitely. Going from a straight key to a paddle
took me from 5 to 20 WPM almost overnight, sending-wise. Also, hearing
perfectly-formed characters improved my copying ability dramatically,
especially since I drilled with the paddle/keyer combo quite a lot off-the-air,
in addition to making live QSO's.

>Or is there a type of straight ket more suited to
>higher speeds? My old straight key, which I have mounted on a block of

A J-38 key (with the coil spring) would probably have faster action than
the J-37, which has a leaf spring. You don't specify which type you are
using. My straight key is a WWII-vintage Lionel J-38 in original
condition.

>Also, is it against Part 97 rules to transmit CW in the voice sub-bands?

Nope. Fire away, Gridleak!

>Will there be a CW sub-band in the new 60 meter band? Thanks,
>de KR4AJ

I think the 150 KHz allocation on 60-meters should be divvied up
half CW and half digital -- no 'fone whatsoever! It's time for the NCTA
to put up or shut up on their promise of a digital revolution in ham
radio. No "legacy" voice modes in any new HF bands! If they wanna
yak into a microphone, let 'em squeeze in between the QR-Mary on
the existing HF phone segments.

Dan, as far as I know, CW is legal anywhere in the amateur band - but, you would be smart not to use it in the phone bands. A straight key is somewhat limiting - I couldn't send good cw past about 24 wpm on a straight key, and my maximum (and it wasn't very good) was about 27. I also had trouble with a bug as I never could send really good code with one. Personally, I like my fist to sound like it was being sent by a machine. Using an HA1-TO keyer (Hallicrafters, I think) allowed me to send as fast as I wished (perhaps 50 wpm back when) and it did sound as if a machine was sending it. The new machines have built-in keyers which will allow you to send whatever you can send/receive.

Of course I'm for any sort of experimentation by hams, and Cecil the Dip knows it. What I decry is his and Carl's rabid insistence that all hams should grab off a DSP eval board, build up their own, or whatever and leap to the fore of digital experimentation ahead of all the commercial enterprises, which is the essence of what they have been claiming. Most hams just are not and will no become proficient in digital design and he knows if, that is if he knows anything outside his own narrow sphere. Cecil is 99.9% troll and everyone here knows it. I don't have much

to say to him anymore because of it.

One of the widely advertised justifications for opening up a 60m band
was to have more phone space for emergency ops vs. the terminal
congestion in the 75 & 40M phone bands. No doubt done with a bit of
tongue-in-cheek standard motherhood leveraging of the "emergency ops"
thing. Can't lose with that old ploy. But it does make some marginal
sense from the standpoint of the propagation characteristics 60m
offers. My bet is that's it's gonna be wall-to-wall ssb with other
modes allowable. If they can tolerate operating amidst the
motormouths.

Absolutely. Paddle-type keying devices go all the way back to the days
when Morse ruled the landlines in 1800s. That's where sideswipers and
bugs came from long before radio was invented. The invention and
implementation of those widgets was brought about by the fact that
they provided much higher throughputs with much less work. Throughputs
and sloth were the name of the game 150 years ago just like they are
today. There are hams out there effortlessly pumping 40-50wpm hour
after hour with iambic paddles 'n electric keyers which ya could never
do with a J-38.

The "damping" is in yer fingers, not in yer key. On average 18wpm +/-
is where straight keys max out. More like where the operator maxes
out. Bag the J-38, you're 150 years behind the power curve with the
thing.

You can legally run cw anywhere in the HF ham bands. But it makes no
sense to do so in the phone bands, you won't find any cw contacts plus
you'll aggravate the hordes for no good reason.

Many hams use keyboards to send CW.

Then why did you respond, "Well, there you have it", when I said I would like to see hams experimenting as much with digital stuff today as they were experimenting with SSB in the late 50's? Is, "Well, there you have it", a positive or negative response? Jim says it was a positive response but you have never been known to respond positively to any of my postings including this one.

A free pass? You can ask all the dumb questions you want and the Cronies
won't bat an eye.

I'm referring to the PCTA double standard.

Had Dan been a Tech, Larry would have called him everything from a "knuckle
dragging 4-lander with a Southern accent," to "welfare mother of color with
her hand out." Then Larry would invite him to not let the door hit his ass
as he exits amateur radio. As the rest of us cry foul, Dick would jump in
and support Larry.

Larry, you make no sense (not suprised). If CW is digital and digital is digital, then dividing the band into half digital and the other half digital, you could start the department of redundancey department - unless CW really isn't digital.

And since we will be secondary users, and the primary users also use phone...

But you aren't really interested in best use, best practices, or being a good neighbor. You're only interested in running your mouth. Congratulations, you've succeeded.

And I noticed that you gave the 12+ year Advanced a pass on the CW in phone subbands question. True to form, your PCTA double standard kicked in. We expect nothing less from you.

Who does?

> Personally, I like my fist to sound like it was being sent by a machine.

That is a great goal. You may find some here who vehemently disagree with
that notion. One even prides himself on sending so atrociously that no Tech
could ever possibly copy him using a computer.

I especially liked the part where Dan thinks I've slammed him. Good acting. Then Larry performing true to form, sees he's an 2x2 Advanced licensee with at least 12 years time in grade, goes ahead and answers the most basic question without batting an eye. Larry actually looks like a good guy for once. I think they must have worked it all out before hand.

It's worse than that, they're a bunch of hypocrites. There are
qualified digital design wizards crawling all over this NG babbling at
length about how digital modes are "absolutely necessary to save ham
radio" and the usual variations thereupon. Then they turn it into
beasting on those of us who either don't have the knowledge and/or the
inclination to do the development work and/or who are perfectly
content with the current modes and see no particular benefit to the
non-existing modes they "visualize". Yeah, we all really need an
Internet portal on 3.700, right.

True, but who needs a computer to send/receive Morse - unless, of course, the speed is far too high to copy by other means? I remember having many nice RTTY QSOs with VK2NP, Norm, when I was staioned on Guam. It was on the second such QSO, I believe, that I had a brain cramp and briefly stopped typing. Then I started with slow shifting between numbers and letters, sped the shifting up to the max the 60 wpm machine would take and started typing again. When I turned it back to him he stated he couldn't believe it, but he figured out that I wasn't using the tape reader on the machine to send what I prepunched. I didn't need the tape reader, therefore I didn't use it. Besides, what will the computer react to if I use dit dit dah dah for om?

So if I post something that has already appeared in the ARRL newsletter,
another web site, the FCC site, etc., that making such a post is
inappropriate?

Keep the ARNewsline posts coming. They do a nice job of pulling
info together from a variety of places. If the posts bother one or two
denizens
of RRAP, they can "killfile" them for the future.

Cheers,
Bill K2UNK

More than you might suspect. Virtually all of the heavy-duty
contesters keyboard cw because the logging software needs keyboard
inputs which keys & keyers don't provide. But most of 'em put the
keyboards away when the 'tests are over and go back to the paddles for
more casual ops.

1) They don't on a REGULAR basis - yet every edition gets posted here.
2) The purpose of the post is an EXACT match to the purpose of the
"rec.radio.info" newsgroup. As there exists a more appropriate newsgroup, it's
inappropriate here.

To me, what makes it inappropriate is that the CONTENT often has very little to
do with POLICY. Occasionally, one story may have a policy aspect - and so they
may post that (without [my] objection), but not the ENTIRE report.

Off topic posts happen here frequently. So do the subsequent flames.

>Keep the ARNewsline posts coming. They do a nice job of pulling

As I have said, there's a newsgroup that exists PURELY for their type of post, which they are NOT using.

3421. Wonder what the new band will cost?

I think 160 will go away soon. This is one band needed commercially for
things like lo-jack. Many hams cannot use 160 anyways so taking it away
will not result in that much protest. We can only use it part of the
year for those who can use it at all. If one does not have acres of land
and he attempts to use it with any of a number of inefficient 'top hat'
or 'marconi' antennas, all he gets is a bunch of crabby old men saying
they cannot hear him without using their earphones. Technically, 5MHz is
better, even if the allocation is quite small. I personally have no
great concern about 160 but would hate to see it go away if only because
it is a part of ham culture. Still, 160 is only a secondary allocation
and used only by a select few hams who happen to live on large acreages
and farms.

TKS for the information Larry. I knew someone in this ng would spend a few moments to give me the simple refresher in Part 97. And yeah, I remember rrap back in 1995 where a lot of people were telling us to get rid of morse and to use the more 'modern' digital modes. This is the big unfulfilled promise of the reduction to 5 wpm. Today on HF I hear a lot more CW than any of the modern digital modes. That is as it should be because, of course, modern digital modes have much more promise on the higher frequency modes where they may have some decent bandwidth to accommodate their speed.

In the few instances I've bothered to read the thing there was nothing
in it which was not in the Newsletter. Multiple sources of news only
matters when they are sources of editorial content and opinion. Both
the Newsline and the Newsletter editors bend over backward to avoid
publishing "editorialized content" or opinions.

Hmm, looking at the bands I had when I first got my ticket in 1965, and
comparing it to what we have today.....

Seems in 37 years the FCC has taken nothing but added alot of bands to the
amateur service.

Am I missing something???

Steve

Probably a nice chunk out of 440 or 900 Mhz.
The downturn in the Technology Industry has
caused a lighten-up of industry pressure
to re-assign most of the ham freq's in the
UHF and SHF bands. These are still the most at
risk from Commercial interests, but can you really
blame them? After all...ham radio is a dying
(literally) hobby seein that the average ham
is 60 yrs old. My guess is by 2020 there will be
HF and 2 meters, and that's all.

I couldn't agree more Ed.

The ARRL after all, has as good a track
record of publishing accurate and timely
information as does the IRS...

As long as you send in your membership
dues on time, they'll be friendly, and once
they get your check, you realize that
you've been screwed, just like with
Govt. taxes (adleast with the arrl we can
choose to opt-out, as I did in 1980 and
don't regret it one bit)

There was the loss of 220-222 MHz about 12 years ago.
Though we did get 219-220 but that band is for packet
and use by coordination only, or something like that.
But you just can't go transmit there like you can everywhere
else in the amateur spectrum.

Jeesshhh..... We know the world of newsgroups revolves around YOU!

Some of us actually like getting this bulletin, as there are no outlets currently to listen to it on the air, at least until the West Michigan Superlink goes back up on the air.

If you have such a crappy internet connection that the message takes SOOOO much time to d/l, then you need to look at getting a better connect.

God I hate netcops!

Brian, there are definite clues that this was a troll:

1. He thanks Larry.
2. He comes to rrap for a Part 97 refresher when the entire document takes
5 minutes to read.
3. He remembers rrap in 1995, and knew this would be the place to get
answers.
4. He remembers being told to get rid of code, and the unfulfilled promise
of digital.
5. Put digital on the higher bands where it belongs.

"Someday" could be 100 years from now.

Until a few weeks ago, the options being presented to the FCC for the Novice
bands were "leave 'em alone" vs. "reuse 'em for 'phone". Then Hans, K0HB,
proposed a third idea. Hans' opinion has gathered lots of backing from
others. Maybe the FCC will act on it, maybe not, but that single opinion
has had an effect.

Well, there you have it.

Dick, W0EX, has said unequivocally that he is FOR any sort of
experimentation by hams. A simple, direct answer to a simple direct
question.

>What I decry is his and Carl's rabid insistence that all hams should grab off
>a DSP
>eval board, build up their own, or whatever and leap to the fore of digital
>experimentation ahead of all the commercial enterprises, which is the essence

I think it would be a good thing if all hams did just that. Or even most hams. But
again, that's a "mom and apple pie" kind of thing.

> Most hams just are not and will no become proficient
>in digital design and he knows if, that is if he knows anything outside his
>own narrow sphere.

Exactly. It'd be a good thing if all hams did the eval board thing, but it's not
gonna happen for a whole pile of reasons. Just like most hams aren't going
to homebrew FT-1000 equivalents or design/build their own towers.

For most hams, the ROI just isn't there.

Do you agree or disagree with the above, Dick?

> Cecil is 99.9% troll and everyone here knows it.

Sure. So don't get all heated up by his trolls. I sure don't.

Yes indeed.
I cannot do otherwise but agree, but I must note that if that were ever the case it would show that ham radio had been taken over by nothing but digital engineeers. The bulk of ham radio operators simply never will proceed technically to that point, and never have, the single "basis and purpose" noting advancement of the art as a reason for our existence notwithstanding. That fact becomes more true as technology advances and becomes more complex. The character of the hobby would be changed drastically. How many medical doctors who are hams have the time to teach themselves digital design theory on anything but the MOST basic conceptual level? Darn few, and the same apples to the majority of hams, who want to be ham radio operators, not design engineers. Now Cecil will insist that is isn't design engineers who come up with virtually all the modern communications advances. (It seems rudimentary that anyone with the sort skill needed to do that work would just naturally find employment where he could take advantage of those skill. So that makes Cecil and Carl's rabid rants no more than showboating.)

That factor is even more true today than in past times when the advanced licenses' qualifications were more difficult to meet. With the "Extra in a day" schools now out, that one should expect much at all in the way of experimentation by the bulk of hams, many of whom don't show enough interest to even build their own dipole antennas is almost laughable, and Cecil and Carl's attitude is almost laughable.

In spite of my reservations about a couple things that Hans' proposal will probably eventually cause, I must agree with the idea that it would provide a whole lot more stimulus for ham radio experimentation than Cecil and Carl do.

>
> > Cecil is 99.9% troll and everyone here knows it.
>

> Sure. So don't get all heated up by his trolls. I sure don't.

Trolling and personal attacks are not quite the same, but as I said, I just don't pay him much attention at all anymore.

But the question does NOT address the argument. The real argument is:
Was, "Well, there you have it", a positive or negative response to my
suggestion that digital experimentation is a good thing? That is the
entire crux of the argument. Do you want to settle the argument or
mealy mouth your way out of it?

> >What we need to ask Dick is if, "Well,
> >there you have it", means "I agree".
>
> Why? What is wrong with the simple, direct, honest question I posed?

Because it doesn't address the argument over whether, "Well, there you
have it", is a positive or negative response which was and is the only
argument. Dick's response was either positive or negative. You argue
that it was positive. I argue that it was negative. Whether Dick's
response was positive or negative is the *only* argument. All my
additional assumptions are based on the answer to that basic question.

> You presume to
> know what W0EX meant, but you don't really know.

Based on Dick's history of responses to my postings, I am 99 44/100
percent sure that Dick responded negatively to my recommendation that
hams do digital experimentation. You notice Dick has not denied that,
"Well, there you have it", was a negative response nor has he asserted
that it was a positive response.

> >It's a metaphor, Jim.

Hans, Kï¿½HB, posted:

> I see a lot of hams, having a great time at the hobby,
> enjoying themselves, maybe getting smarter by virtue
> of their curiosity in areas like technology, propagation,
> or simply engineering a better station to win in a
> radiosport contest, but not necessarily "giving
> something back".

I think that each and every amateur-radio activity,
from serving as president of the ARRL down to "kerchunking"
the local repeater, expands the avocation and, in some
sense, "gives something back". I am a strong believer
in the principle of the unintentional contribution.
Just by engaging in the act of communicating via amateur
radio, one both provides another connection node in
the vast, ad-hoc, worldwide network that is the ARS
but also, through the content of the communications,
influences the minds of others. Both aspects of this
activity have unintended, beneficial consequences.

One long-standing idea about amateur radio operators
"giving something back" has to do with mentoring or
"Elmering" young people in the radio communication
art. While formal instruction in the subject is
valuable, the principle of the unintentional
contribution also has major consequences. My
life experience as a young man was that of being
encouraged by older hams and broadcast engineers
to not only enter the technical field but to also
enter adulthood in a certain, responsibly-minded way.
They did this not by lecturing me but rather
by simply providing the other end of long-winded
and wide-ranging conversations, both on-the-air and
in person. They also, through their lifestyle
and interactions with each other, gave me role
models around which my emerging persona could
coalesce. It was all done by them just being
on the air and being themselves, with no intention
other than leading their lives.

> Are they good hams?

I thought so then, and I think so now.

But you and I know that was not the crux of the argument. The argument was over whether, "Well, there you have it", was a positive or negative response to my suggestion that hams do digital experimentation. You are engaging in petitio principii.

What Dick has so far refused to state is whether, "Well, there you have it", was a positive or negative response to my posting. That is the *crux* of the argument. Anything else is merely mealy mouthing.

So Dick, was, "Well, there you have it", a positive or negative response to my posting. We "will have it" when Dick answers that simple question.

But you two are mealy mouthing around the real issue which is: Was your response, "Well, there you have it", to my suggestion that hams do digital experimentation, a positive or negative response? Jims says it was positive. I say it was negative. So far, you have refused to answer this one simple question. So Dick, was your response positive or negative? _____ Can't wait for your answer.

And Henry Goldberg, the wireless industries' legal mouthpiece, is
slowing down in his later years (aren't we all...)

Whenever you see a Pizza contest between the ARRL and the
wireless interests, you can be sure that Henry is involved on
"their" side.

But why keep the even MORE out-of-date cw mode if even voice
is now "legacy?" Let's make the new bands computer modes ONLY (no
voice OR cw)--that way you can find out very quickly (1) if as many
people use the modes as NCTA states will use it and (2) if the modes
are really more efficient than the old fashioned ones as well.

How about it, Larry, willing to give up YOUR legacy mode if
others give up theirs?

Presumably to establish his level of involvement in Amateur Radio and thus imply his level of expertise in the matter, one amateur closed his comments to the FCC regarding RM-10413 with the following:

"III. Vitae: I passed my Novice exam in November 1986, and have not used the Novice CW only subbands since 1987."

Seriously, guys, I didn't make this up!

I hope you are wrong. Top band is a very unique spot in the radio spectrum. Not quite HF and not quite LF. It supports many unique types of propagation that one does not see on the higher bands.

As far as a antenna in a small area...have you ever tried an 'Inverted L' ?? Only about 180 foot long. Run it up in a tree as vertical as possible (50' minimum in my opinion), run the rest horizontal. Don't take up much space.

I just run a single ground rod and a single ground wire just under ground and it works like a champ on Top Band. Feed with coax and a coaxial choke. Tune to resonance and go for it.

What about 6 meters? Not much commercial demand for that is there?

As for 2 meters, don't bet on keeping it. The FCC has a plan (IMHO). They wanted to clear out VHF, so they made the HF easier to get....listen to VHF repeaters lately? See my point.

> Ed Hare, W1RFI

The ARRL decision to go along with the publishing of
the FCC written exam question pools back in the 80's.
This is perhaps the greatest damage wrought upon Amateur
Radio, mabey even more than the Incentive Licence disaster
of the mid-60's. As a result of the ARRL's insane desire to
put Dick Bash and his "Bash Study Guides" out of business
the ARRL lobbied the FCC hard to publish the test questions.
(..and I have the word of 2 former ARRL Directors who told
me point blank, at Dayton, that the TRUE reason the ARRL
did this was for this reason - Dick Bash had "crossed the line"
and had to be "dealt with" by the old-boys-network based
in New England) As a result to this, today we have Extra Class
"Licensees" who couldn't identify 10 passive electronic
components if they were placed on a table in front of them
let alone explain Kirchoff's Voltage Loop Theorum or draw
up a simple Common-Emitter Transistor Circuit and calculate
the value of the biasing resistors for a desired operating
curve... Ham radio is now a "plug-and-play" hobby where
even the most basic operational parameters going on within
their Yaesu HF rig when it's powered up on the table is a
total mystery to the great percentage of new hams who got
their "ticket" in the last 15 Years. And they still have the
straight face to say that we are a service rooted in "technical"
pursuits - HA! What a joke.

The question was simple and unambiguous. The answer was ambiguous, to you
at least. So it is the answer that requires clarification, not the
question.

Brian, listen: What is wrong with thanking a good ham who takes the time to give some advice to a fellow ham? Does not ham radio also speak to international goodwill and fellowship? Or is it the purpose of ham radio to get on the usenet and flame fellow hams? We are all in this together. We all have a common interest that is built into us and nothing can change our love for radio and yes, Morse code if that is the case. Yes, we love radio. People who do not love radio do not understand us but we understand each other. We are friendly, we are mean, we are lowfers, we are VHFer, HFers and we are CBers. We all love radio. That is, until we start getting hooked on usenet. The usenet drug changes our personalities...it turns good men bad and even causes us to attack, for no reason at all, as you did me, our brothers in ham radio. What is wrong with seeking an interpretation of the complicated clauses in Part 97? I am not a lawyer and neither are you. We only have Phil Kane for that purpose and I will bet that Phil cannot guarantee that all voice bands are open to CW under all conditions. And of course I remember rrap in 1995 and when it was separated from rra-misc due to the overload of messages on the subject of code. I remember Todd Little and all the others who said there would be a digital revolution on HF if we would just open up HF to no coders. And I observed that this never happened. That is fact. Can I not state fact, Brian? And yes, technically, higher speed digital modes are obviously most effective on VHF and UHF where at least there is some bandwidth. Using digital on HF is akin to trying to make a full length movie recording on a vinyl 33rpm record and using that to play the movie. Fact is fact. Thanks Brian, for your comments, because even negative and unfriendly retorts, like QRM, make me a better ham in the long run. And, thanks Larry Roll, for adding a mature sense of stability to the newsgroup.

Best of 73,

de KR4AJ

Umm, yes, I have listened to the repeaters lately. In our area, they
are pretty busy, and well utilized. Chatting, autopatch and lots of
public service events. So I don't get your point at all Dan!

You bring up a good point here, Dan. I am firmly convinced that too many people - and not just Hams - use usenet as a sort of ultimate interactive typing adventure game. These good folk set down to their computer, and turn into vicious bastards, to be blunt.

They forget that there is a person on the other end of the line.

They forget the manners their mama taught them.

No. Back when I first got on the bands the "new" fifteen meter band
was the big buzz and it's been uphill ever since. Except for the time
the FCC "reallocated" our eleven meter band. There wuz a huge leap in
forward-looking spectrum mangement . .

Congratulations, you're Extra deceitful. You come on here and in your 1st
post refer to "Coders."

Why didn't I key in on that?

Brian Kelly has you pegged.

> We all have a common interest that is built into us and nothing can

Right - you set me up, I took the bait, and Larry of all people comes out
smelling like a turd with lavender splashed on it. He's the guy who says
the "Buss Driver is his Favorite Black on the Bus because he's the only one
with a job." He's the one who says "Techs are like Welfare Mothers of Color
with their hands out." Or that "Techs are Knuckle dragging 4-landers with
Southern Accents." You two must have cooked this up.

The usenet drug changes our
> personalities...it turns good men bad and even causes us to attack, for

Yes, yes, yes. Nearly every Advanced licensee I know can't remember if CW
is permissable on HF. Honest question. Good grief.

I am not a lawyer and neither are you. We only have Phil Kane for
> that purpose and I will bet that Phil cannot guarantee that all voice
> bands are open to CW under all conditions.

Very good innocent act. You deserve the Flying Fickle Finger of Fate award.

I'd hate to loose it. It's been 33 years since I've been on HF and 160 would be tough from my city lot, but I had a lot of fun on it back in the mid 60s. My antenna wasn't high, but several hundred feet of 8 gauge wire sure pushed out a darn good signal. While my high school buddy gloated about being able to work South Carolina on 75 in the evening with his 600 watts, my 25 watts of AM was good for most the lower 48 on 160 (at least anything I heard, I worked). Heck, 65 watts in the daytime allowed me to work Buffalo any time during the day (power limits were lower here at night) - and one time the Buffalo stations had to copy a breaker (whom I couldn't even hear). He was so weak he had to switch to cw. He just wanted to let me know I was banging into Washington, DC - this at 1:00 PM (AFTERNOON!). I loved that band.

Phil, correct me if you think I'm wrong. Although there are 3rd world countries wanting more HF spectrum, my belief is that the pressure in on UHF and above. It is our MICROWAVE frequencies that are likely to get clipped. Everyone wants a cell phone. And a pager. And a wireless digital whatchamacallit ... and then there are the photo giants with bluetooth and newer wireless technologies. Wireless is nice, but needs RF spectrum ...

Hans, my own personal thought on this subject is that by learning and understanding, one is creating the capability of giving back should the occasion arise. What good is an amateur repeater, other than having fun? Well, that nasty ice storm in the Northeast a few years back found the local police department (was it Watertown? I'm not sure, but if pressed can find out) patched into an amateur tower. Their tower was taken down. Speaking of towers being taken out, kinda helps if some dumb RMSN happens to know you don't run all knobs to the right - and can copy 'sparkplug1' just fine. The amateurs came through - and you were there. No, not everyone gets the opportunity to put the skills to the test; the point is that we do have a number of folks who ARE capable of helping out in a situation should one develop. To me, that is sufficient. That said, if you care to donate to a very worth cause, I would suggest the M for M fund. You always know where the money goes.

The license is NOT a graduation certificate. Some people
will pass the test and promptly forget anything technical.
As for Kirchoff's law and circuit design, seems there was
no great concern about not knowing those aspects when

all you needed was a General to have full operating privileges.

> Ham radio is now a "plug-and-play" hobby where
> even the most basic operational parameters going on within
> their Yaesu HF rig when it's powered up on the table is a
> total mystery to the great percentage of new hams who got
> their "ticket" in the last 15 Years.

The circuitry in my VCR, DVD, TV, cable box and a host
of other stuff does the same thing. The same is true for almost
anything electronic today. Unless you ARE a designer, most
people have no need to get into the component level design.
That is totally true in industry also.

> And they still have the
> straight face to say that we are a service rooted in "technical"
> pursuits - HA! What a joke.

The service can be as technical as YOU want it to be. It
appears, however, that YOU being technical isn't enough...instead
YOU want everyone else to meet some criteria you want
to set. The reality, howeevr, is that YOU don't get to
make that final decision.

Just how long ago did you drop your ARRL membership anyway?

Cheers,
Bill K2UNK

Brian:

As usual, that would depend on your point of view. Were the NCTA's who accused me of "ethnic cleansing," being a "NIMBY," and not being "inclusive" on Fidonet a decade ago, and later here on rrap, for supporting a "Morse hazing ritual," adding a "mature sense of stability" to the group? You forget that "what goes around, comes around;" and here on Usenet, things will most certainly "go around" and "come around." All I've done is give my opposition a tast of their own medicine, and they seem to have found it quite distasteful, indeed -- as have I when given my dosages.

In the past few months, I have been making a conscious effort to curb the flaming rhetoric and produce much more helpful and thought-provoking responses. Unfortunately, it doesn't seem as if I'll ever get any credit for that, especially not from the likes of you, but then again, I've learned not to look for that to come from you.

I have always recognized that it is the character and nature of Usenet for people to shoot their fingers off, and I'm certainly not an innocent party along those lines. At least I'll admit that, and make an attempt to keep that temptation under some sort of control. However, your constant ragging on me doesn't place you in any kind of position of moral superiority. I think the difference between us is that I have a conscience about some of the things I've said here, and I realize that the only way to compensate for it is to try to do better in the future. What I'd like to know is, is there any hope of you doing likewise? Or are you simply determined to pick up on the compulsive K3LT-bashing where Kim Walker left off?

Brian:

I believe I stated that I'd willingly give away vast amounts of currently allocated amateur spectrum *above 500 MHz* if it could be utilized more effectively and profitably by commercial communications interests. And don't look now, but whether we want to keep it or not, they're probably going take it away from us anyway! What are us hams doing at >500 MHz that justifies keeping over 25 GHz of spectrum in that region? What is the highest frequency you've ever used as a licensed amateur? (1.2 GHz here -- but it was on CW!)

>My Novice experience was less than efficient.

Why was that, Brian? As a Novice, I found Morse/CW to be an exceptionally efficient and personally rewarding communications experience. Sure, there was the learning curve to overcome, but that was a simple matter of applying some good 'ole fashioned work ethic and overcoming my earlier objections to having to learn what I thought (incorrectly) was an outdated and ineffective communications skill. Having proved myself wrong, I ultimately became a True Believer in the Morse/CW mode. It sounds to me like you've never advanced past your own preconceived notions and personal objections, and have therefore found Morse/CW not to be of your liking -- a common NCTA characteristic. However, just because I didn't care for the code testing requirements in place at the time I was initially attracted to ham radio didn't mean that they should have been reduced and/or eliminated -- and I'm glad that they weren't prior to my getting my Novice ticket (KA3HXE). Too bad you didn't have the same advantage of superior licensing requirements that I was able to benefit from!

Rick:

That idea is perfectly OK with me! Shall we co-author a Proposal for
Rulemaking?

> How about it, Larry, willing to give up YOUR legacy mode if
>others give up theirs?

In this case, I'd be all for it! Unlike the NCTA who "talk the talk" of
digital modes, I'm one PCTA who is ready and willing to "walk the
(digital) walk." I'll gladly forego CW on 60-meters in favor of making
it a purely digital band, as long as we're talking about digital *data*
modes only, not digitized voice. Let the "digital voice" mavens use the
current HF phone bands for their experiments along those lines.
An exception I'd be willing to consider would be digital voice modes
to be used exclusively for emergency preparedness, with NTS
traffic-handling used as the means of exercising this capability.
No bowel-and-bladder reports from the Al Zheimer's (my own
Cockney rhyming-slang for "Old Timers").

BTW, my all-time favorite mode, good 'ole Baudot RTTY, is indeed
a digital mode, but it is also a "legacy" mode. Should it still be
authorized? I vote "Yea!"

Brian:

If you'd be so kind as to Google-up a quote where I make the claim that CW is "digital," I'll gladly agree with you. However, before you do that, you might want to look up the correct spelling of the word "redundancy." (Note: I just spelled it correctly, but I don't expect you to take MY word for it!)

>And since we will be secondary users, and the primary users also use
>phone...

I'm sure you have nothing to worry about, and that phone will be authorized on 60-meters. Gives you something to look forward to, I'm sure!

Brian:

My response to Dan's question has nothing to do with the fact that he is an Advanced-class licensee with ~12 years TIG. He's been a participant in this newsgroup for years, but I don't recall seeing him whine about the code testing requirements, or make absurd claims that those who support code testing requirements are some sort of politically-incorrect international criminals. I treat people fairly, in accordance with how they treat myself and others. You can disagree with me the whole day long, as long as you show the same respect for my opinion as you demand that I have for yours. The NCTA, like most liberals, don't seem to be interested in a fair and two-way exchange of ideas. It's their way or the highway. I'm just giving as I have received.

That is why I encourage many people to utilize the 6m and up bands! Use them before we lose them!

If HF is the supposed Golden Egg, I guess I don't want an omelet at this point. Most HF operation I have heard is not what I want to be a part of. (Trash talking CB mentality from people who have been licensed for years, allegedly)

I prefer to start to get to know people on a local level and move outward kind of like the rings formed when a rock lands in water. (Kinda like something I have heard elsewhere; "I am a ham radio operator, I have friends worldwide, but none in my backyard.)

6m and up typically is what is gonna be used for the overwhelming majority of disasters that I will ever encounter. If I need to get a message to somebody in California about our little disaster here in Mid-Michigan, there is resources already for that.

95% of my activity is public service/weather nets/emergency services work as far as on the air, and the practices to make myself efficient in doing so. (message handling etc.) The other five percent is the ragchewing.

Maybe 5wpm is equivalent to "no code". But the Novice license was
always 5wpm. That would mean that the old "all code" license was
really "no-code"? And remember that there are two subands on 6 and
2 for CW only. There no-code techs can operate code if they want to.

Well, if you can do 56K thru a phone line,....
But you don't usually get QRM, QRN, and QSB on phone lines.
How about we move voice modes from 40 where all those SW
broadcasters QRM us to the new 5MHz band and put wide
bandwidth digital modes on 40? And allow us say 10KW? :-)
Or move voice on 40 to match the non usa users and digital
high power bandwidth on the SW broadcasters? :-)

Think you missed the bus. :-) CW does have one feature in its favor,
it's the only human readable "digital" mode we have. Requires minimal
equipment to operate. But it does take extra bandwidth to make it
human readable (a few hundred hertz, about the bandwidth needed for
say 150 baud). If you made CW's bandwidth "match" its baud rate
(to crudely state it), the dits and dahs would be too "soft" for humans
to be able to "read".

Reallocating 2m would be like reallocating 11m; there's too much
equipment out there for them to ever hope to make it commercially
viable. Nobody's going to smash up a $300+ mobile just because we
lost the band, and they'll find their way into the hands of the
freebanders eventually, even assuming that most of the Techs out there
don't get pissed off at losing the band, tear up their tickets, and
keep using it anyway.

In looking at the two differing opinions about the viability of 2 meters in each area, there may be some correlation between the enthusiasm of the old timers involved and the amount of local activity.

Are you *part* of the FCC secret conspiracy you allege that wants to convince hams to operate on HF so they can give away 2 meters?

A simple, direct answer to a simple, direct question. Thanks Ryan.

What mode(s) were the abusive, profane and just plain inconsiderate operators
using?

> Really makes me want to "cash in" my CSCE's and jump
>right on HF eh?

Exactly.

One thing to remember, though. With a decent HF receiver, you can hear any
abusive, profane or inconsiderate operators within a radius of several hundred
to several thousand miles - that's an area of hundreds of thousands to millions
of square miles. On VHF/UHF, the distance covered is usually only a radius of a
few dozen to a hundred or so miles, covering a few hundred to a few thousand
square miles. And if somebody acts up on a repeater, the control op can shut it
down.

Here's a fellow who isn't on the HF ham bands:

http://www.arrl.org for good pubs and poop
http://www.qrz.com one of several good sources of sample exams
http://ah0a.org for Morse Academy which is not needed for the Tech but is
the next step in the process for all other classes.

You will be amazed at how blessed easy Amateur licensing is. The Tech, at
the risk of making a lot of people mad, is not now and never was designed
to be the entry level, it was designed to allow a spouse to order bread
and milk, take the kid hunting, and for all twelve real experimenters most
of whom find Bluetooth is easier under Part 15. The code might take you
three weeks if you work at it about an hour a day via Morse Academy or the
ARRL CDs.

Rattle my E-mail if you wish but you might be better advised being in
PacTel territory to look up one of the local clubs on the ARRL site.

Welcome to the Magical Mystery Tour.

If Shorty handed a kid a pair of wires hot with 110VAC on them, he wasn't very bright. If you think that wouldn't kill you quick you're no brighter.

Maybe he was trying to rid himself of a pest.

I've gotten on 120vac tens of times in my life and never died yet. If one
is careful to avoid 120vac in the bathtub or when standing barefooted on
wet concrete, one can usually quickly turn loose of it. I certainly did.

Think of all the people who have been bitten by AC/DC radios in the past.
(before polarized plugs). That was 120vac directly on the chassis if the AC
plug was turned wrong. Virtually the only ones who died were the ones
in bad health and/or with a separate very low impedance path to ground.

> Maybe he was trying to rid himself of a pest.

It worked.

Most all of us have been guilty of newsgroup nastiness. And yes, Larry has too. But he has been (self admittedly) working on behaving. I don't always agree with all he says, but I still enjoy reading his posts.

Hmm, there are wacko broadcasters on the hf bands, both in our country, and around the world. some are sworn enemies of the U.S. If we apply your logic, will you throw away your shortwave?

You will find problems anywhere you go. No use letting the bad guys dictate your actions. There are plenty of fine gentlemen and ladies on HF also. They're the ones you want to comm with. If you are a gentleman, your addition will help.

Not I. I would prefere we return to pre 1968 and drop incentive licensing
and begin anew from that point. But that won't happen either.

I think the FCC, being a government agency of political appointees will do
whatever is necessary to passify whatever pet project in government is going
on at the time. Whatever it takes to get the 'job done' regardless of the
flack. As long as the 'flack' doesn't hit them that is.

This didn't happen with the loss of 220-222MHz. But there was
always a cloud of sorts over that band before that happened.
And the FCC did compensate a *little* by making us primary
in 222-225 and allowing us to use 219-220 for coordinated digital
backbones and such.

The June Q-Street in the world above 50 MHz has a description of JT44 which is designed for EME which epitomizes a decent approach to digital communication. It is among other things self-adjusting between -2 and +4 seconds in clock diff (mildly useful on an EME path) and a 600 Hz frequency difference which is also damned useful for a method that copies below audibility.

Gee whiz, somebody thought it thru and used the available intelligence for something intelligent. Will miracles never cease.

That is correct. The FCC and everyone else recognizes that 5wpm is code.
So much so that the ARRL and W5YI VEC's send it at 16wpm on the exam. But
its all "no-code" to a select few idiots on RRAP. No smiley.

CW requires a human modem. That's fine for those who want to emulate a
modem. It should be as optional as is any other mode.

You have a work ethic? Yet you complain about all the other Blacks on your
bus?

> and overcoming my earlier objections to having to learn
> what I thought (incorrectly) was an outdated and ineffective
> communications skill.

That's your problem. I learned the code without prejudice. It was my
on-the-air experience that turned me off.

> Having proved myself wrong,

No doubt you'll continue the trend the rest of your life.

> I ultimately
> became a True Believer in the Morse/CW mode.

Did you quit smoking, too?

> It sounds to me

> to be of your liking -- a common NCTA characteristic.

I had no preconceived notions. I bought in to the inventive licensing lie.

> However,
> just because I didn't care for the code testing requirements in

> that they should have been reduced and/or eliminated

Oh, I agree. Today I think it should be eliminated because it is
irrelevant.

-- and I'm
> glad that they weren't prior to my getting my Novice ticket

Me too. I'm glad you were made to do something irrelevant and meaningless,
and that you didn't like it is icing on the cake.

> Too bad you didn't have the same advantage of
> superior licensing requirements that I was able to benefit from!

But I did. Ha!

CW use was around long before the modem was developed. It would appear
that modems emulate humans.

I've heard that feeding a TNC (which is roughly equivalent
to a phone modem) to the audio input of an FM transmitter
is not the best way to transmit data over a radio channel.
It was done that way because everyone had FM transceivers
and were using modem chips to design and build TNCs with.
It was expedient but somewhat inefficient.

If you gots a compooter handy doing all the work and don't use it to lend some intelligent flexibility to the system but merely use it as a big scoreboard that is a vast effort and expense toward a less than half-vast improvement. If you sit up nites dreaming up a coding structure that does not contain some major clues to its tuning and decoding you have no improvement whatsoever. If you have the clues and don't use them, the designer is a nincompoop.

You want to see the ultimate in raw stupidity, sit with your tuning knob trying to get the boops and beeps right and then have to tell the software it is SITOR not Baudot/Murray so you can watch it on a screen. Or only slightly less inane, tune to the display until it likes you.

That is bad digital.

Not defending the NCTA, but gee, but a group that also wants things a certain way, following a certain belief as long as it matches theirs, and to do certain things a certain way, in other words imposing a certain morality or choice of decisions sounds like the Republican party.... (reference Germany in early 40's) ("Do like I preach, not like I do" or "It's my way or the highway" mentality)

I am neither aligned with the Republican or Democat party or what is referred to as left and right winged as far as I am concerned. Thinking that there is only two possibilities is closed and small mindedness. The political spectrum, as far as I am concerned is more like the spokes from a wheel as opposed to linear thinking.

Ryan

My enthusiasm for HF is not what it what it used to be. Me thinks I will stay a SWL'er like I originally was, for a while as far as that part of the spectrum is concerned. I can only speak for my local area, but I have never heard yet a full blown arguement, or profanity other than the occaisional use of the word "hell" (heard on 4 times in almost 2 years) and that was during a stressfull situation a person saw occur directly in front of them. (We all slip once in a while, no matter how perfect or prudent we think we are. Only one person that is that close to perfect and he's got a severe aversion to high places combined with nails!) Anything that I have heard that would be construed even in the most vague sense of an argument were of the debate format. One night there was me, and 3 others who wound up holding a debate on a particular subject, with four of us with clearly different opinions on the matter, and we all acted and operated in a way that would impress anyone. As far as that goes, whether or not we agreed with one another, we got along, and that is most important thing. And I also believe we all learned a few things from the debate. For the record, this was for over 3 hours the four of us held this debate in the "roundtable" format on a simplex 2 meter freq.

There was another post with the past few days that sums up my feelings about operation..... get to know locally, and slowly but in a postive manner move outward. That also applies for my knowledge of ham radio. I met the requirements set forth at the time, and will never stop learning. That is the beauty of ham radio; there is so much damned stuff to learn, that you could never learn EVERYTHING in one lifetime.

Yeah, that is true also. I just seem to find much more professional operation about the 50mhz mark. Granted, as stated in another post fairly close to when this exact message is posted, I am making my observations from what I am experiences here locally. I cannot speak for people in your general locale.

As a firefighter, I *must* be a gentleman. I am sure there are some people that I would wish to chat with... It is just a combination of things, along with what was discussed in this immediate thread, that has kind of left a bad taste in my mouth, as a figure of speech.....
Guess I am gonna have to find some form of proverbial mouthwash to get rid of that, to entice myself to get on HF. I better do something soon before the CSCE's expire. (Cash them in or lose them)

Ryan

I believe from what some hams have referred to as cycles hams go through. Repeater usage, and even club/event participation is related to the sunspot cyles in some form or another.

Our repeaters around here have about a 30 minute per day usage. Took recording survays, and that is the average for most all of the repeaters within my local areas. That includes any nets, repeater time statements, and repeater I.D.'s. There have been a few rare instances outside of that, but for the most part 30 minutes total usage per day. Did this with a VOX recording program with all of the repeaters 4-5 times each, for a 24hr. period. Just wanted to prove to someone here locally that wanted to say the repeaters ar e over utilized.

In this activity I discovered it is a wonderful tool, the recording program that is. I am now recording the public service nets, and SKYWARN nets for post-critique and also for people who may have to skip the nets due to other obligations. Saving this as a medium quality MP3 makes it a nice, small file.

If these "old timer's" beleive in what they say, and in their "knowledge", should they not be sharing that "wealth of knowledge" with the "new-timers" on the evil no-coder allocations?? Seems to me that is the best way for them to dictate and change what they seem to be bitching about the most..... through education/elmering.

Granted there is going to be some that will never be reached, but there is a good percentage that could learn from the seasoned op's if they actually bother to consider the VHF/UHF frequency allocations as "real ham bands."

Ryan KC8PMX

3534. An interesting thougt about Field Day

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-15 10:28:13 UTC
From: KC8PMX <kc8pmx@NOSPAMdiamondcs.net>
Message-ID: <abu3553d4v@enews3.newsguy.com>
Source record: 42809

I was discussing this recently with a ham....

Should Field Day be rescheduled for a weekend closer to the times that schools and colleges are still having classes? Something like the first weekend of June instead?

I ask this because this would be a great chance to maybe get some more youth in the hobby, since it is easier to reach a large body of people when they are actually there. From a promotional standpoint, advertising F.D. in the schools, might be the impetus (sp.?) to get something for the youth to work on over the summer.

(I know that some people don't want anything to EVER change, but wonder if this has any merit?)
(Ed, as our "unofficial" ARRL representative, watch this thread. Unofficial meaning not necessarily sanctioned by the ARRL, more or less coincidental as a representative.)

Dave, it wouldn't appear that way at all. Prior to the modem, humans
emulated an electro-writer, scratching dits and dahs on a paper tape.

Would you prefer to be known as emulating a modem, or emulating an
electro-writer? Your choice. There are no other alternatives.

Well, yeah..... But that isn't why it took so long. I have a hearing problem with major holes in my hearing and tinnitus. I think that for years I mentally tuned out most audio so that the tinnitus didn't drive me crazy. To learn CW, I had to kind of untrain myself to process things audio-wise. And yes, it took over 6 months of a couple hours each day.

Remember, just because it is easy for some doesn't mean it is easy for others. I had to work my kiester off to learn Morse. Glad I did it tho'.

I dunno Brian. All the arguments aside, I got to get my license. I don't mind working hard for my hobbies.

I don't really have a problem with the CW requirements. At least they have some use. Let's try an excercise in getting rid of things we don't like or don't see a use for:

My own pet peeve is the stupid frequency allocations. Why test for that? At my station, I have a nice chart from the ARRL with the bandplans on it. Get rid of 'em!

I also don't have much use for the inane questions about how long before a space station transmission you have to notify the authorities. And how long after. I'm not likely to ever do that mode of operation. It is a mode specific thing. Get rid of it!

I'd rather see more questions involving calculations. My favorite part of the whole test. Set me down with a calculator or even a slide rule (am I the only person left who likes those things?) and a bunch of problems and I'm in hog heaven.

Now let's ask other people what they don't like or have any use for. We'll get a lot of different answers. So many that you will find that eventually you might as well scrap the test altogether because someone somewhere doesn't like any part of the whole testing scheme.

It was simple, I wanted to be a ham, so I did what was asked of me to become one. The tests were easy, the CW was not. Too bad for me there. But others had problems the other way around. That's life in the jungle.

Lessee now....before humans domesticated the horse, they emulated horses by walking around, but since they couldn't do it nearly as speedily, they just had to learn to lasso the beasts....

Before the wheel was invented, humans had to emulate one by rolling up in a little ball to travel smoothly.....only worked on downhill grades, tho..

Gosh I guess poor ol' humans were really emulating a gas engine, too. Had to get their 'go' from somewhere.

Before stoves were invented humans had to emulate them by rubbing sticks together to make something burn.

Before Tom Edison came along humans had to emulate a light bulb by using that burning to see at night.

I finally figured out Brian and Carl's problem. They just don't feel worth anything as humans. After all, all we ever did, or ever do, in their view, is emulate something technical that some other human invented. With that poor a feeling of selfworth, no wonder they can't actually DO anything.

The selfworth is there. The point is that as humans we have devised
ways to eliminate the mundane and routine activities by creating
the technology and the devices to do the same things humans
did in a faster, more efficient, and literally untiring manner. THAT is
where we derive the self worth.

There is also probably a few hundred thousand rigs capable of 2m
operation that would be rendered useless if 2m went away.
Just how quickly those rigs would pass into the hands of the
illegal ops folks is anyone's guess, but I'd bet the equipment would
quickly migrate into their hands. Such a situtation would create
another illegal CB like band of 2m if hams were "kicked off" by
the FCC.

Just my thoughts.

>
> I don't really have a problem with the CW requirements. At least they
> have some use. Let's try an excercise in getting rid of things we don't
> like or don't see a use for:

We can disagree as to the merits of CW testing. I'd have NO
problem if CW was "tested" as a knowledge base related to the
mode itself rather than a skill test to determine if someone can "copy"
morse characters at a minimum speed.

> My own pet peeve is the stupid frequency allocations. Why test for
> that? At my station, I have a nice chart from the ARRL with the
> bandplans on it. Get rid of 'em!

I presume you mean get rid of the questions which ask you to
regurgitate band edges, etc. I agree for two reasons:
(1) The frequency chart should be a basic component of
everyone's ham shack and (2) the bands and subbands have
and will continue to change over time.

> I also don't have much use for the inane questions about how long
> before a space station transmission you have to notify the authorities.
> And how long after. I'm not likely to ever do that mode of operation. It
> is a mode specific thing. Get rid of it!

Agree 100%. The most useless memorization excersize I ever
engaged in.

> I'd rather see more questions involving calculations. My favorite part
> of the whole test. Set me down with a calculator or even a slide rule (
> am I the only person left who likes those things?) and a bunch of
> problems and I'm in hog heaven.

Agree 100%. Additionally, the ones that already exist need to be
"expanded" to include more variety of variables to minimize
memorization and emphasis knowing the formula and how to
use/calculate the answer.

> Now let's ask other people what they don't like or have any use for.

Add electrical and RF safety as a priority for Tech. Add emergency
communications concepts for all...different levels of knowledge
and expectations for the different licenses.

> We'll get a lot of different answers.

I sure hope so. At least this becomes a positive discussion
for a change.

> So many that you will find that
> eventually you might as well scrap the test altogether because someone
> somewhere doesn't like any part of the whole testing scheme.

I disagree. I think there will be significant concurrance.

> It was simple, I wanted to be a ham, so I did what was asked
> of me to become one.
> The tests were easy, the CW was not. Too bad for me there.
> But others had problems the other way around. That's life in the jungle.

True, and just as times and test requirements change elsewhere, the
same will apply for ham licensing. My dad HAD nno choice but to
learn and take a drivers test using a manual 3 speed column shift
automobile. Today you get the license without any need for
knowledge of manual shifting. Once licensed you are free to
still drive a manual gearshift auto.

Cheers,
Bill K2UNK

Richard, seems no one actually addressed his query. I'd say starting from ground zero, a week, tops, would be necessary. It goes beyond the tech ticket. Look at a multiple guess question where you are given a 1000 ohm resistor and a capacitor (a value, in uf or nf or pf will be given) and a frequency. Now, this is to see if you can calculate the impedance, right? Look at the multiple guess answers:

a) 100 + j200
b) 100 - j200
c) 200 + j100
d) 200 - j100

Duh! Why reach for a calculator? Other questions are similarly difficult (would this be on the tech, general, or extra theory?).

I remember the multiple guess for the 1st phone. What is the colorburst frequency? All answers began with 3.579 .... one had to know the true answer. Likewise, the multiple guess format (which either is being or has been changed to a fill in the blank) for cw. Back when, you had to have one minute of errorless copy at 20 for the extra. I'm not complaining about the reduction in the cw format, I'm just pointing out how much easier the test is. Also bear in mind that most of us now have testing in the local area. When I decided to get back into radio, I only had to drive 4 miles. A lot different that driving 60 miles to Buffalo, NY, to the FCC.

Anything you pass, you keep credit for for a year (should one try for a higher class ticket and fail the code). It used to be 'fail and sail' for the CW test. You passed that first in order to take the theory tests. In any case, when I decided to get my ticket back I simply walked in and tested out - and waited for the ticket to arrive.

Best answer is go to the library and borrow the book on the technician class ticket to see what will be asked (assuming you are cheap), or, if you don't want to drive that far, Rat Shack sells manuals too. Of course, you can order from the ARRL as well if you don't mind waiting a week. It isn't brain surgery, for sure!

BTW Richard, I wanted to run a microwave link to a friend about 12 miles from here. Start reading the regs and - yep, easier under part 15! I know where I can get a free dish, but in a city lot, my co-worker can keep her 12 foot dish (which she is trying to give away!). Yes Dick, we don't have to go to Disney World - we are already living in fantasy land!

BTW, I accidentally left off the correct answer to the impedence
question. e) none of the above. Senior moment. It should either be
a 100 ohm resistor or all of the 100s in the answers should read 1000.
Now, if a brain-dead like me can screw up like that, imagine how easy
the tests are!

Similar questions exist using the resisteor and an inductor.

This was on the Extra as I recall. I agree, if you understand the
basic of impedance then all you needed to do was eliminate the
three that were impossibilities based on the resistive factor
being 1000 (no calculation needed) and then the correct answer
being either +j or -j for the appropriate component
given in the question itself.

I would suggest, however, that the "average" prospective
layman test taker without a techical training background
wouldn't necessarily make that instant recognition. Never-the-less
I'd rather see at least two or more answers that would require
calculation of the non-resistive component based on the
value of that component and the frequency. Using the
example Jim gave, the 4 answers should have been something
like:

a) 1000 + j200
b) 1000 - j200
c) 1000 + j300
d) 1000 - j300

Bzzzzt. Wrong!
The formal exchange of ideas has been completed.
The FCC has listend to both sides and made their decision regarding
TEST requirements. Larry and anyone else is free to discuss
their opinions regarding morse testing all they want.

The ability to learn, use, encourage use, preach
use is the same today as always. Nothing in the NCTA "agenda"
opposes the learning and use of morse code.

Bill, you offer a very reasonable accomodation. Your suggestion would make a lot of sense, and these type of offerings as multiple choices would likely be sufficient to prove the individual has a basic knowlege of the subject. I personally feel that basic knowlege of operating practice and safety should be sufficient to obtain an entry class license. The purpose would be to allow the individual some air time, gain experience, and ensure they are not too likely to hurt themselves nor others whilst enjoying the hobby. For more advanced tickets, more theory should be involved, but not college level theory. The hobby should be to allow people to experiment and have fun, not prove they are already a rocket scientist. Specific questions on specific modes may not make much more sense than testing cw. However, one should be aware of bandwidths occupied by various modes. Some understanding of why we don't allow 19k baud on 75 meters. Hopefully, as you suggest, we may get some good input on this subject. We shouldn't try and lock people out, yet we should ensure that new operators, whatever their class, have sufficient knowlege to ensure that they may persue the hobby without disrupting or endangering others.

These are the number of unexpired FCC ARS licenses held by individuals
on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of May 14, 2002:

Novice - 38,344 (decrease of 10,985)
Tech - 240,510 (increase of 35,116)
Tech Plus - 79,744 (decrease of 49,116)
General - 139,023 (increase of 26,346)
Advanced - 85,556 (decrease of 14,226)
Extra - 100,733 (increase of 21,983)
Total - 683,910 (increase of 9,118)

Now we're getting somewhere. I haven't seen the new Extra exam, but hopefully this is the direction in which it is headed

> > Now let's ask other people what they don't like or have any use for.
>
> Add electrical and RF safety as a priority for Tech. Add emergency
> communications concepts for all...different levels of knowledge
> and expectations for the different licenses.

Sounds very good. Some hams I know think the rf safety part is overemphasised. I withheld judgement until the day I got my first rf shock 8^).

> > We'll get a lot of different answers.
>
> I sure hope so. At least this becomes a positive discussion
> for a change.

I'd like to put together an imaginary test with some of the suggestions.

Lets say......

Technician:

10 questions on operation procedure - ID'ing, etiquette, non-commercial operations, modes and the like - all relevent and important.

5 questions regarding emergency operations.

2 questions regarding public service.

5 questions on RF safety - similar to what is done now

5 questions on electronic components - to include two questions on simple RF circuitry like high/lowpass filters.

5 questions on RF terminology - VSWR FM, AM, etc not complicated stuff.

5 questions on Ohm's law - at least 3 involving calculations.

5 questions regarding antennas.

42 questions total. If anyone got excited, we could add 8 more, but I don't think it is necessary.

The questions should be of a practical nature, that which will help ease the prospective ham into the fold. It will be slightly more difficult than the present test. The prospective ham should expect to need a calculator, and a command of high school math as well as very

basic electronic formulae should be known.

Next post will have my ideas for the General test.

Pass a 35 question exam with 75% (26 questions) correctly answered - multiple choice: 1 of 4.

As for knowledge: The question pool (all possible questions which appear on the examination) is public.

As for skill: None, beyond being able to read and write. The Technician class license is the entry level class and therefore is designed for those who have no operational experience.

Perhaps not designed as the entry level license, but in practice, it IS the
entry level license, most certainly now and since April 15, 2000, now that the
novice license is effectively gone (except for renewals).

3557. So the ARRL does nothing for you...eh?

SB QST @ ARL $ARLB029
ARLB029 Landmark bill could provide amateurs relief from restrictive covenants

ZCZC AG29
QST de W1AW
ARRL Bulletin 29 ARLB029
From ARRL Headquarters
Newington CT May 14, 2002
To all radio amateurs

SB QST ARL ARLB029
ARLB029 Landmark bill could provide amateurs relief from restrictive covenants

A bill introduced in Congress May 14 could provide relief to amateurs prevented by private deed covenants, conditions and restrictions--CC&Rs--from installing outdoor antennas. Rep Steve Israel (D-NY) has introduced the ''Amateur Radio Emergency Communications Consistency Act.'' The measure is aimed at preventing private land-use rules from ''unreasonably interfering with'' the installation and use of ''appropriate antenna structures'' for amateurs. Rep Greg Walden, WB7OCE (R-OR)--the only Amateur Radio operator in Congress--and Rep Pete Sessions (R-TX) have signed on as original cosponsors.

The measure contains but one sentence: ''For purposes of the Federal Communications Commission's regulation relating to station antenna structures in the Amateur Radio Service (47 CFR 97.15), any private land use rules applicable to such structures shall be treated as a state or local regulation and shall be subject to the same requirements and limitations as a state or local regulation.''

The bill, which does not yet have a number, is expected to be assigned to the Telecommunications and Internet Subcommittee of the House Energy and Commerce Committee.

After the ARRL ran into a brick wall trying to convince the FCC to include CC&Rs under the limited federal preemption known as PRB-1, the League's Board of Directors agreed to pursue a congressional remedy. ARRL President Jim Haynie, W5JBP, and other League officials met with Israel, Walden, Sessions and others on Capitol Hill earlier this year to discuss the prospect of such a bill and how it should be worded. With the proposal now in the legislative hopper, Haynie

says the ''really hard work'' is up to the amateur community, League members or not.

''It becomes important for all of us to write your congressman, call your congressman and voice your support,'' Haynie said. ''This will have to be a grassroots effort, and we're going to pull out all the stops.''

Israel, whose father, Howard, is K2JCC, said in a statement read into the Congressional Record that his bill seeks to ensure the continued viability of a volunteer public service resource. ''My bill would provide Amateur Radio licensees with the ability to negotiate reasonable accommodation provisions with homeowners' associations,'' Israel said, ''just as they do now with governmental land-use regulators, to ensure that our nation is not left with areas devoid of the public safety services amateurs can provide.''

Visit the US House of Representatives ''Write Your Representative Service'' Web page http://www.house.gov/writerep/ for information on how to contact your representative.

ARRL requests those contacting members of Congress to copy ARRL on their correspondence--via e-mail to ccr-bill@arrl.org or via US Mail to CC&R Bill, ARRL, 225 Main St, Newington, CT 06111. Please include your name and address on all correspondence.

The problem with that approach, Bill, is this: The usefulness of Morse is
in the skill. Testing other things about Morse ("how many dits in H"?) is
like testing on shift patterns and clutch types rather than manual transmission
skill. ("Where is reverse on a 5 speed VW transmission?")
>

>engaged in.

I agree with most of the above, too. However, the FCC tests these things for a reason. If they are not on the test, how can the FCC hold a ham responsible if he/she breaks the rules? It's my understanding that the FCC requires that the question pools contain questions on the regs - all the applicable regs - for just this reason. Perhaps K2ASP can speak to this aspect of testing.
>
>> I'd rather see more questions involving calculations. My favorite part

Yup.

>> Now let's ask other people what they don't like or have any use for.
>
>Add electrical and RF safety as a priority for Tech. Add emergency
>communications concepts for all...different levels of knowledge
>and expectations for the different licenses.

I'd say the biggest problem is in how the tests are made up and graded. All questions have the same weight, and a new ham can be totally ignorant of certain things and still pass. I'd like to see the test in sections, so that you'd see a minimum of, say, 6 safety questions on the Tech, and you'd have to get, say, at least 4 of them right to pass.
>
>> We'll get a lot of different answers.
>
>I sure hope so. At least this becomes a positive discussion
>for a change.

We should also consider what privs the licenses convey. I think the current Tech is simply inadequate from a safety standpoint, considering that it allows full 1500W power on all VHF/UHF, even if a new ham gets all the RF exposure questions wrong.
>
>> So many that you will find that
>> eventually you might as well scrap the test altogether because someone
>> somewhere doesn't like any part of the whole testing scheme.
>
>I disagree. I think there will be significant concurrance.

Opinions will range from practically no testing to the equivalent of an EE. Somewhere in between is the "right" level.
>

Exactly. But would you consider a test of gearshift patterns to be
an adequate substitute for a driving test?

Back before WW2, FD was the first full weekend in June. It changed to the
fourth full weekend after the war.

>I ask this because this would be a great chance to maybe get some more youth
>in the hobby, since it is easier to reach a large body of people when they
>are actually there. From a promotional standpoint, advertising F.D. in the
>schools, might be the impetus (sp.?) to get something for the youth to work
>on over the summer.

Excellent point!
>
>(I know that some people don't want anything to EVER change, but wonder if
>this has any merit?)

I think it has some merit. One of the goals of FD is publicity for the ARS.

The main problem I see is that it would put FD in direct competition with
end-of-school-year activities like exams, graduations, proms, etc. The kids we
are trying to reach may be doing other things that weekend. This may be why it
was moved from early June to late June.

>(Ed, as our "unofficial" ARRL representative, watch this thread. Unofficial
>meaning not necessarily sanctioned by the ARRL, more or less coincidental as
>a representative.)

Although FD has been "the fourth full weekend in June" for more than half a
century, most of the hams I know think it's "the last full weekend in June",
despite educational efforts by folks like me. In most years the two definitions
are one and the same, but once in a while (like this year) there are five full
weekends in June.
End result is confusion and some no-shows. Maybe it should be the last weekend
in June, or the first.
--

Historic note:

For the first few years (1933-35?) there were actually two FDs per year - one
in early June and another in late August. The late August one was not nearly so
popular as the June outing, as was discontinued.

Dan, I know it will not come as a surprise to you, but there are some folks who would bitch if you hanged them with a new rope.

In a not-so-long-ago thread here on rrap, there were folks (licensed Amateur Radio operators) adamantly opposed to the ARRL attempt to gain relief from antenna-unfriendly CC&R's. W5TIT comes to mind, but there were others. I'm drafting a letter to my congress-critters urging them to get behind the passage of this bill.

Yes, and the brains behind the only functional internet via cellphone caper is another OT in Japan. He will freely admit that he barely groks the technology but set out to get content and better yet revenue out of it as part of the plan.

It's nice when a plan comes together.

How about having "field month" on the four weekends in June. This shouldn't be much of a problem since most clubs make their own plans. I don't see any logistical problems with that. Attending more than one field day would allow for greater exposure to Amateur Radio activities.

Also, multiple days would increase the number of attendees. Next field day will be my first Field Day and I would almost miss it because a relative scheduled a family event in June. Luckilly, the event was on another weekend.

Let's not get caught up in this too much. IF you must test
for a skill, then clearly you must have a skill test. But, the states
don't care IF you blow out your clutch or gearbox at
all, so they don't mandate manual shift testing as a skill test to drive at
all.

Back to what we think should be tested.

Cheers,

You derive self worth from the application of technology? That is scarily funny on one hand, and eerily sad on another, like some unfortunate empty character from the mind of Kurt Vonnegut or James Barrie. I derive self worth from love given and received; from the values and social contributions that I've instilled in my offspring; from the sense of community and ethics with which I serve my employees and employer. There is no self-worth attached to my choice between using existing Amateur Radio operating modes or fiddling around with a new one.

This would seem reaonable, but lets see another argument.

From: "Bill Sohl" billsohl@mindspring.com
>Let's not get caught up in this too much. IF you must test
>for a skill, then clearly you must have a skill test. But, the states
>don't care IF you blow out your clutch or gearbox at
>all, so they don't mandate manual shift testing as a skill test to drive at
>all.

Therefore we should have no testing at all. You should just have to attend 3 days of classes and they should hand you a Technician, General, then Extra class licence. Right now, we have a question pool. Many people passed the Technician test after a 1 day "licence in a day" class. Did they remember the material the next day? Most likely not.

Question pools do not prove you understand the material. Since, we do not know for SURE that anyone knows the material and no harm has been done by this, we should not require anyone to pass the tests to get the various licence classes. They should just hand it to you after attending 3 days of classes.

The Morse code test uses actual code tapes which you must copy, so in order to pass the Morse code element, you have to understand Morse code to some extent. Not everyone needs to know Morse code - only those that want to get a licence above Technician.

Therefore,
(1) No knowledge of electronics is required for a Ham licence.
A question pool test does not test this for sure, so this is unnecessary.
(2) No knowledge of operating procedures is required for a Ham licence.
A question pool test does not test this for sure, so this is unnecessary.
(3)Some people, but not everyone needs to know Morse code.
The Morse test requires you to understand Morse code, so this is neccessary for a licence class above Technician. Therefore, keep the Morse test, unless it can be proven that its removal would cause no harm. At any rate, Morse code is not needed for everyone, only those people that want to get a licence above the Technician class.

Not to cast asparagus on Joe Taylor (who has a Nobel prize in Physics which makes him much brighter than me!), but his JT44 is the ultimate in extreme specialization, designed to solve one single problem -- weak signals.

This extreme focus places some significant limitations on the practical use of his mode.

It requires the computers at all stations involved to have their clocks set within +/- 1 second of each other. It can only accept errors of -2 to +4 seconds to this standard. I don't know of any other digital mode which even CARES what time, date, or year my computer clock is set at!

It is hardwired to accept only messages of precisely 22 characters, and all transmissions are exactly 25.1 seconds long, without variation, with 4.9 seconds of mandatory "turn-around time", adding up to a nice even half-minute to send 22 characters at which time you are obliged to be silent for a full half minute, even if the response from your correspondent is simply "R" (and 21 null characters of padding). In other words, it is slooooooooooowwwwwww -- max throughput under perfect conditions is 22 characters in each direction (44 characters total) -- 9WPM under perfect conditions.

It has horrendous overhead -- under perfect reception in the 135 time-intervals it takes to send a message, only 16.3% of the time is used to send the message, the remaining time intervals are devoted to synchronization and repetition. In other words, 83.7% of the transmission time is overhead. There is no provision to trim back the overhead and increase the payload under good conditions, a feature of even the dumbest digital protocols decades ago.

Now tell me again how "right" this digital is! It looks lovely for very slow communications under extreme weak signal conditions with very stringent requirements on computer clock synchronization. Beyond that narrow focus, even a couple of 10WPM Morse operators would move more traffic.

Most clubs would pick one weekend out of the four (or five this year).

Now have you ever sat and tried to drum up contacts during the last couple of hours on Sunday, after the preceding operators have worked everything that rose above the noise floor on every band from DC to daylight.

Now, can you imagine how boring Field Day would be if there were only 25% (or 20%) of the clubs participating on a given weekend?

> I don't really have a problem with the CW requirements. At least they
> have some use. Let's try an excercise in getting rid of things we don't
> like or don't see a use for:

We can disagree as to the merits of CW testing. I'd have NO
problem if CW was "tested" as a knowledge base related to the
mode itself rather than a skill test to determine if someone can "copy"
morse characters at a minimum speed.

Bill:

The effective use of the Morse/CW mode is nothing more and
nothing less than an operational communications skill. Moreover,
it is a skill which cannot be exploited by hams unless the operator
acquires a minimum level of proficiency. The way this skill has
been developed in the past is through a requirement to test for
this skill at progressively higher skill levels, and an incentive to
achieve these higher skill levels was increased privileges on
the HF amateur bands. This system worked well for years, and
resulted in an ARS which included a large number of licensees
who could effectively exploit the CW mode. Now that the incentive
is removed, the ability for hams to exploit the benefits and
advantages of the Morse/CW mode will eventually disappear.
Is this a good thing for the ARS?

SNIP

> Now let's ask other people what they don't like or have any use for.

Add electrical and RF safety as a priority for Tech. Add emergency
communications concepts for all...different levels of knowledge
and expectations for the different licenses.

I'd like to see some hands-on practical testing of basic ham skills.
Something like "Here's some pieces of coax, a PL-259, a female
BNC connector, a female N connector, and a female SMA
connector, a soldering iron, and all other necessary tools. Pick
any two connectors, and properly install them on the appropriate
piece of coax (different types given to match the application usually
associated with the respective connector)."

Next: "Here's a 2-meter HT with a fully-charged battery pack, the
VFO memories reset, and the manufacturer's instruction manual.
Program the memory channels for the following frequencies:

146.52 (simplex)

146.61 (-600 kHz offset)

147.180 (+600 kHz offset, CTCSS 156.7 hz. encode only)

145.21 (-600 kHz offset, CTCSS 77 hz, encode and decode)

147.540 (simplex)"

Next: "Draw a block diagram of a properly set up amateur HF
station showing the following:

An HF transceiver and power supply, microphone, and headset

A multi-mode Terminal Node Controller

A personal computer

A sound card to computer interface unit for software-based digital modes

An antenna

A station ground

A Morse code key or keyer/paddle combination"

I could go on and on, but you get the idea.

> We'll get a lot of different answers.

I sure hope so. At least this becomes a positive discussion
for a change.

> So many that you will find that
> eventually you might as well scrap the test altogether because someone
> somewhere doesn't like any part of the whole testing scheme.

I disagree. I think there will be significant concurrance.

With the exception of practical hands-on knowledge testing as
described above, I can't think of much that is currently on the
tests with which I disagree, except that I obviously would also
like to see the clock rolled back on the 13- and 20-WPM code
test requirements.

> It was simple, I wanted to be a ham, so I did what was asked
> of me to become one.
> The tests were easy, the CW was not. Too bad for me there.
> But others had problems the other way around. That's life in the jungle.

True, and just as times and test requirements change elsewhere, the
same will apply for ham licensing. My dad HAD nno choice but to
learn and take a drivers test using a manual 3 speed column shift
automobile. Today you get the license without any need for
knowledge of manual shifting. Once licensed you are free to
still drive a manual gearshift auto.

However, those who have never been required to take their driver's test using a manual gearbox automobile are much less likely to learn how to drive one, and as a result, the benefits and advantages of manual gearboxes (better fuel economy, lower air pollution as a result of smaller engines being required for a similar level of performance, lower maintenance costs compared to automatic transmissions, etc.) are lost forever. I am all for requiring new drivers to take a test in a manual gearbox car or light truck.

BTW I took my own driver's test when I was 16 years old, in my mother's 1966 Mercury station wagon that had an automatic transmission!

Dave:

Well, I won't be asking for a piece of *that* action! I do believe Brian
used to be a Weather specialist in the Air Force, and if so, considering
the time span of his career, I'm sure he's quite familiar with electro-
writers, indeed!

Brian:

You're right, I do judge them. I judge them because their behavior warrants a harsh judgment against them. I live in a world where there are readily definable absolutes, where the evidence which is readily at hand is not ignored in order to serve an agenda which states that all men were created with the right to equal outcomes. I don't live in your world of universally-applied gray areas, of benefits of the doubt given in absolutely every case and in perpetuity, and the politically-correct coddling of groups of people who were raised in a world of dependency and refuse to leave it, even though they way out is clearly available to them. So go ahead, whine away. It's what you do best, and what we expect of you.

Looks like you missed the point, Dick. Human progress is measured by how much
mundane stuff can be taken over by machines leaving humans with more leisure
time to do the things they enjoy.

But would necessarily be more localized than CB, at least at the
height of the sunspot cycle. The repeaters could be eliminated and
2m is not all that useful without repeaters. Most 2m simplex operation
is akin to a local phone call.

Ain't no way I would consider it for HF or much of anything else except EME but for that purpose it is slicker than an eel in a bucket of castor oil. I am not so much enamoured of the outcome but of the approach, the management if you will. Clock setting is simple even if the Doctor is In sends people to a busted link and 43 channels at 10.766 Hz ain't exactly narrow.

BTW when I first heard of the Doctor is In column, I half expected Gene Scott to be in QST.

But the biggest thing to me is that it does adjust in the software for time and frequency which seems to me, other than thinking thru the problem as a whole, is what makes it an intelligent approach. If you gotta get the boops and beeps on freq, you are just using a relatively intelligent compooter as a big scoreboard.

I just though since the students typically get out of school in the first week of June, and it is about 3 weeks at least after, that there is definitely a chance that any promotional activity may get forgotten by then.... Just and idere.....

> Although FD has been "the fourth full weekend in June" for more than half a
> century, most of the hams I know think it's "the last full weekend in June",
> despite educational efforts by folks like me. In most years the two definitions

Now there is an idea! Or maybe the first or second week of school of the fall terms.... September is still fairly moderate in temperature and weather in general, even here in Michigan, and it would work great to tie this in with promotion of the ham radio classes that some clubs offer in the fall.

It has been stated many times, but we definitely need to promote amateur radio to people in the 30 'n" under categories.... You are the one that seems to post the information about license numbers. I wonder if age could some how be factored into those calculations. I can honestly guess that the overwhelming majority of hams are in the 50-70 year old age bracket, and over the next 20 years or so, we will lose alot of those hams to natural (and unnatural also) causes of death. This and the severe underpromotion of amateur radio will be the death of our hobby, not some silly arguements about testing.

I have talked with a couple of teenagers that just got licensed recently and they feel severly dis-illusioned. They say that there is no one to talk

to..... at least someone close to their age around here. Up until about 3 months ago, I WAS the youngest ham in our county, at 31 years old.

>Was, "Well, there you have it", a positive or negative response to my
>suggestion that digital experimentation is a good thing?

No, it wasn't.

>That is the
>entire crux of the argument.

To you, but not to anyone else.

However, it doesn't matter. W0EX's answer, above, clearly shows that
"Well, there you have it" indicates agreement with digital experimentation
being a good thing. So, in that context, "Well, there you have it" is a
positive response.

>Do you want to settle the argument or
>mealy mouth your way out of it?

The arguments are settled, bot the real one and the one you made up.
W0EX thinks digital experimentation by hams is a good thing, and "Well,
there you have it" was a positive response in that context.

>Based on Dick's history of responses to my postings, I am 99 44/100

My point is simply that if Morse is going to be tested, it needs to be tested
as a skill. You obviously agree on that point, so we can let it rest there.

>Back to what we think should be tested.

OK

I'd say there are really two points: what to test and how to test for it. For
example, safety seems to be a pretty common requirement to most folks,
and there are safety questions in the current exams. But the exams themselves
are given in such a way that someone can get all the safety questions wrong and
still pass. Not a good thing.

Perhaps you derive your self worth from these social things, but not all do. People do not want to be around me for my sparkling personality, or my good looks. Although I'm no social recluse, and enjoy my contributions to society, my own self worth and self image are based upon my works. It means something to me that people can depend on me to get the job done.

It uses OOK in a pattern similar to Morse to arrange black dots on
white to resemble letters. Early versions used tape, now a sound card
can send the results to your video card for display.

It isn't considered a digital mode, even though it uses OOK, because
all the interpretation is done from the images by the person reading the
results. They refer to it as a "fuzzy" mode.

But it is part of the reason that I do not look at CW Morse as a true
digital mode, and think of it as "fuzzy".

Admittedly, there are those who "officially" define it as a digital
mode. Personally I think this is to make it sound like OOK Morse is this
amazing thing that was so far ahead of it's time.

You have three states. State 1 would be a short burst, State 2 would be
a long burst, and state 3 would be nothing at all. The reciever must
infer exactly what states 1 and 2 are from the length of state 3. If any
of these three states are missing, the signal becomes meaningless,
either a series of long or short pulses, (of course, you can't tell if
they are long or short, because you have no reference) or they become
one single pulse. All the states carry critical information.

All of this probably has something to do with why computer programs
often have difficulty translating Morse CW. If it was truly a digital
signal, translation to text would be simple and precise. The only errors
would be on the part of the sender.

It would be difficult to have a field month:

Setup and teardown can be pretty exhausting. Our club puts up a
portable tower, masts with a big dipole on it, and a number of other
antennas and stations. We start work as soon as allowed, and tear down
afterwards, which takes several more hours. We would have to drastically
curtail our setup (admittedly extensive) or only do one weekend of the 4.

My XYL simply wouldn't stand for losing me from Friday to Sunday
evening every weekend in June. She is happy with one weekend, so I don't
want to push it. 8^)

I suspect if we went to this sort of setup, it would actually harm
Field day, because of a dilution effect.

Well, I understand the logic on their part, but if you don't get the particular question in the pool, then the pool and their logic don't work together.

Yes, that is scary to me also. Even beyond the RF exposure, they should have some info on RF shocks. Until I got my first one, I thought "no big deal, at only 100 watts". Tis a big deal, and hurts.

Maybe a few more questions on RF safety would be very good.

This one is interesting, and of course a problem. But let's see what we could do here.

The VE's could have a class in which they have the students get familiar with soldering equipment. have the person solder a few things together ala your suggestion. Give the applicant a batch of resistors, a multimeter, and after they read the color code and predict what values the resistors are, have them read the things with the multimeter. There can be other things like this. Simple stuff, keeping in mind that the techs are often at the bottom of the learning curve.

The applicant takes this portion of the testing at the class at which he or she attends. The VE/ instructor would verify that the applicant did okay on this portion of the testing. Now here is where I end up with a problem. In my case, I did all the studying and testing on my own, and took no classes. So I would have a problem here, unless the rules were arranged that I would have to take the class.

But it is still an intersting and needed part of the ham experience IMO.

It was an excellent thought--but the problem is, not all
schools are on the same schedule. Even in Michigan alone (you mention
being here as well) there are several different schedules. For
example, some colleges and Universities _do_ start classes the first
week of June--others (the one I teach at included) have already
started their Spring/Summer term--Winter ended the first week of May.
Still others (mostly those on a quarter system, versus a semester
system) won't start a new term until mid-June, or even later.

I _definitely_ agree with the concept of moving field day to a
different time. The concept of "fourth weekend/last weekend" _is_ one
that could confuse too many people. Setting it as the _last_ weekend
of a month (or the first, of course) would resolve that immediately
and, if June was still preferred, would do so with minimum
interruption to anyone's annual schedule.

>It has been stated many times, but we definitely need to promote amateur

>amateur radio will be the death of our hobby, not some silly arguements
>about testing.

I agree completely. While (obviously) some young people are
entering the ARS, the majority of them aren't attracted to it at all.
Without them, Ham radio is _not_ going to grow in the future.

>I have talked with a couple of teenagers that just got licensed recently and
>they feel severly dis-illusioned. They say that there is no one to talk
>to..... at least someone close to their age around here. Up until about 3
>months ago, I WAS the youngest ham in our county, at 31 years old.

That's one of the problems, but there are others as well.
Probably the most relevant among them is the use of the Internet. In

recent years, teens have taken to perceiving the net as a community (the same way many Hams view amateur radio, of course). They communicate using Internet web boards, IM, chat, video conferencing, and other similar real time or near real time tools. Admittedly, the same tools are available to Hams--although it's pretty hard to use fast scan TV (equivalent to video conferencing) to communicate with hams in other areas, due to bandwidth restraints. But many teens view the tools available to amateurs as actually much "cruder" than their own (i.e., a youth with a 768K cable modem or a high speed DSL line is unlikely to be impressed with HF packet or SSTV speeds), as well as much more expensive (try setting up an adequate HF station using new equipment as cheaply as anyone can set up a multimedia computer system), difficult to install and maintain (installing a computer today is as simple as taking it out of the box and plugging it in to the wall, the monitor, the speakers, and the telephone line or cable tv modem), and undependable. The fact that they are communicating by radio, versus hard wired connections, isn't terribly meaningful to most teens--particularly since they've grown up with cell phones which, essentially, do the same thing as a 2m rig and a repeater network, and do it both cheaply and w/o need for a license. Finally, youths see no reason to either study for an exam that only allows them to do the same thing they are doing on their computers already (from their perspective) or to censor themselves as to topic and (unfortunately today) language--both of which are necessary to good radio practice and neither of which is a major concern on the Internet. Tell a youth interested in a career in political science that he can talk to someone in, for example, China but must not become engaged in a discussion of the "benefits of capitalism over communism" or the "excesses of Mao and the Cultural Revolution" for example and, since he's been doing precisely that in Internet mailing lists and newsgroups for some time, he's likely to tell you you're nuts! The lack of regulation implicit in the Internet is a strong attraction for youths--even very intelligent, well spoken, and mature ones--since it allows them complete freedom of expression as well as the ability to experiment as much as they please with no concern for violating laws that are, in part, the result of International compromise.

We need to find new reasons for youths to be attracted to ham radio--and the way to do that is not to emphasize field day (which most non-hams have no interest in anyway) but to create opportunities for them to explore areas of radio they CAN'T explore on the Inet. For example, my son (18, a Junior in college, and an "Internet addict") could care less about talking on the radio--he's "worked" more countries in chat then I have on HF, and I'm a dx fan. On the other hand, when I showed him that it was possible to communicate with the Space Shuttle on the ham bands, to view sophisticated astronomical and meteorological images using fax modes, or carry a radio in a shirt pocket capable of talking world wide (in ideal conditions on 6m) even if you're miles from a power line or telephone connection, he showed more interest. Unfortunately, after listening to my communications on

the air, which (like most ham contacts) were far more oriented toward ham radio topics than toward topics of interest to a teen or young adult w/o a focus on radio, that interest was pretty hard to sustain.

We're still drawing a number of new hams from the ranks of our youths--but unlike the sixties and seventies (when the cb craze--back when it was still clean and communications were possible--was in full force) it isn't a "step up" for them to move to ham radio today--they can already do pretty much everything using other methods that we can do on the air. If we really want the numbers to increase, we need to focus on finding areas that will (1) appeal to large numbers of teens (electronics used to do so, but that interest has--for the most part--been replaced by an interest in computer science) and, (2) encourage experimentation in those areas to attract more experienced hams to interact with the newcomers--the surest way to encourage them to remain in the ARS instead of exploring it briefly and then going back to the Inet.

Actually, it was based on a concept of contractual freedom.
Unlike laws and ordinances, CC&Rs are _voluntary_ limitations accepted
by the purchaser. You _can't_ "pass" a CC&R that is binding on anyone
after they have made their purchase--it can only be introduced prior
to sale. To many people, the concept of the government invalidating
those agreements is a clear threat to their right to enter into a
binding contract and is an infringement of the private sector.

While many have argued that in many areas it is impossible to
purchase a desirable home where no CC&Rs are in effect, the fact
remains that it IS possible to do so and even if it weren't that
wouldn't justify government intrusion. If, for example, no one chose
to open a fast serve restaurant in your community, it would certainly
not justify a government agency requiring full service restaurants to
open drive-thru windows and sell low cost food. While a home purchase
is far more important than the purchase of a Big Mac, the principle IS
the same. Why should the government have the right to limit the
restrictions YOU as seller place on a piece of property? If the buyer
isn't satisfied with them, he or she has every right to buy from
someone whose agreements are more compatible with their needs instead.

One argument never voiced here, btw, concerns non-hams. If a
person who is not a ham takes an interest in CB radio, for example, or
in shortwave radio, police scanners, or a similar area, he or she
would remain restrict by CC&R antenna limitations. To see his or her
neighbor granted an exception (by law) to those restrictions simply
because his/her interests are in ham radio instead of SWL is bound to
be angering to such an individual--and with good cause. As hams, we
may _claim_ that the ARS exists for emergency communications, and that
all hams are potential emergency communicators and thus should be
exempt from antenna restrictions. That claim, however, is hollow as
most of us know. There is a relatively small percentage of hams who
are sincerely interested in emergency communications (look at the
turn-out for disaster preparedness practices--it certainly doesn't
represent more than a small fraction of the licensed amateurs in any
given community) or in message handling--but for the most part hams
are hobbyists (claims to the contrary by a few members of this news
group not withstanding) who have no more (or less) interest in

emergency preparedness than anyone else in their community. Why should someone whose only interest is chasing dx or participating in contests receive special treatment by the government simply because his or her chosen medium is radio instead of the Internet?

Just a few thoughts as to what the "other side" may see as valid reasons to oppose the regulation.

In a democracy where majority rule exists, limits are
placed on the power of the majority. If the majority
would favor that certain individuals have their rights
subverted, then in the United States their rights are
defended by the US Constitution.

In the US today, the courts have decided that the
normal use of residential property includes amateur
radio antennas. Of course, deed restrictions can
limit what could ordinarily be considered normal use
of residential property. For instance, deed
restrictions on a tiny number of properties forbid the
consumption of alcohol on the property, with the
ownership of the property reverting to the seller if
alcohol is consumed on the property.

However, the trends in property development have
gone far beyond deed restrictions on a tiny number
of properties. The simple truth is that since about
1970 the number of new homes sold in the US by
developers that did not have blanket deed
restrictions placed on the property forbidding any
and all amateur radio antennas is approximately
ZERO. No new homes for amateur radio operators
whatsoever.

Is the reason for this because of majority rule? No.

Simply put, majority rule did not play any part in this.
In this case, competitive fervor made the decision.
The developers of homes and subdivisions
discovered that there was no limit that could be
placed on them that would prevent them from
adding restrictions to deeds.

Did the developers place these restrictions against
amateur radio antennas on these deeds because
they were interested in serving majority rule? No.

Did the developers consider the part played by
amateur radio in disasters and other times of stress
when these restrictions were created? No.

Did the developers consider the community
well-being when these restrictions were
created? No.

Did the developers limit their consideration to a
single issue -- the potential for increasing their
profits -- when these restrictions were created? Yes,
emphatically yes. Deed restrictions against amateur
radio antennas exist on virtually every home built
in the US for over 30 years for the simple reason
that the sellers of the properties believed that if
the early occupants of the developments erected
ham radio antennas that the sales of homes would
slow slightly, cutting into their profits.

Here's another view from a Florida ham. (KH2D/W4)

Well, how about this. Let's say we take away your drivers license
when you get to be sixty. Because "a group of land/homeowners"
in your neighborhood thinks you are too old and senile to drive.

Or how about if the Bored Of Directors in your neighborhood
decided that 15 mph was WAY to slow for a speed limit in your
subdivision, and change it to 95 ? Should they be allowed to do
that ?

Would you support that too ? I doubt it.

I don't think the CCR bill is about putting antennas where people
don't want antennas put. I think it's about people making 'rules'
they should not be allowed to make.

For example, the CCR's in my neighborhood say you are allowed to
have:

"....three dogs, two cats, two ducks." for pets.

So with your reasoning, I assume it's OK for a building contractor
(he wrote the rules, and he doesn't even live here) to decide that
none of the kids in the neighborhood are allowed to have hamsters,
turtles, frogs, or goldfish for pets ?

Guy next door to me has two kids. So when one of the kids gets
to be 8 years old and wants a hamster, should we tell him "Tuff.
Go buy another house someplace else if your kid wants a hamster" ?

I think if you do some checking, you'll find that the majority of CCR's
are not written by a "group of Home/Land-Owners, who for whatever
reason, have banded together". Around here, the builder writes and
files the CCR's with the local government before the houses are even
built, much less sold, in the hopes of adding some 'class' to his pressed

wood and cardboard houses and in turn increasing the value.

The line I like best in our CCR's is the one that says each house must have "a mailbox of wooden structure". I can't wait until the first guy on the Bored Of Directors complains about my little tiny antenna. Cuz when he does, 300 plastic and metal mailboxes are on the way to the dump, along with numerous turtles and goldfish :-)

I could have bought 3 acres of land and a nice mobile home in the boonies, but I didn't. I bought a house in a subdivision with a nice tiny lot and neighbors real close to me. There are other things to consider in life besides ham radio, like the convenience of shopping, schools, local medical facilities, personal safety, etc. Quality of life is more important to a few hams than a shoebox full of post cards. People have to live where they can afford to live. Not every ham who is 86 can take care of 3 acres and a moblie home, so you are saying it's OK we nix his hobby because of where he has to live ?

One of my neighbors like to bitch about a guy up the street with a boat in his driveway. The boat is worth about three times as much as my neighbors 3 cars are, brand new nice looking boat, but some people just need something to bitch about I guess.

I think the CCR bill is about whether or not the guy at Atlantic Builders, who built this house 6 years before I bought it, has the right to decide that I can't put up an antenna, my neighbors kid can't have a hamster, and everybody in the subdivision has to have a wooden mailbox even though he doesn't live (and has never lived) in the neighborhood.

Our system of law was not intended to be based on "rules" made by anybody who doesn't have anything better to do than make some....

Well put, Hans.

The FCC wanted Congressional prodding - now they're going to
get it.

Of course PRB-1 has its weaknesses (not definite enough in
asserting exclusive jurisdiction) but it's the best that we
have to work with at present.

I said nothing about hugging trees, Al Gore or automobiles. You're 0
for 3. To many, human progress has little or nothing to do with the
number of devices invented in order to create leisure time.

Apparantly you have not operated anything other than the 'fun mode' on VHF.
A simple 10 element yagi and 10 watts can work several states on AM on 2
meters. How do I know? I did it back in the early sixties.

Now we have SSB and digital modes, including CW on V/Uhf. A modest SSB
setup can work out to 300 miles in most parts of this country.

> by the purchaser.

You're forgetting that property is offered essentially as is, try and remove that clause from the contract and see if they'll sell it to you. There is nothing voluntary about it - other than to pass on the property entirely. Some feedom.

To many people, the concept of the government invalidating
> those agreements is a clear threat to their right to enter into a
> binding contract and is an infringement of the private sector.

What about the infringement of the landowner to use HIS property resonably as he sees fit? Doesn't it seem strange that we would allow some third party to dictate how we are going to live on a piece of property we own as a condition of the sale? It's the equivalent of buying a boat with a condition that you could only use it on the ocean when you live in Colorado. WHile I realize that local governments have all sorts of laws that control useage, at least they are always negotiable. Deed restrictions are not.

My personal opinion is that we have become so anti-social that instead of being reponsible to each other as neighbors about how our community looks, we would rather pass the buck to someone else to do it for us.

Well Jim, that is when the "Darwin" syndrom takes over and the new hams who
don't know safety soon encounter overhead power lines, High Voltage on the
plate circuit, etc, etc and remove themselves from the ranks of ham radion
(in addition to the gene pool).

The FCC has pre-empted those CC&R's which prohibit outside
TV antennas. Why should someone who shoud someone be able
to put up a TV or satelite simply because his or her chosen
medium isn't cable?

Just my .02. I can see both sides of the argument--especially if one
happens not to be a
ham--but I tend to be extremely independent when it comes to *any* outside
entity telling me what I can do with my own property. Once I've paid for it,

the idea of some
blue-haired, busybody old lady telling me what I can erect, own, or keep in
my driveway
for as long as I shall live there just don't "git" it. So strongly do I
feel about it that, in order for someone to be able to do that, they must be
able to get around on the backside of my 12 ga. shotgun before I can get off
a round. Hehe! Now, having vented my spleen about CC&R contracts, the way
I handled it was to buy an older home. In so doing, I got, not only the
ability to put up all the antennas I want, but also a much better
built house in a very low crime, older neighborhood. I got real plaster
walls instead of
drywall. I got 2 X 12 floor and joist construction, same in the ceiling. I
got a floored attic, a full basement, 2 fireplaces, a garage-workshop, and,
again, nobody can tell me
that I cannot have a 100' tower (as long as I follow reasonable and prudent
safety rules
and city ordinances). At this point, there are no rules against antennas
and towers in my
town. I LOVE my real, red oak floors, knotty pine kitchen--and, of course,
my radio
shack down in the basement--cool in summer and cozy in winter with the wood
stove
a-simmerin'.

ethics
> with which I serve my employees and employer.

I'm sure you were very proud of your offspring's first utterance of "Dump
Huck" on the playground. You must have stood a little taller that day.

There is no self-worth
> attached to my choice between using existing Amateur Radio operating modes
> or fiddling around with a new one.

That's probably not true, but if you say so. Dick, Bruce and Larry sure
couldn't get away with making that statement.

Dave, you must realize by now that we dispense with the "In my opinion...."
much of the time. Anyway, which are you? A modem emulator or an
electro-writer emulator?

Why?

Does Larry react to your question the same way he would have reacted to it if you had been a No Code Technician? No, and there is ample proof of that in the archives.

Does Larry treat people fairly? No.

Does Larry respect my opinions? No evidence of that - yet.

Does Larry seem interested in a fair and two-way exchange of ideas? No. Its his way or the highway - "Don't let the door hit you in the ass on your exit of amateur radio."

Meanwhile, you Dan, keep prolonging the hoax. Congrats. I guess you get to stand a little taller in Larry's eyes.

Ryan:

Sooo, what were these lonely teen-aged hams proposing to *do* about
the fact they had "no one to talk to" ...other than whine about it? Were
they planning some sort of presentation to their classmates about
amateur radio, with a demonstration of HF voice, digital modes, and
maybe even some (heaven forbid) CW? Did these teen-aged hams
think of approaching a QSO with an older ham from a standpoint of
asking for his/her help with a technical issue, or just general knowledge-
gathering (assuming the "older" ham *has* the knowledge to give,
which may not necessarily be the case these days!)? Did these
teen-aged hams come to a local radio club meeting and introduce
themselves to their fellow hams and request their assistance in becoming
active participants on the local scene? (Hint: if they did arrive with
baggy pants, green hair, untied shoes, multiple body piercings and/or
tatoos, I surely hope they didn't expect to stay long!) Are these teen-aged
hams getting themselves involved with HF, or are they limiting themselves
to the handshack?

I think that teen-agers are just as capable of becoming active hams
now as they ever have been. It has always meant that they had to
and will have to interact with older hams. If these teen agers are
allowing their New-Age, dumbed-down culture get in their way of said
interaction, that's THEIR problem, not one of the older hams. There
is such a thing in this world as convention, and older people, older
hams in partucular, usually adhere to it. If these teen-aged hams are
expecting to present themselves as New Age punks and be given a
pass on it, they won't be attending very many radio club meetings
anywhere I've ever been a club member!

>techs are often at the bottom of the learning curve.

Mike:

Technicians are at the "bottom" of the learning curve? I thought that
the name of that license class was supposed to imply technical knowledge,
as opposed to skill in any particular operating mode, and more
particularly, *not* Morse/CW, the testing requirements for which have
been eliminated over a decade ago. Even in the "olde days" of the
5 WPM Technician-class license, the intention of that class was to
give expanded privileges to people whose technical knowledge and
skill would be applied to the further use of the (then) relatively little
used VHF/UHF bands. This concept worked, up to a point, and the
Techs of the pre-No Code Technician-class license era did, in fact,
earn a place of respect in the amateur community through their
development of repeaters and weak-signal V/UHF modes. However,
they did this with the partnership of General, Advanced, and Extra class
licensees who also, in those times, had technical skills far in advance
of even the Extra-class amateurs being licesned under today's lowered
standards. The only difference then was that the Top 3 (General,
Advanced, and Extra) also had the ability to effectively employ the
Morse/CW mode at useful proficiency levels (13 - 20 WPM).

What has happened to the notion of "Technicians" being "technical?"
Why should testing for practical, hands-on technical skills be done
in the context of doing the testing at the end of the class where those

technical concepts were introduced for the very first time, which would be the case for the majority of the students? Also, what has happened to the long insisted-upon notion that Morse/CW skill and technical knowledge have nothing in common, and that technical skill was the most important of the two?

The historical rhetoric of the NCTA has been that technical knowledge and skill always trumps mode-specific operational skills (Morse/CW in particular)? Therefore, I believe that practical, hands-on testing for basic technical knowledge and skills directly related to the safe and efficient set-up and operation of an amateur radio station can, and must, be expected of even the entry-level radio amateur. Therefore it is perfectly acceptable to test for this skill as a means of determining an ARS licensing candidate's minimum qualification to *be* licensed.

I gained the technical knowledge and skills which led to my ultimate licensing after rather long experience as a general electronics hobbyist, experimenter, and SWL. At the time I did finally get a Novice license, it was predicted by my then Advanced-class YL "Elmer" that I was a well-qualified candidate for an amateur radio license with the knowledge I possessed coming in, and that I would shoot directly to the Extra class in minimal time and with relative ease. Fortunately for me, both predictions came true. I make a point of my own experience because I do not consider myself to be anything particularly special as a radio amateur, and never did. I'm just an average person with strictly AMATEUR (i.e. non-professional, can't make a dime from it) technical skill. At the time I took my Novice license test, I could perform a myriad of "hands on" technical tasks which were not required of me at ANY time, right through my upgrade to Amateur Extra. I did, however ,have to demonstrate proficiency in a valuable communications skill, that of Morse/CW operation. I saw that as a very logical and practical trade-off, once I overcame my objections to same, and realized I was just as capable of learning the Morse code as anyone else.

I believe that prospective hams today are just as capable of learning how to solder well, terminate coaxial cables with connectors, set up station equipment, and perform other technical tasks as I was at the time I ascended through the "ranks" under a much more comprehensive and challenging set of licensing requirements. Therefore, I would give them no "end of course" VE certifications. The would come in to the testing session with the knowledge and skills they already possessed, or had recently acquired, and be tested for them in a thoroughly fair and objective manner.

> The applicant takes this portion of the testing at the class at which
>he or she attends. The VE/ instructor would verify that the applicant
>did okay on this portion of the testing.

Already addressed, above.

>Now here is where I end up with
>a problem. In my case, I did all the studying and testing on my own, and

>took no classes. So I would have a problem here, unless the rules were
>arranged that I would have to take the class.

This is a perfect example of why my concept of having the "hands-on" skills testing be treated as a routine part of a standard VE session makes logical sense. A lot of hams are like we were -- self-training, as Part 97 says we are. I have absolutely no problem with "classes" geared toward teaching the technical skills required for licensing, but now, they would be complicated by the need for the students to demonstrate "hands-on" skill during the testing process, apart from the training classroom environment.

If, as the NCTA has always claimed, technical knowledge and skill is more important than mode-specific operational skill, then my ideas along these lines should be completely acceptable to them.

> bandplans on it. Get rid of 'em!

I also use a look up table for frequencies. But let's extend your idea a
little. I worked in a weather station. We probably had a hundred look up
tables (lut) under the plexiglass countertop. The luts were extremely handy
and referred to many times an hour. Then we had a severe storm, rain gushed
through a hole in the roof, and the forecast counter was destroyed along
with a lot of electronics. We had to evacuate to an alternate work site.
But there were no look up tables there.

Like we scrapped the Morse sending exam? The RTTY and SSTV practical exams?
This is where the Morse exam falls down. Name one other practical
examination by mode? Now name a mode that's use is mandatory.

> It was simple, I wanted to be a ham, so I did what was asked of me to

So an amateur couldn't use a look up table or use a computer to copy 5wpm?

True, the name is a big misnomer. Among those who I work with, being called a good technician is one of the biggest compliments to pay a person.

> What has happened to the notion of "Technicians" being "technical?"
> Why should testing for practical, hands-on technical skills be done

> be the case for the majority of the students?

I'm in basic agreement, but would like to get some people started in electronics. Seems for good or bad, we have the tech license at the bottom of the heap. An there are plenty of people taking it who need the exposure to simple electronics.

I suspect that with exposure, the new techs will discover that along
with yakking that actually knowing something about the radio biz might
be fun

> Also, what has happened
> to the long insisted-upon notion that Morse/CW skill and technical
> knowledge have nothing in common, and that technical skill was the
> most important of the two?

Dunno, but by this time, I have the firm opinion that the ARS testing
procedure should be something of a challenge to pass. I'm not talking
about needing an EE degree. I'm talking about the prospective amateur
needing to expend *effort* to get the license. The applicant should be
serious enough that they work at it.

That being said, I don't see a huge relation between Morse and
technical ability. I do see the Morse as a seriousness filter. And that
is okay by me.

Weoooo, I better put my flameproof suit on here! 8^)

Trying reading what I've written instead of searching for meaning
between the lines. I didn't write anything about the inception of
morse. I'm not a railroad telegrapher nor have I used American Morse.
(See "...since the inception of radio").

> > I'll wager you've never even SEEN an

> Therefore we should have no testing at all.

Not at all. My example was related to ONE skill that the state
does NOT test anymore. I did NOT say the rest of a driver's
license test should be eliminated. The analogy was strictly to
a "skill" test...aka Morse Test if you will.

> You should just have to attend 3
> days of classes and they should hand you a Technician, General, then Extra
> class licence.

You are grossly exagerating my point.

> Right now, we have a question pool. Many people passed the
> Technician test after a 1 day "licence in a day" class. Did they remember
the
> material the next day? Most likely not.

Maybe they do, maybe they don't. Do you have anything
but your opinion on that?

> Question pools do not prove you understand the material. Since, we do not
know
> for SURE that anyone knows the material and no harm has been done by
this, we
> should not require anyone to pass the tests to get the various licence
classes.
> They should just hand it to you after attending 3 days of classes.

This thread was opened for a discussion of what should be
on the test. It appears you don't seriously want to discuss
that.

> The Morse code test uses actual code tapes which you must copy, so in
order to
> pass the Morse code element, you have to understand Morse code to some

extent.
> Not everyone needs to know Morse code - only those that want to get a
licence
> above Technician.

But there's no NEED for morse to be able to operate HF.
The FCC believes that and the morse skill test will likly
be toast after 2003.

> Therefore,
> (1) No knowledge of electronics is required for a Ham licence.
> A question pool test does not test this for sure, so this is unnecessary.
> (2) No knowledge of operating procedures is required for a Ham licence.
> A question pool test does not test this for sure, so this is unnecessary.

Sorry, does not compute.

> (3)Some people, but not everyone needs to know Morse code.
> The Morse test requires you to understand Morse code, so this is
neccessary for
> a licence class above Technician.

The test is ONLY necessary because the FCC and international treaty
requires it. The FCC gave you and everyone else ample opportunity to
submit comments, arguments, whatever to justify morse and NONE
were deemed of sufficient merit to keep a code test at anything but
a minimum required to be compliant with the treaty.

> Therefore, keep the Morse test, unless it can
> be proven that its removal would cause no harm.

Sorry, that's not how it works. Rules, regulations and requirements
set by government require justification. The burden of proof is
on those that want to KEEP the regulation.

> At any rate, Morse code is not
> needed for everyone, only those people that want to get a licence above
the
> Technician class.

This too shall pass.

Cheers,
Bill K2UNK

C'mon, Jerry, there is a whole list of things that "others" tell you
what to do concerning your use of "your" land. Where you can get water
from and what quality it must be. Where and how you can dispose of
your sewage. Where and under what conditions you can get electrical
power, What businesses you can conduct on "your" land....and on and on.

>So strongly do I feel about it that, in order for someone to be able
>to do that, they must be able to get around on the backside of my 12
>ga. shotgun before I can get off a round. Hehe!

And I know a lot of LEOs and DAs who would just love to see you try
that...it's called "unacceptable behavior" in "my ceowd" and we
put people in uncomfortable places (with no ham radios) for that.

>Now, having vented my spleen about CC&R contracts, the way I handled
>it was to buy an older home.

How old is "old" ?

>In so doing, I got, not only the ability to put up all the antennas I
>want, but also a much better built house in a very low crime, older
>neighborhood. I got real plaster walls instead of drywall.

Is that 'sposed to be an "advantage"? Not to me...I've "done"
drywall work in major modificatons/additions to homes that I've
owned, and although I'm certainly not the craftsman in the field,
it's much easier for me to work with than the lath and plaster walls
that I grew up with and first learned to do electrical "old work" on.

> again, nobody can tell me that I cannot have a 100' tower (as long
>as I follow reasonable and prudent safety rules and city ordinances).

And you would deny the same enjoyment to other hams who want to
live in a good home of their own choosing. That's pretty selfish.

>At this point, there are no rules against antennas and towers in my
>town.

They're coming.my man, they're coming. The cellphone tower folks have been fighting that battle for years. The average city planner does not know, nor care about, the difference if we are not vigilant. Step one is to take the power to restrict same out of their hands. We call it "exclusice preemption" and sadly, PRB-1 doesn;t go that far. We have to bluff the local authorities and HOAs into thinking that it does. (That's MY soapbox.)

>I LOVE my real, red oak floors, knotty pine kitchen--and, of
>course, my radio shack down in the basement--cool in summer and cozy
>in winter with the wood stove a-simmerin'.

To each hus own. I prefer the chrome-and-glass modern look with laminate floors . We use the two working (but unused) fireplaces to display my wife's sculpture and floral arrangements. No ashes to clean up, no wood smoke fumes to cause emphysema, and the power company did an energy balance and proved to us that it's a negative heating factor, i.e. we lose more heat in taking in cold outside air than burning the wood provides.

Yo each his own.

You want a mandatory skill test ONLY as a means to generate
new recruits. That is NOT what the requirements are for.

> This system worked well for years, and
> resulted in an ARS which included a large number of licensees
> who could effectively exploit the CW mode. Now that the incentive

> advantages of the Morse/CW mode will eventually disappear.

That is YOUR opinion. I strongly disagree. There will
be morse proponents and users for years to come.

> Is this a good thing for the ARS?

If morse does dry up and go away, I doubt there'd be any
great implication to the public or the ham community at large.

> > Now let's ask other people what they don't like or have any use for.

> associated with the respective connector)."

Not gonna happen. It's both a pain to administer and
subject to too much "interpretation" as to what a satisfactory
final result might be. Frankly I've never been very good
a connectors myself...and I did plenty in the Navy.

> Next: "Here's a 2-meter HT with a fully-charged battery pack, the

I took mine on a 57 Plymouth with auto...and as soon as I was
licensed I drove my own '50 Ford convertible with a 3 speed manual.

Here's another one of those little problems: Do we have
medical waivers for people who have any number of possible
ailments or disabilities: One arm, arthritis, lost fingers,
paralized arm, hand, etc?

Something to think about.
Cheers,
Bill K2UNK

I'm not sure if this is exactly correct.

It's my understanding that that deed restrictions usually say "no antennas", and do not specify what service the antennas are for.

It's also my understanding that one of the main driving forces behind the boilerplate was cable TV. The cable TV folks would wire new subdivisions for a "discount", secure in the knowledge that most people would sign up.

If the satellite TV folks can do it, so can we. And we should.

Here in southeast PA, K-12 schools typically don't let out until June 15 or so.
In years where there are lots of snow days, the last day of school can come
even later.

But you do have a good point in that the school-radio connection can be lost
too easily.

>> Although FD has been "the fourth full weekend in June" for more than
>> half a century, most of the hams I know think it's "the last full weekend in
>>June", despite educational efforts by folks like me. In most years the two

Perhaps what we need is a "Publicity Day", rather than having Field Day
try to serve all purposes.
>
>It has been stated many times, but we definitely need to promote amateur
>radio to people in the 30 'n" under categories....

I agree 100%. That's what the ARRL "Big Project" is about. Another
reason I'm a member. But that project is only one step.

>You are the one that seems to post the information about license numbers.

That's me.

>I wonder if age could some how be factored into those calculations.

I would do so if there were a reliable source of that info. The FCC has done the on-again off-again thing with DOB information, so there is no complete database of how old US hams are. Surveys and reports are often very inaccurate because they do not take representative samples. For example, although I'm a fairly active ham, I haven't been to a hamfest in several years, nor to a local club meeting in a year or so. It's not because I don't want to go,
but because family and work obligations prevent it.

>I can honestly guess that the
>overwhelming majority of hams are in the 50-70 year old age bracket, and
>over the next 20 years or so, we will lose alot of those hams to natural

I'm 48, and been a ham 35 years in October.

>This and the severe underpromotion of
>amateur radio will be the death of our hobby, not some silly arguements
>about testing.

I agree 100%.
>
>I have talked with a couple of teenagers that just got licensed recently and
>they feel severly dis-illusioned. They say that there is no one to talk
>to..... at least someone close to their age around here. Up until about 3
>months ago, I WAS the youngest ham in our county, at 31 years old.

When I got started in 1967, I was the youngest ham I knew, for a long time. In my high school of 2400 or so boys, there were never more than a half dozen licensed hams. This was long before the 'net, video games, cell phones or even widespread cable TV. It didn't bother me that there was practically nobody my age to talk to on the air.

One of the things that attracted me to ham radio was the fact that on the air it did not matter what a person's age, gender, race, or socioeconomic status was. Hams' opinions of each other were based on operating skills and signal quality.

--

There are three basic reasons people become hams:

1) Technical interest in radio (building, experimenting, repair/restore, etc.)
2) Desire to communicate (ragchewing, public service, "honeydew", on-air community)
3) Fascination with radio operating (contesting, DXing, developing on-air skills)

Most hams' interest is a mixture of these three, and the mix can vary over time. But to
interest someone, or keep them interested, the mix must have things not available
elsewhere.

Who would decide which hams are worthy of busting the CC&Rs and which
are not worthy? Nobody in there right minds would even try to inject
any complexities like that into any hobby regulation legislation. And
for one other predictable, simple, practical reason: Exclude the dxers
and contesters in the legislation for instance and they suddenly clump
together and run some quickie "emergency comms" drills on the machines
and bingo, they're "qualified" and the whole thing would be rendered
farcical.
>
>
> Just a few thoughts as to what the "other side" may see as

It's all simple downhome standard U.S. special-interests politics. One
of the primamry ARRL missions is to advance the special intersts of
the U.S. ham communuity and it's doing that right now with the CC&Rs
in legislative bodies bodies all over the country. They're doing what
we pay them to do. It's as American as Chebbys and apple pie. I'll bet
that if I reserched the matter the first attempt at special interests
lobbying probably popped up within a week after the first U.S.
Congress was convened. Or maybe even before the first session.
>
>
If the SWLs and CBers have a problem with it they need to quit whining
and pump their own money into their lobbying organizations and get
them on the job. I do not ship my dues to the ARRL to pay for
advancing their interests.

No, that's a no-long-distance-charges call on your cellphone. You're
still going to be paying for airtime.

Given the popularity of FRS, I suspect a lot of people would find uses
for 2m FM simplex, especially since they can easily get a 30-50W
mobile unit for about what a 5W GMRS HT costs.

Maybe you missed the point. Why make an illegal transmission when one
can do the same thing on a cellphone for free (as long as one doesn't
exceed one's subscribed limits)? Are the rewards worth the risk?

I disagree.

The widespread use of boilerplate deed restrictions creates an effective
monopoly. The amount of available housing without such restrictions dwindles
because the restrictions are permanent. In many areas it is effectively
impossible to find properties for sale that are not restricted.

>If, for example, no one chose
>to open a fast serve restaurant in your community, it would certainly
>not justify a government agency requiring full service restaurants to
>open drive-thru windows and sell low cost food.

Not a valid analogy. Is there a community in America with no drive-thrus?
I think not.

Here's a valid analogy:

Suppose that 30 years ago a community decided to ban drive-thrus so
that the owners of local restaurants would not have to deal with the
competition. And suppose the ban was effected by means of deed
restrictions, which are singularly difficult to change. End result
would be no available real estate for drive-thrus.

>While a home purchase
>is far more important than the purchase of a Big Mac, the principle IS
>the same.

No, it isn't. Real estate is unique and non-portable.
In many areas there is no "new" real estate available - it's all been
"developed". Around here it is common for "old" houses to be bought
for the land and torn down so that "new" houses can be built - complete
with deed restrictions.

>Why should the government have the right to limit the
>restrictions YOU as seller place on a piece of property?

Because you are SELLING it. That means YOU won't own it any more.
Why should the seller's rights exceed the buyer's? Note that most
deed restrictions never expire and are nigh-impossible to change.

Would you support the right to deed restrictions that banned people
of certain races, religions, atheists/agnostics, gays, or the disabled?
I wouldn't.

>If the buyer
>isn't satisfied with them, he or she has every right to buy from
>someone whose agreements are more compatible with their needs instead.

If ands only if such a seller exists. They become rarer and rarer.

But the larger principle is this: Why should the seller of a property be able
to
impose arbitrary restrictions on an item being sold? Particularly when the
seller will have no interest in or responsibility to the buyer after the sale?

> One argument never voiced here, btw, concerns non-hams. If a
>person who is not a ham takes an interest in CB radio, for example, or
>in shortwave radio, police scanners, or a similar area, he or she
>would remain restrict by CC&R antenna limitations. To see his or her
>neighbor granted an exception (by law) to those restrictions simply
>because his/her interests are in ham radio instead of SWL is bound to
>be angering to such an individual--and with good cause.

Why? Those groups are perfectly capable of getting their own bills. The
satellite TV folks' exception only covers TV reception antennas - it doesn't
even extend to FM broadcast radio. Do you see lots of anger about that?

It is important to be clear about what the bill would do if passed. It would
NOT give hams blanket permission to violate deed restrictions or put up
any antenna they desire.

In most cases, what we're really talking about is being allowed to put up
a simple wire antenna or maybe a vertical. Or two. Yet in many areas
the rule is "no antennas" of any kind. That's simply unreasonable.

Slightly different question - is it unreasonable for an apartment *owner*
to restrict antennas on his property?

If that is true, then why did Dick respond negatively to my
suggestion that digital experimentation would be a good thing?
Methinks y'all speak with forked tongue.

When I said I would like to see as many hams experimenting
with digital systems as there were hams experimenting with
SSB in the late 50's, Dick replied, "Well, there you have it.
You don't know what you are talking about."

Jim, you may be able to rationalize that as a positive
statement, and if you can, you really have a talent for
delusions. In my book, "don't" is a negative.

True for CC&Rs, but not for HOAs' rules, which are also a serious
problem.

>If, for example, no one chose

Really? Damn, I guess I should stop wasting my time and getting wet
for those SKYWARN callups.

>There is a relatively small percentage of hams who
>are sincerely interested in emergency communications (look at the
>turn-out for disaster preparedness practices--it certainly doesn't
>represent more than a small fraction of the licensed amateurs in any
>given community) or in message handling

"Licensed" and "active" are two different things. Since the licenses
are good for ten years, there are a lot of licensed corpses out there.
Personally, I wouldn't let them check into the nets if they wanted to.
Others can't afford to keep their rigs working, or don't bother to
maintain a VHF rig at all.

Of the people we hear on the two primary repeaters daily, I'd estimate
70% or better turn up for our local NTS nets at least once a week, and
participation in area ARES/RACES training nets is pretty high most of
the time.

That's a *completely* different question; an apartment owner isn't
transferring all interest in the property to a tenant.

Insofar as how it relates to broadcast receiving antennas, look at the
restrictions they are allowed to place on those; can you put up an 80m
dipole in an apartment without leaving the 'area designated for your
exclusive use?' It ain't going to fit on my balcony.

That is what I suspected.

In my 35 years on the ham bands, I have found that abusive, profane and
inconsiderate behavior is practically nonexistent among amateur CW
operators. It's simply "not done". I understand the same is true of
"digital" modes like PSK31.

I suggest that you don't restrict your opinion and experience of HF amateur
radio to what you hear on the 'phone subbands. CW and digital modes offer
a very different environment and experience.

I wish it were that way everywhere, and on all bands. But there are "bad
apples" on all bands. Look up kg6iro on the ARRL website - not a nice story.

> There was another post with the past few days that sums up my feelings about

I agree 100%. After 35 years I'm still learning new ham radio stuff every day.

--

One important difference about local vs. nonlocal radio is the possibility of
actually meeting the people involved. The folks one can reach on 2 meter simplex
or one of the local repeaters are, for the most part, one's neighbors. On HF,
the anonymity is much greater, and the possibility of actually meeting someone
in person much less. Some people behave poorly in such circumstances.

I think this would be a good idea. Actually demonstate some techincal skills and operation skills, Morse code in addtion to a written test.

These days, these things are not required. Only some of the operational aspects, some basic antenna setup, knowledge of FCC rules are truly required. Amateur radio will not fall apart if there is no test on the technical part or a test of Morse code.

This is what should be the first licence class. Then, if you desire higher classes, you should be tested on the technical areas. Each licence class should have a practical demonstration required.

Lets not make Morse code required for those that do not want it.The technician, general, or extra class licence tests, do not test operational skills, and should stay that way. Operation certifications such as Morse, contest logging, emergency communicatios, could be included on an individual basis, but not as part of licence class structure (as Morse code is right now before you can upgrade above Technician).

Also, lets change the name of the licence classes. The name of Technician for the first licence class is not fitting to what is actually tested and required. Lets just call them basic, intermediate, advanced, extra.

Of course, the digital modes, including CW, do not lend themselves
well to emotional outbursts. If I am angry enough to utter obscenities,
my hands are shaking too badly to even send Morse code or type on a
keyboard but I could certainly squeeze the PTT button and scream into
the microphone. (Not that I personally would ever do something like that.)

CW doesn't change human behavior but, like a straight jacket, inhibits
certain forms of human behavior. Virtually all of those obscene HF phone
hams have passed a Morse code exam. It is simply extremely easier for any
ham who chooses such behavior to misbehave on phone rather than on CW.

The Morse is some work, at least from my perspective. I won't paint this issue with too broad a brush. The written was pretty easy for me, the Morse was not. Others will have difficulty with one, both, or will find the whole thing easy. I like to look at it from the average persons perspective. While some people are genius's, they are in the minority.

Obviously we can't make things so difficult that the brightest and most knowledgeable have trouble passing. That would exclude most of the rest of us.

I can vouch for the gentlmanly aspect of PSK31 comms. Only time I ever saw anything less than polite was when one fellow was telling another to turn down his power and audio drive - apparently for the umpteenth time. But even then it was a simple admonishment.

But it does take some time to get used to the Euro-Hams calling you "dear"! 8^)

It's more than that on PSK31, tho'. I never hear anyone throwing up a carrier to interfere with anyone.

And the comparison to a straightjacket doesn't hold either, because I think we've all seen plenty of typed profanity in the newsgroups. And the reason that Morse doesn't lend itself to profanity or Yelling is that it just feels silly to tap that stuff out. I know, when I was learning to send, I tried it (off the air of course) and it just felt dumb.

Dave, you dispense with trying to read between the lines. Try reading -the-
lines.

Morse was conceived to be copied by a machine with a pen dragging along a
paper tape. Now don't try changing the subject again.

Dan, the repeaters were vacated prior to HF being made "easier to get."

That's kind of off the subject, but since you throw that in what do we do with people who have ADD? And if they have something like ADD *and* one of these other problems, should they be exempted from everything?

There is also the business of finding out what the restrictions are in the
first place. Of course everyone should find them BEFORE signing anything,
but in some areas it's mighty difficult to get to the actual CC&Rs.
>
>>If, for example, no one chose

That's good.

But most important of all, any ham could become interested in emergency
comms in the future - maybe even as a result of having a decent antenna.

Unfortunately, there are some folks who will be unable to qualify for a license. Sometimes you just can't do some of the things you want to. For example, I'm physically unable to qualify for the local amateur baseball team. I'll get over it.

With all kind wishes,

>You're probably telling the truth, here. Was your opinion Pro-Code Exam, or
>No-Code Exam?

Brian:

What do YOU think? I was shouted down by a size 22 No-code Tech YL who's first reaction was "Oh GAWWWWD No!" the first time I mentioned code testing requirements, and gave a Betty Davis-like shrew tirade before I could finish my second sentence. This quickly degenerated to personal attacks from a few of her supporters. Hugh Turnbull's only remark: "Well, what about the digital modes? They're the future of ham radio!" Kay Craigie just stood up at the front of the room and allowed the NCTA-YL shrew to take control of the forum, making it a personal attack against me, with all of the classic NCTA bromides, and made no attempt to restore order to the meeting and allow me to even get my own comments all the way out. I had intended to ask them (the ARRL officials) what they were doing to support their 1993 BoD resolution to support code testing in any future proceedings on amateur license testing. I never got an answer to my question. It was the ugliest public scene I've ever witnessed, and the ARRL has been irrepairably damaged in my esteem, and my personal relationship with Turnbull and Craigie has been strained, ever since. This occurred at the ARRL Maryland State Convention at the Timonium, MD hamfest, May, 1995.

IMO, this is something that needs to be addressed by the individual
states; require the seller to provide a copy of *all* restrictions
before the sale is completed. Void them if it isn't done.

>>Tech study guide: $10
>>Tech exam: $10

>HAW! I love that one! Can I use it?

Of course.

>But most important of all, any ham could become interested in emergency
>comms in the future - maybe even as a result of having a decent antenna.

I hear a few people from time to time mention that they don't check
into the Late Net regularly because they can't have a good antenna at
home. Considering that:
a) it's 2m
b) I can usually hit that repeater on vacation from 90mi out with a
J-pole up at 15ft
c) at least one of our once-or-twice-a-week crowd has a good signal
from 45mi out with a mobile halfwave
they aren't needing a 27-element yagi on a 190ft tower, they just need
a way to get their HOA to let them put a groundplane on the roof.

In most cases the seller is powerless to remove them, too. Deed restrictions
are intentionally designed to be almost un-removable.
>
>> Unlike laws and ordinances, CC&Rs are _voluntary_ limitations accepted
>> by the purchaser.

Not true. Consider this: "Laws and ordinances are 'voluntary', too - if you
don't like them, don't live where they apply." That's what you're saying, in
effect.

>You're forgetting that property is offered essentially as is, try and
>remove that clause from the contract and see if they'll sell it to you.
>There is nothing voluntary about it - other than to pass on the property
>entirely. Some feedom.

Exactly.

>>To many people, the concept of the government invalidating

>Colorado.

Good analogy, with an added feature that the boat builder has no connection
with you after you buy the boat - yet you must still follow his rules, as must
anyone you sell the boat to.

>WHile I realize that local governments have all sorts of laws
>that control useage, at least they are always negotiable. Deed restrictions

>are not.

That is the #1 key point. Laws, codes, and zoning are all changeable, and exceptions are granted every day. Why should a deed restriction be above the law?
>
>My personal opinion is that we have become so anti-social that instead of
>being reponsible to each other as neighbors about how our community looks,
>we would rather pass the buck to someone else to do it for us.
>
Good point. Here's another: Many people simply accept the restrictions because it is simply too much hassle to avoid them. The builders put them in as boilerplate, without really thinking. ("We've always done it this way") and once they are in place they are all but unbreakable.

And they do not allow for changes in technology or the way we live.

There was a case in California where deed restrictions required that all roofs be covered with either wood (cedar or pine shakes) or clay tile (very expensive). Almost all houses in that area had wood covered roofs.

Then it was discovered that the wood roofs were a major fire hazard in the dry season. Sparks and embers from a nearby fires would cause it to spread much faster because the dry wood roof caught fire very easily. Replacing with tile was a huge financial burden on the homeowners. End result was that the deed restrictions were preempted and other roofing materials permitted. Was this a good decison, or should the homeowners have been forced to replace with the expensive tile? (Note: Nobody was forced to replace a good roof. The rules were about re-roofing.)

Ventenna is a great idea for that situation. It still violates the rules,
but only if someone notices.

Those were Larry's words, not mine. You would be hearing them straight from
him had you been a Technician. Its just more of the PCTA double-standard.
As an Advanced with 12+ years of experience, you get a pass for asking one
of the most basic questions in amateur radio.

> > Meanwhile, you Dan, keep prolonging the hoax.
>
> What hoax? This appears to be a delusion. Ask yourself Brian, why would
> I try to play a hoax on you? Besides, it would be too easy to pull off a
> hoax on a simple no-code tech.

The hoax is that an Advanced would ask such a silly question, then Larry
answers it with a straight face. I'm still not buying it. You two cooked
this up.

Why? Why do people troll?

Well there you have it. You know Larry, you've come on here with that same
size 22 YL attitude concerning no-code Technicians. Luckily, you're not
able to monopolize the group as she did, as we each get to have our say.

If you had to do the 1995 ARRL Maryland State Convention ARRL Forum again, how would you have handled it differently?

Awwww...

There is a qualitative difference between
a private baseball club that chooses
not to place you on its team and, say, a
governmental agency that grants licenses to
play baseball in public parks. That agency
would be hard-pressed to justify denying
a "baseball license" to someone in a
wheelchair simply because they never make
it to first on a base hit.

You guys just don't get it. *Every* licensing
requirement must be related to a clearly
enunciated regulatory purpose. This is the
basis of the deregulation process, of getting
the government, with it arbitrary rules and
regulations, off the backs of the citizenry.
This process was started by President Reagan
and, despite efforts by the Clintonistas to
hijack it and inject their liberal social-
engineering goals, continues to this day.

This is why I think (for Dave: "In my opinion") incentive licensing was
such a bad idea. The knowledge that is required to operate CW effectively
and safely at 28100khz isn't applicable to operate CW at 28099khz. Bah!
Its completely arbitrary.

This is the

The two states with whose real-property laws I am familiar
(Oregon and California) both require the seller to disclose any
CC&Rs, HOA Rules, or known defects of certain types which
pertain to the property within five days of acceptance of
offer, and there is an additional five day contingency after
disclosure in which the buyer can back out of the deal and get
his deposit back.

When we were looking at homes in metro Portland OR three years
ago, the Realtor would call her office on the cellphone and
have her assistant get a copy of any encumbrances (easements,
CC&Rs, and HOA Rules) pertaining to a property we liked from
the area's major title company which maintained copies for all
the developments in the area, The assistant would get the copy
by fax, and was instructed what to look for in terms of antenna
restrictions. We knew whether the house was worth considering
within an hour. In two cases the seller actually had a copy of
the CC&Rs on site, as was the case when we boight and sold our
condo apartment in California.

Then I would get involved in the detailed legal analysis of the
local ordinances and the encumbrances. If you are not really
qualified to do this analysis yourself, get the advice of a
qualified attorney. A home purchase is usually the largest
single investment that folks make.

If you are a League member, ARRL Volunteer Counsels will give
you an initial consultation without charge. That's a good time
to have the paperwork looked over for potential land mines.

Fan: n. A person who is a fanatical. [Abbreviated form of "fanatic."]

Fan: n. A device to blow air by use of a propeller or spinning blades.

With the way this newsgroup's posts are, some must wonder if there's any hidden relationship between these words in this context, especially where hot air is involved..... :-)

Here in PA, I had to specifically ask to see the deed restrictions before making an offer. My RE attorney had to dig them up from the files at the county seat. Even though this house is more than 50 years old, it has a page and a half of fine-print deed restrictions. Nothing against antennas, though, but a tower might
be difficult, as it may be considered a "structure" due to its permanent nature. In
fact, I do not know of any amateur radio towers in Radnor Township. Kinda odd, considering that Radnor was the home of Charlie Stewart.

Termite and radon testing must be done and such info is usually provided as part of the original package. Many sellers get a licensed home inspector to go over the house (costs about $300 and is worth every penny).

It would be very easy for someone to buy a house here and think they knew what they were getting, yet be in complete ignorance of deed restrictions. Many non-hams I know have no idea what deed restrictions are.

>
>Dan, the repeaters were vacated prior to HF being made "easier to get."

Brian:

The repeaters were vacated as a result of the Non-code tested HT-slinger Kerchunka-Punks getting on them and demanding to be regarded as Real Hams™ in spite of the fact that they have little or nothing in common with their 13- and 20-WPM code tested betters in the ARS, who consistently display superior technical knowledge and operational skill as radio amateurs. I, for one, have pretty much relegated 2-meters FM to the background of my ham radio experience, and prefer instead to enjoy HF digital modes and, of course, CW. Of course, for those of you "hams" for whom 2-meters FM is the be-all and end-all, I can understand your frustration!

Now, punk -- go ahead and make something of THAT!

(Why do I feel another scathing "Well there you have it" coming on?)

Bill:

Good question. Here's the short, simple answer: No. No medical
waivers. There is no guarantee stamped on our heads at birth that we
will be able to do anything and everything we want to do, and we're
simply going to have to come to the realization that amateur radio
is included among the list of things that aren't for everyone. If this
is in any way incorrect, I want the federal government to fully
compensate me for the career as a military and commercial airline
pilot I never had as a result of my eyesight.

Well, the internet is allways the whipping post when in comparison to
amateur radio. I beleive that there is a good selection of prospective
students in both junior high, high school and colleges/universities. Some
naysayers here may say that all in those categories are drunken/drug
doing/tattoed/pierced/punk rockers/gang members or any other combination of

the "bad kid" category, and some are, but there is a ton that aren't. After all, who the hell are these kids getting on the honor rolls? Guess if old-farts can blanket-blame all youth, I guess the youth can do the same?

>

True. The main fact is MORE needs to be done. I am struggling to try to attend the 500 plus schools in the 3 county area I live in, with little to no help from other hams. I am very comfortable in the public speaking arena, but am seriously lacking in the equipment category, which I believe would be important to kind of "plant a bug" in some of these potential candidates.

Hansl:

Shame on you for even thinking such a thing! Don't you know that amateur radio has to be all-inclusive, diverse, and all things to all people? Doesn't your radio club join hands around the campfire and sing "Kumbuya" at the end of each meeting?

>For
>example, I'm physically unable to qualify for the local amateur baseball
>team.

Horrors! I think you should immediately notify the ACLU, CORE, the United Nations, the NBA, and Queen Noor, and get them to accept you as you are for what you are, regardless of your "challenges" which make it impossible to meet their unfair and obviously unjustified requirements!

>I'll get over it.

Wrong attitude. You'll never get anywhere in AmeriKa thinking like that!

Mike:

Sure. After all, we have learned over the years from the code/no-code
testing debate is that amateur radio MUST be inclusive, environmentally-
friendly, tolerant, touchy-feely, harmonious with nature, non-ozone
depleting, diverse, etc. etc. etc. I think all African- and Native-Americans
should be immediately granted Amateur Extra-class licenses, as the
government owes it to them in reparation for past offenses committed
upon their "peoples." (Right about here is where we hear from Brian.)

Brian:

I don't know that I *would* have handled it differently. However, I would hope that should Craigie and Turnbull also be there, that *they* would handle the situation much differently, indeed!

BTW -- my "attitude" toward No-Code Technicians is based entirely on THEIR attitude and behavior. They want an easy way into the ARS, with full privileges granted for drastically reduced effort made in the licensing
process, and a demand that they be accepted as full-fledged hams in spite of having significantly less technical knowledge and operational skill in all areas of the hobby. Their demands are based on liberal, New Age concepts of "inclusiveness" and "acceptance," while they sternly reject anything that resembles the conventional wisdom regarding the need to learn and gain privileges through progressive skill development and testing.

Make something of that, PUNK.

> maybe even some (heaven forbid) CW?

I am sure that they may hopefully get into that. They are recent licensees as of this late winter/spring. I am sure once they are more comfortable with the hobby they may be able to positively promote the hobby.

Did these teen-aged hams
> think of approaching a QSO with an older ham from a standpoint of
> asking for his/her help with a technical issue, or just general knowledge-
> gathering (assuming the "older" ham *has* the knowledge to give,
> which may not necessarily be the case these days!)?

I am sure that would not be a problem if they required assistance. But not all amateur QSO's are about technical stuff. Simple rag-chewing is enjoyable also on a non-busy area of frequencies once in a while. I am sure that a kid still dealing with acne and the hormones does not want to hear about incontinence problems, hemmoroids, and other geriatric related issues. It is simply a generational thing. After all, in your case even, you probably prefer to relate to people you can relate to. (whomever that may be......)

Did these
> teen-aged hams come to a local radio club meeting and introduce
> themselves to their fellow hams and request their assistance in becoming
> active participants on the local scene? (Hint: if they did arrive with
> baggy pants, green hair, untied shoes, multiple body piercings and/or
> tatoos, I surely hope they didn't expect to stay long!)

Actually yes, and they attending our spring round of classes. They were the nephews of a ham that died recently. They are sort of his legacy.

I am sure based on your description listed above that EVERY teen or 20something MUST be dressed like that in your eyes. And of course every person over 40 must dress like those genetic-defectives I see on the golf courses every day during the spring or summer. Surprise, surprise, there is a ton of good kids, the ones we need to address, in the educational system that are the ones making the honor rolls (or at least in the 3.0GPA and above groups) that are achieving in other categories in life. Never stated that we should address the bad kids.

Are these teen-aged
> hams getting themselves involved with HF, or are they limiting themselves
> to the handshack?
>

Well... based on a teens available income, I am sure that the HT is a
starting point, and once either they have earned enough to purchase a HF
system, they probably will. I cannot speculate more than that about the
future. I can only guesstimate.

> I think that teen-agers are just as capable of becoming active hams
> now as they ever have been. It has always meant that they had to
> and will have to interact with older hams.

True.... but if there is hardly any reference point to learn that the hobby
exists, how can they become hams? Had I never gotten into SWLing or Scanner
Monitoring as a hobby, I would probably never have gotten into the hobby
either, and would not have been aware of it. I learned about ham radio from
this angle, not the typical CB direction that all new hams *MUST* have come
from, according to the "old school: hams.

If these teen agers are
> allowing their New-Age, dumbed-down culture get in their way of said
> interaction, that's THEIR problem, not one of the older hams. There
> is such a thing in this world as convention, and older people, older
> hams in partucular, usually adhere to it.

I am sure the kids I am referring to have no problem with following rules
and procedure as it is now, or if we were to time-warp back to the day of
when you were a kid. These are not the "bad kids" that you seem to group
all in one pile. These are ones that are doing good, get involved, and just
want someone to talk to even ten years close to thier age at least once in a
while.

If these teen-aged hams are
> expecting to present themselves as New Age punks and be given a
> pass on it, they won't be attending very many radio club meetings
> anywhere I've ever been a club member!

Understood, as I agree also. Where did you come up with the idea that these
two guys MUST be punks? These are two clean-cut, 3 point something GPA type
of kids. Of course again, it is the weak way to easily lump people into
categories to make ones self feel better.

Unfortunately Larry is of the set that no one will ever measure up to him, even if the others achieve more than him at some point in their lives. And of course it is soooo easy to lump others into categories when a person is so filled with hate.

Depending on the location in Michigan, some schools get out in the single digit dates of June, and some in the teen dates in June.

That should be every day. Clubs and of course individuals need to work harder on this. I am still trying to assemble a group of hams together for this purpose, but there is this lethargy recently, that needs to change. In other words, with alot of these people, you couldn't light a fire under their ass with a 1000 gallons of gasoline. There is a little over 500 schools in the tri-county area in which I am in, and I have this lofty goal, that we could encourage at least ONE new ham from each of these schools. Now that may be much to expect one student out of 300-500 students to get licensed per year, but I believe it is a beneficial goal. That would make 500 (or more) new hams within the Mid-Michigan area alone per year. Kinda a crazy thought eh? I just need a little help in the equipment category for the presentations.... I am very comfortable in the public speaking side of the presentation, and in fact, I am doing a presentation to about 300 or so law enforcement/ems/fire personell in June with the hopes of getting some of these people, albeit not necessarily of the youth set, but definitely of the mentality and training that would make them a positive asset to our hobby. (They are accustomed to recieving training and of course following rules.)

Understood, as stated in other responses, it would be nice for these people
to have someone to talk to even within a ten year spread close to their
age..... From what they say.

> One of the things that attracted me to ham radio was the fact that on the
air

Since when has this happened..... I see that to be the opposite from all
that I have heard. Not necessarily from all-out slanderous comments but
there is definitely a clear case of that from the various areas I have
traveled in Michigan, and locally. Granted, this is my local area, not
necessarily yours.

Maybe the digital modes may appeal to me, but I find no other amount of enjoyment in morse code. Jumping through whatever hoops to meet the testing requirements at the time of testing I have absolutely no problem with, but that does not mean I *must* enjoy it either. Come to think of it, the digital modes are about the same as why I do not like the internet other than for a research tool. I just do not care for internet chat rooms because simple fonts are the same cold impersonal way of communication, where no emotion, inflection or feeling is really inputted into the message. Text versus dits and dahs. I would much rather hear a persons voice. 90% of my operation is usually in public service/emergency applications, and the other 10% is the occaisional rag chewing while in the truck going somewhere. At least with voice you can tell the feeling behind the message. After all, except for a few emoticons, can you tell if I am postive about this message here? Or if I was "saying" it with a smile in my voice if I was actually talking and not typing. About the only chatting per se I like is either through email or newsgroups, which is like public email.... in my eyes. Kinda like writing letters but using a different medium to do so.

You are again confusing the requirements of a vocation with limiting
citizens' access to public property which was K7JEB's point. For instance,
if amateur radio operators were required to have 20/20 vision, it would
quickly be declared to be an unreasonable requirement. When access to
public property by citizens is involved, the requirements must be
reasonable and rejustifiable over time.

Working a double shift (sat eve/sun morn) and also had a class on saturday morning from 8am-4pm. My 3rd shift employer always plans their graduation ceremonies on the same weekend as Dayton and I know neither Dayton or my employer is gonna change weekends merely because I want them too.

I am sure the lack of funds to make the trip enjoyable is another factor too.

Only if it harms the property. I see nothing wrong with the ability to set up a portable antenna that does not create any damage to the property. In my own specific case, I cannot even have one of those "dish network" mini satellite dishes as an option to cable tv. Rules state absolutely no antennas whatsoever and no transmitting radios either. Guess I am in deep trouble with the cordless phone eh?

The only exception I have gotten from my landlord is that I mounted a thru-the-glass antenna and told him when he finally noticed it that it is an antenna for my fire department scanner/pager and he let that one drop for now. Little does he know it is actually connected to my HT when I am home. (shhh... it's a secret :)

> > bandplans on it. Get rid of 'em!

I agree slightly on this issue. As far as which specific allocations of which licensee can use within the bands may not be important, I do believe that knowing which specific band is which is still important.

As far as that goes, as long as you know which bands you can operate via a chart can be looked up easily while operating, the real knowledge is knowing about the theory portions of the test of knowing exactly how wide a signal is, so that a person does not transmit out of band, or outside of their privileges. That is more important than rout memorization of frequency allocations which can easily be referenced from a band allocation chart.

Agreed.... safety needs to be stressed in all levels of licensure.
Hopefully it reduces the amounts of calls that me and the brotherhood of
firefighters and medics have to respond to.
As far as emergency communications, I also believe there should be alot more
knowledge there too. Message handling, Traffic systems, etc.

>

> 147.540 (simplex)"

Piece of cake with the owners manual, except for the manual I have for the
Heathkit HW24HT (made by Standard I believe) which does not follow any of
the formats that Icom, Kenwood, Yeasu, Alinco, etc. I can, and have
programmed both mobiles and HTs for alot of different models, and I seems
rather simple. The Heathkit one is a real pain in the a** though.

Piece of cake also. It is simple schematic thinking. Just like
understanding a plumbing system, or pump operations on a fire truck.

That would be the "easy way out" to scrap a test like that.

And I believe as long as the morse code is being tested as a "operating
skill" all other modes of operating transmissions should be tested as well.
Voice and digital both as well as morse code.

Saw one of those column shifters years ago, and it freaked my out a little at first. Was so conditioned to think that any kind of manual transmission stick shift must belong on the floor. Thought the guy was trying to screw up his automatic transmission! :)

Not necessarily.... there may be some test appplicants who would normally be
able to take the extra test with fair results, but the rules say you must
have to take the tech and general written also. Think the questions from
the tech should be added to the general exam, and the questions for the
extra include all of the questions from the tech and general. If the extra
class is the top rung, there should be no problem with answering those
questions again, and would prove that the knowledge had still remained.

I am still a strong believer that the names of the license classes need to be renamed to something like this:

1st Class Amateur Radio License-----> Current Extra Class
2nd Class Amateur Radio License----->Current General Class
3rd Class Amatuer Radio License------>Current Technician Class with code.
4th Class Amatuer Radio License------>Current Technician Class without code.

As far as the novice, old tech and advanced class, I do not know where they may fit in this but this may denote a better representation than our current titles for the license classes.

Ryan KC8PMX

If the VHF/UHF ham bands were removed from the ARS and sold to another service,
would you continue to transmit on those bands illegally? That was the question.

I still argue for, and will continue to argue for, amateur radio licenses patterned after the aviation certificates.

The basic certificate is "STUDENT". The STUDENT can operate anything they wish with the accompanyment OR permission of the INSTRUCTOR. You want to get into the game? Take some instruction. Get the instructor to believe you are good enough to "solo" with your own equipment with the restrictions the instructor imposes to keep you from harming yourself or anybody else.

When the INSTRUCTOR thinks you are ready, he signs you off to take a WRITTEN and PRACTICAL test. You have your choice of several tens of thousands of qualified examiners to pick from. The examiners, in turn, came from the ranks of tens of thousands of hours and tens of hundreds of students as an instructor. In my 40 years as an instructor, I've never heard of ONE case of a corrupt examiner, so don't hand me any of that corruption bushwa.

So now you have a PRIVATE pilot AIRPLANE SINGLE-ENGINE LAND certificate. What does that allow you to do? More important, what does that NOT allow you to do? Take each of the words:

PRIVATE means I can't charge for my services.
AIRPLANE means I can't pilot gliders, helicopters, blimps, or anything other than airplanes.
SINGLE-ENGINE means I can't fly airplanes with more than one engine
LAND means I can't fly seaplanes.

Now, if I want any of those restrictions removed, I take the appropriate test to show I'm competent in the equipment.

How would we implement this?

Amateur radio operator, low power, voice might be a start.

Low power restricts you to (arbitrarily) 50 watts
Voice restricts you to any of the voice modes.

You want high power? You want video? You want CW? You want ???? Get thee to an instructor and practice the mode under the watchful eye of a teacher. When your instructor feels you are ready, get thee to an examiner and pass the appropriate written and practical test.

You can argue with categories, classes, and types if you wish, but the fundamental argument is a STUDENT becomes competent with an INSTRUCTOR and is tested on the competency by an EXAMINER before (s)he is allowed to use the privileges of the rating by themselves.

Where's the life-and-death need for that in amateur radio? The requirements
for citizens to gain access to public property must be rational and reasonable.

There's no life and death need for that, nor for twelve years of school, nor for recurrent training for a real estate or an insurance broker license, nor for a lot of the stuff that we do today.

It just makes a hell of a lot of sense to insure that people are competent in a field that has the potential for death (high voltage and such) and creating a public nuisance with a mis-tuned kilowatt before turning them loose to wreak their havoc.

Or do you not believe in education?

I do believe in education, particularly for people who use "insure" for "ensure".
I reckon the Bible was right about moats and specks.

I obtained virtually all my technical knowledge after I obtained all amateur
frequency/power privileges in 1952 at the ripe old age of 14. If the system
is broken now, it was broken way back in the early 50's. Because of my early
ignorance, the world gained an Electrical Engineer - not a bad outcome.

To really be meaningful, the info would have to be indexed against the
population's
ages. On average, Americans today are living longer and having fewer children.
That has definite effects on lots of things.
>
>> >I can honestly guess that the
>> >overwhelming majority of hams are in the 50-70 year old age bracket, and

>necessarily yours.

It is still pretty much the case around here. It is very much the case with the
hams I meet on CW. Having an FT-1000, big beams and all the trimmings
won't make you a good CW op. This may be what causes some folks to
hate the mode so much - the skills and accomplishments cannot be
bought, and cannot be gotten from a book.

>> --
>>
>> There are three basic reasons people become hams:
>>
>> 1) Technical interest in radio (building, experimenting, repair/restore,

>>
>> Most hams' interest is a mixture of these three, and the mix can vary over
>> time. But to
>> interest someone, or keep them interested, the mix must have things not
>> available elsewhere.

>Agreed.

Point is, if somebody isn't interested in "radio for its own sake", they
probably
won't want to be hams. If they are interested in radio as a means to an end,
rather than an end in itself, they will be hams only until another method of
meeting that end appears.

I remember when a bunch of ham spouses got licenses in order to do
the "honeydew" thing via the repeaters and autopatch. Nothing wrong with
that - almost all were good hams and some became more involved. But
when cellphones got cheaper than HTs, those who only used it for
"honeydew" were gone.

What does it matter what the names are? It could be:

top dog = extra
2nd banana = general
3rd banana = tech
etc.

> show I'm competent in the equipment.

Thing here is that if you try to fly something you're not competent in
handling, you'll crash possibly killing yourself, your passengers and
people on the ground. So it makes sense to be examined for every
kind of thing you can do in the air.

But in radio, if you don't do packet or RTTY correctly, noone dies.
As long as you know the rules and bandplans, the worst that
happens is some QRM. So no real need to be examined for
everything you can do *on* the air.

Well there you have it. And what is scathing about that? Jim thinks its an ambiguous term that can be thought of as something positive, even when uttered by the most negative amateur on RRAP. Cronyism.

Anyway, there you have it. Fair Larry has spoken. Others think the internet might have had something to do with most hams vacating the repeaters. Personally, I think there is something to your idea that there is, or was, a lot of "controversy" on the repeaters which has pretty much got both sides avoiding it. But of course, its not as one sided as Fair Larry portrays. Recall the incident of 2x2 Curt in St Louis blasting a new ham on his first QSO. Just amazing.

That and the internet.

73, Brian

If you set the base of the tower in a yard of asphalt rather than cement, it
might not be considered permanent. Concrete driveways are permanent,
asphalt are not.

No Dan, never did. I wasn't authorized those frequencies until recently.
But if you're tring to recall my callsign on 14.313, you must have at least
done some listening there - probably on CW - Ha! You might even know that
a maritime net was held on that frequency in the Pacific.

I did operate and listen to 28.313 for maritime check-ins and traffic while
on Guam. I would pass the reports to other hams who had access to 14.313
maritime net. Lotsa fun.

It appears to be a vicious circle. They say the same about you.

> They want an easy way into the ARS,
> with full privileges granted for drastically reduced effort made in the
> licensing
> process,

Larry, they're smarter than you. When told to do something irrelevent, they
ask, "why?" When they attain the knowledge to operate on this frequency,
and are told that another amateur authorization a mere 1khz lower in
frequency is off-limits to them, they ask, "why?" You simply accepted it
and asked, "How high?"

The FCC made a grave mistake in allowing incentive licensing to get started,
let alone allowing it in this century.

and a demand that they be accepted as full-fledged hams in
> spite of having significantly less technical knowledge and operational
> skill in all areas of the hobby.

They are full fledged hams. The FCC says so. When they have the same
number of years experience in the service as you do, they will know at least

as much as you know. Thats just how it works.

> Their demands are based on liberal,
> New Age concepts of "inclusiveness" and "acceptance," while they

So what's Dudley Do-Right gonna do? He otta arrest the public servant that allowed a soldering gun to be registered in the first place.

At Dayton I signed the petition for a Buckeye's right to carry a concealed handgun. Dropped a couple of bucks in their jar, too. It appears that Uncle Bob doesn't like it, but the senate already has enough override votes that Bob won't veto it.

Is that why BLM is closing all of the access roads to public property? They want us to "save" the arctic wildlife refuge - the one that we'll never see, but their tax-dollar based grants make it their own private playground.

> for an Amateur Radio license?

I'm asking: What regulatory purposes are served
by requiring mathematics proficiency (at a stated
level) to be demonstrated by amateur radio operator
license applicants?

There really are legitimate answers to that question.
I can think of several having to do with calculating
frequencies, bandwidths, power levels - all valid
concerns about operating within the Rules and
Regulations - and all areas in which problems
have occurred in the past.

The bottom line is that the government's only concern
in granting a license in the Amateur Radio Service
should be that the licensees follow the published
rules and regulations - including the technical ones.
How that is done is a mere implementation detail.

ADD does not require total exemptions. ADD does call for certain
accomodations to be made in testing.

The point was in making a practical test a requirement (i.e. soldering
a connector). I see no reason to make that a general requirement
in the first place, but simply identified that IF it were a requirement
there are people that are excellent hams today who wouldn't be able
to pass that test. How does a blind person learn to solder anything,
much less a connector...yet there are many blind hams who are great
hams and a credit to the entire ham community.

For HOA rules to be implemented assumes there is an HOA
setup as part of the development (i.e. subdividion) and that it
is valid as part of the deeded proocess. A neighborhood could
jointly agree to create an HOA and setup rules, BUT that could
only be for those that agree to go along.

>turned the case over to the Royal Canadian Mounted Police."

Cecil:

Interesting. Obviously, Canadians have no right to Keep And Bear
Arms, and, consequently, also don't have any right to protest against
their government. Otherwise, whichever bureaucrat processed the
request to register the Weller as a firearm would simply have rejected
the application on the basis that it wasn't, in fact, a firearm. It would
be interesting to see how the RCMP handles the case.

Any government who would make trouble for a citizen over something
like this is only proving what a good idea our Second Amendment
really is.

>
>That's not why you weren't a pilot.

Brian:

If my 20/400 eyesight didn't disqualify me for a career as a military pilot, and a subsequent career as an airline pilot, could you please tell me why not -- and how not? Keep in mind, when I took my acceptance physical for the Air Force Academy, they rejected me for the entire program based on my eyesight, since they were seeking strictly pilot/navigator qualified personnel at the time! Four years later when trying to enlist, I was reject for a job as an SP or LE due to my eyesight. Went in under open Admin and finally took the Air Transportation career field. Sooo -- if my eyesight wasn't the reason for me not being a pilot, please, praytell what was?

Keep in mind, I know full well I could have become a private pilot at my own expense, and took flying lessons right up to soloing, but never had an instrument or commercial rating. I just couldn't afford to fly on my own resources as a hobby. So, again, tell me why I never had a career as a pilot.

>> like, but the truth remains the truth.

Ham radio doesn't appeal to everyone. Ham radio is a cult. To be in this cult you have to follow Ham conventions and Ham traditions, otherwise you are not a true Ham.

You must use code words in your normal conversation so a non-Ham cannot figure out what you mean. Drop all those code words from Ham radio. Do you have to use all those code words to be a true Ham?

Hams and ham radio tend to be boring. There are Ham picnics, visits to radio museums. How about hiking, camping, Ham cruises? Ham radio cannot attract new members because it is not interesting to people. The non-Ham public associates Hams with strange, code word using, cult-like people. Then, when they attend Ham Radio meetings to learn about Ham radio, how is their opinion changed?

> Haming could be a wonderful hobby. Instead it is nothing more than a
> bunch of small minds with low self esteem hoping to invoke their
> warped
> thoughts on others.

Ham radio could be a fun hobby with activities such as radio direction finding, but most Hams are not interested in that. How about radar detection? Hams do not usually want to do group activities, or use radio skills. The people that do, keep it to themselves and do not involve others.

Some people want to do exciting things with radio that do not fit into the Ham radio aspects or Ham radio culture. I am a radio amateur but do not consider myself a "Ham". Clubs that are called Amateur Radio should not be called Amateur Radio clubs, they should be called HAM RADIO club. There should be other, non-Ham Amateur radio clubs.

A typical Ham wants to operate a radio, not experiment with the radio. Hams are not technical. Contesting is one example of this. The goal is to contact as many people you can in a certain time. Awards, such as "Worked All States" (for contacting people in every state) are given. Its all about the contacts. That’s what Ham radio is all about. That’s not necessarily bad, it just doesn't appeal to everyone. The award is for contacting at least one person in every US state. There are various awards for band activity and contesting (number of contacts in a given time). Logging in your contacts can get pretty tedious. Pretty boring when you think about it.

Ham radio does not require a lot of knowledge. Basically, anyone can buy a radio, set it up, and start communicating. There does not need to be a test for that. It only requires the ability to follow directions for the radio that you buy. I bought a wooden cabinet. It did not come pre-assembled. I put it together and now I use the cabinet. They do not make you get furniture certification for you to buy cabinets. Why should they make you get a license for putting together an antenna for a radio? These days, with commercial products, all you have to do is follow directions. The knowledge required is greatly exaggerated.

You do not need three license classes at all. Even the lowest class doesn't need all the knowledge that they test for. You can have no knowledge at all and pass the test after a one day cram session (where they give you the questions and the answers- a question pool). It is easy to pass the test since you know what the answers are.

Also, when a question pool is used for the testing, people see it as insincere. Now meaningless criteria are used for all sorts of justifications. If is this kind of flimsy associations that one would be outraged if a private corporation applied the same criteria. Here, its harmless, but it means that getting that license is meaningless and hardly a source of pride.

Hams do have low self esteem. They show excess pride in their Ham hobby. Many change their automobile license plate to their call sign as their license plate! They will take a day off from work to go to a ham fest (Ham flea market) on Friday, when the same ham fest is on Saturday. Ham radio is all these people have.

> Want to try some SSTV? Take a look around 27.775....or maybe packet?

> isn't fun what it's supposed to be about? (And don't spew that crap
> about "hams" and "public service"..... you are all useless as far as
> that goes and you and I both know it).

Yes, fun is what its all about. Something those contesting, codeword using Hams tend to forget.

Forget about public service. There are enough paid people in place to do those jobs. Public service is greatly exaggerated. Self justification is understandable, even admirable.

If Ham radio is to survive, Hams should advocate the freedoms that Ham radio allow. This can be a source of great pride which anyone can understand and relate to.

I'll tell you how they do it -- by cajoling sighted hams into
doing it for them! Those guys have some special "people"
skills that match anything any "practical" test could come
up with. (Typed as I am putting a completely overhauled D-104
microphone back together for one of our sightless brethern
-- and it was only supposed to be a simple matter of changing
the plug from Yaesu to Kenwood).

I have found that the biggest problem is awareness at all, most people that I have tried to "sell" or promote the hobby to weren't even aware of the capabilities of ham radio. Then there are a few that think it is CB, and some that think we are the next cast members of the next Revenge of the Nerds movie. (pocket protectors and all) This is pretty much the ordering of awareness as I have encountered it recently. I definitely will keep on trying to change the perceptions to positive ones though.

As it is so easy to lump everyone into categories Larry? What about the ones who just became aware of it recently, prior to their licensing. Did they wait for a lesser testing scheme on purpose if they were never aware of the hobby in the first place?

Okay... ya got me there, that is one emotion or inflection that can be clearly and quickly stated in word form. But there is other emotions that cannot easily be demonstrated in a text (or code) that can only be detected by listening to a voice. Now when I am referring to the voice comms, I am not referring to extreme emotions, just the day to day communications and what we percieve by what we hear.

Just another one of the 100+ weekend classes or training sessions that we as firefighters have available to us to improve our skills that are available through the year. Am already full-time employed.

Too bad that there is not something similar in Amateur radio. There could be various elements in the different facets of the hobby that we could take as a class that would help us to improve our skills. I mean going further in depth into the various subjects such as antennas, or radio circuitry or message handling or ????

I personally have some great strengths in certain subjects as they relate to amateur radio, and definitely some weaknesses I would like to improve upon. They say we must be a self-policing body, but what about a self-educating body? Talk about getting clubs more activity and participation.....

Just a thought,

Almost forgot this too.... Recently had some incredible bills and that has left the checking account at the lowest it has been at in almost 5 years. Unexpected repair on my truck and some other unplanned, and unexpected expenses kinda removed the amount in my checking account that I refer to as my "goof off" money. The money that is mine after the bills are all paid, and still have a little buffer before touching the goof off money. Guess that is why it is good to save for the proverbial rainy day.

Joe... PRB-1 has nothing for renters or leasee's. It assumes that hams are only residential home owners and that is about it.

True.... because the current names of the license levels means absolutely nothing. It shows no direction or ranking. Extra what anyways? The words Novice License seems pretty clear, Technician is misleading, General could go a couple of ways. Advanced makes sense if the General class was the starting point but I still think that some form of ranking in the licensure as far as the names of the different licenses go would be better. And of course, to help them further with the "big head complex" the Extra class would be referred to the most optimum that someone could achieve. I.E. 1st Class

My own take is that it is more a result of the build-out of the cellular telephone networks. That took a lot of the autopatch and "honey do" traffic away from the VHF/UHF repeaters, and with it the impetus to fix up the XYL and harmonics with Technician ham tickets. Then along came GMRS and FRS that directly competed with the ARS for the short-range, simplex, "caravan" traffic and the advantages of a licensed service for personal communications faded further. It has been argued that the ARS is not a personal communications service, but even the most casual monitoring of the ham bands shows this to be a significant component of the content of ARS communications, and not just on VHF/UHF either.

So, "there you have it".

HAW!!! Oh that's a GOOD one!! Almost up to the level of ol' Masa's promise of April 2, 1998.

A freestanding tower set in a cubic yard of asphalt won't be permanent, that's for sure. Not after the first warm day.

Of course it would probably never actually be erected in the first place. Township would never grant the building permit, for one thing. Asphalt truck wouldn't pour the stuff in the hole, either because they fear liability or because they were laughing too hard.

btw, one sets tower bases in concrete, not cement.

Better yet, have the restrcitions as part of the initial offering information,
like the price and number of bathrooms. Anybody who has an issue with
restrictions is going to want to know up-front that they exist, and what
they cover. However, the real estate folks sure won't like it. When folks
are confronted with a couple of pages of what they can't do, they may
see lots of walk-aways.

Exactly. This is one point that is often missed. Most hams are not looking to put up huge towers, they just want a wire or two and maybe a vertical or small VHF yagi.

You have hit on a big part of *why* the conduct is so gentlemanly while using CW. It is by nature terse, and all inference must be made from the text. (with that *HI* exception) It is how I can tell a friend in person that they are full if crap, and they will take it as a good mannered jest, and if I typed or tapped it out, they would not be pleased at all.

Changing the topic slightly, is there a rule of thumb for the amount of concrete in which to set the tower? Something like equal or greater mass compared to the tower?

No "rule of thumb" that I know. Depends on your soil (sandy, clay, rock), height of tower, free-standing vs. guyed or house-bracketed, prevailing wind conditions, subject to radial ice or not, etc, etc, etc.

In "normal" soil (at least 4000#/sf vertical and 400#/sf horizontal bearing capacity), you should be able to keep a 45' tower erect with 2 yards of good (5-bag strength) concrete. Serious towers (higher than 45 feet self supported) really ought to have an engineering consultation.

Ryan, all of the TITLES grew, became a part of the nomenclature over
the last half century. Many of the title-holders attach great personal
importance to those titles, rather well above the actual accomplishment.
That and TENURE (maintaining a license through regular renewals) are
substitutes for "professional equity" standing in the hobby. That is very
important emotional baggage for all those concerned and cannot be
mislaid without raising a Hue and Cry for the heads of the dastards
who dare defile those TITLES.

TITLES and STATUS (through tenure) are very important to some and
must be kept alive.

Never mind that most get totally lost when behind the front panel of
their radios...the titles and status proclaim them to be "extra special"
and thus able to look down on lowlier titles and claim superiority.

In one way such attitudes are serving their purpose. They reject
enough newcomers to keep their status intact by preserving their
hobby environment. Since they have a federal merit badge of a
license they can wave that around like a flag to prove their
alleged superiority over "lesser" licensees and be triumphant in
"accomplishments" over all who do not have such a license.

ONE license, no distinctive "classes" would be more attractive
to the hobby in general...but that is such a no-no that uttering
such heresy shows a "lack of proper spirit" (toward those with
title and status). :-)

What these supermen of ham radio need is MORE license
classes, MANY more or all gradations so as to preserve their
self-importance...of course, grandfathering their present title and
status to the top-most class of such a multiple-tiered class
structure. They "deserve it." :-)

The first question that I always ask an opposition witness is
swaigned to elicit his/her expertise or standing in the matter.
Then we know up front whether or not the individual is (forgive
the technical lawyer jargon) talking through a paper a**hole.

The two things that are guaranteed to light my rocket are
non-lawyers playing lawyer and non-engineers playing engineer....

My tower structural engineering consultant (and all of the textbooks
on the subject) tells me that it should be enough to keep both the center
of gravity and the center of rotation well below the ground
level. At least that's what I learned in my engineering school
tower design course in the stone age.....

He also tells me that the "rule of thumb" is to double the tower
manufacturer;s recommended dimensions "just to be on the safe side".

For mounting a tower in a yard of chocolate pudding, the above
advice is worth what one pays for it..... <ggg>

Rohn specifies such. For instance, for a self-supporting 25G tower
the "concrete required - 2.4 cu.yds."

Jim, good point. Even my wife and fambly are using FRS for caravanning and other outings. After exposure to some silly ham stuff in Illinois, she no longer wanted to get a license. Even though it was CW/Morse that intrigued her.

Lots of guys just bury their tower base in the soil. I've never heard you
comment on that.

What's your problem? Even on a warm day, my 12'x30'x3" driveway is stable
enough to park heavy equipment on without denting it.

Ryan, to their credit, the ARRL is offering web based classes in emergency comms, and antenna modelling (for $). More to follow. Meanwhile, FEMA offers a half dozen web or book based emergency response courses, all free of charge. Around Columbus OH I've heard a group on 147.45 simplex doing some building and emergency training. Find people like that and take it as far as it will go.

Note that 47CFR 1.4000(a)(1) now includes the phrase "ownership or
leasehold interest," and "lease provision." It was amended to include
that in late '99, IIRC. Of course, that's still only for broadcast
receive antennas, but we can target that one for our next campaign :)

(a)(1) Any restriction, including but not limited to any state or
local law or regulation, including zoning, land-use, or building
regulations, or any private covenant, contract provision, lease
provision, homeowners' association rule or similar restriction, on
property within the exclusive use or control of the antenna user where

the user has a direct or indirect ownership or leasehold interest in
the property that impairs the installation, maintenance, or use of:
(i) An antenna that is:
(A) Used to receive direct broadcast satellite service, including
direct-to-home satellite service, or to receive or transmit fixed
wireless signals via satellite, and
(B) One meter or less in diameter or is located in Alaska;
(ii) An antenna that is:
(A) Used to receive video programming services via multipoint
distribution services, including multichannel multipoint distribution
services, instructional television fixed services, and local
multipoint distribution services, or to receive or transmit fixed
wireless signals other than via satellite, and
(B) That is one meter or less in diameter or diagonal measurement;
(iii) An antenna that is used to receive television broadcast
signals; or

(iv) A mast supporting an antenna described in paragraphs (a)(1)(i), (a)(1)(ii), or (a)(1)(iii) of this section; is prohibited to the extent it so impairs, subject to paragraph (b) of this section.

True, but I think the point being made by was that if, as a renterm
the landlord prohibits antennas, then there is nothing in PRB-1
that is of any help to the renter.

Cheers,
Bill K2UNK

I understand the feeling, Jerry.

However, one's neighbors DO have a valid interest in how you use your property. And you have a valid interest in how they use theirs. That's the reason for building codes like the NEC (National Electrical Code) and zoning.

>Once I've paid for it, the idea of some blue-haired, busybody old lady
>telling me what I can erect, own, or keep in my driveway for as long
>as I shall live there just don't "git" it.

I call this the "Gladys Kravitz" problem.

>So strongly do I feel about it that, in order for someone to be able to do
>that, they must be able to get around on the backside of my 12 ga. shotgun
>before I can get off a round. Hehe!

The question is where Gladys' rights stop and yours begin.

>garage-workshop, and, again, nobody can tell me that I cannot have a
>100' tower (as long as I follow reasonable and prudent safety rules
>and city ordinances).

Yup. But you were lucky - such a house and neighbor hood existed where you wanted to live, AND such a house was for sale when you wanted to buy, AND you could afford it. Many people aren't so lucky. For example, consider the family that gets transferred to another city. They have to find a neighborhood and a house within a short period of time, and often there are multiple important criteria to be met (distance to 2 or more jobs, schools, stores, transportation, etc.).

>At this point, there are no rules against antennas and towers in my
>town.

And that could change at any time. At the very least, if you want that 100 foot tower, you'll need a permit.

>I LOVE my real, red oak floors, knotty pine kitchen--and, of course,
>my radio shack down in the basement--cool in summer and cozy in
>winter with the wood stove a-simmerin'.

I know what ya mean - I've had three houses of my own, all with nice cozy basements, hardwood floors and lotsa real wood. But the newest house I've owned is this one, built in 1950.

Most of all, I was lucky to grow up in a place without such restrictions. Many if not most of today's kids aren't. How many parents do you think would pack up and move so their 13 year old son could have a wire out the attic window to the crabapple tree?

Ham radio needs this bill, and more, to insure that we have reasonable use of our homes. The bill isn't a final answer by any means, but it is a step in the right direction. Every amateur needs to write his/her congressperson to get behind this bill.

> Many of the title-holders attach great personal
>importance to those titles, rather well above the actual accomplishment.

I'd suggest one review my comments to the FCC in response to the proposed restructing NPRM.

As a matter of fact, almost everyone here, including most of the Extra's, suggested some re-naming of the licenses to "lettered" groups instead of names.

>That is very
>important emotional baggage for all those concerned and cannot be
>mislaid without raising a Hue and Cry for the heads of the dastards
>who dare defile those TITLES.

As I said...Go back and read the various comments to the FCC...

>TITLES and STATUS (through tenure) are very important to some and
>must be kept alive.

Just as a good lie and rant are to those WITHOUT one...Such as yourself, for example.

>What these supermen of ham radio need is MORE license
>classes, MANY more or all gradations so as to preserve their
>self-importance...of course, grandfathering their present title and
>status to the top-most class of such a multiple-tiered class
>structure. They "deserve it."

Actually, the only one from this forum that I recall suggesting MORE license classes was Bob Wexlebaum, W2ILP. I personally suggested four classes, "lettered" from D to A, and a reduction of the highest code test from 20wpm to 12.

As for the titles, those were carried forward by the FCC, not us...put "blame" where blame is due, Your Putziness.

Can anyone think of a way to legally or politically find out the actual location of a repeater if there is suspected legal issues on part of the operator? I know that the exact location is not regulated by the FCC, but there should be some oversight? In this case, one operator would be guilty of using two or three repeaters in an illegal fashion, but the repeater trustee would be a different individual and unaware of the violations and infractions.

There are repeater coordination groups in every part of the country.
Determine who the local coordination group is and contact them. They will
know the exact location if the repeater is coordinated. If it is not
coordinated, they are probably well aware of it and will also know the
location.

Much of this is kind of academic, as nobody really 'owns' their property. Oh, sure, you get a nice piece of paper that says you own it, all registered at the local government clerks office, but in reality you are leasing it from the government. You have an indefinite term lease that the government can break under certain conditions. Those conditions are certainly better than you would get from ANY other landlord, but it is a lease nonetheless. This can be shown by the fact that you can be removed from "your" property for not paying your rent to the local government in the form of property taxes. You can also be removed under certain other admittedly rare conditions, but in most of them you have to be compensated by the government.

As far as CC+R's are concerned, IMHO if they are not revealed to the buyer before the close then they should be considered invalid. The reasoning being that you might not have purchased (leased from the government?) the property had you known about the restrictions. An ideal situation might be something like truth-in-lending and truth-in-advertising laws. Require full disclosure.

Four years ago my XYL and I purchased a house built to our specifications. We specifically chose to NOT buy a house in a development because of CC&Rs (well, I was the driving force behind THAT decision). I knew I would want to put up an antenna or two, and I didn't want to have any problems. So I have my G5RV up in the backyard, and I am going to mount a j-pole and either a horizontal turnstile or a halo for 2 meters in a month or so. And I don't have to worry about some wannabe petty dictator(s) telling me I can't.

I think we ought to have degrees, not classes,
ranging from 1st degree all the way up to 33rd
degree.

And have funny little hats with arcane ham
radio symbols on them to wear at hamfests.

Oh, wait, we have those already.

> So does the fact that they sway in the wind.

All true.

Trees are the result of billions of years of evolution, in part to derive a structure that will not fall over. Their root structure is often a very large percentage of the total tree mass. Yet many of them do fall over or break in the wind.

No structure is exempt from Fudd's First Law of Opposition.

In article <20020521000105.06702.00001235@mb-mr.aol.com>, somebody writes:

>> Many of the title-holders attach great personal
>>importance to those titles, rather well above the actual accomplishment.
>
> I'd suggest one review my comments to the FCC in response to the
>proposed restructing NPRM.

I would suggest that a God of Ham Radio should publicize such
comments in here for all to admire and revere, to worship as gifts
from the all-seeing and all-knowing to lowly mortals.

At least one other God of Radio submits those on a semi-regular
basis. :-)

> As a matter of fact, almost everyone here, including most of the Extra's,
>suggested some re-naming of the licenses to "lettered" groups instead of
>names.

Noooooo they did NOT. Some, not even close to "everyone here."

One memorable post of about four years ago had well over 30
different classes/grades/varieties of rank-status-title-privileges
to those who "deserved it."

>>That is very
>>important emotional baggage for all those concerned and cannot be
>>mislaid without raising a Hue and Cry for the heads of the dastards
>>who dare defile those TITLES.
>
> As I said...Go back and read the various comments to the FCC...

Go back and read the comments and LAW from the FCC.

>>TITLES and STATUS (through tenure) are very important to some and
>>must be kept alive.
>
> Just as a good lie and rant are to those WITHOUT one...Such as yourself,
>for example.

Now, now, getting testy are you? :-)

Does Sig have the curse now and you filling in for him?

Can't understand your own "CV" comments in here and the
applicability to titles and status?!? Tsk, tsk.

>>What these supermen of ham radio need is MORE license
>>classes, MANY more or all gradations so as to preserve their
>>self-importance...of course, grandfathering their present title and
>>status to the top-most class of such a multiple-tiered class
>>structure. They "deserve it."
>

>license classes was Bob Wexlebaum, W2ILP. I personally suggested four
>classes, "lettered" from D to A, and a reduction of the highest code test from
>20wpm to 12.

Does anyone really care what you've written in here once in a while
in between all those personal insults directed at those who do not
agree with you?

> As for the titles, those were carried forward by the FCC, not us...put
>"blame" where blame is due, Your Putziness.

See, another "putz-gram" sent off. Prediction of behavior is no
problem at all. :-)

The FCC originally had three lettered license grades/distinctions.

The ARRL lobbied for, and got all those fancy TITLES. That was back
in the days when Big Brother did all the talking "for amateur radio."

ONE license is all that is needed for regulatory purposes.

Anything more is nothing but government welfare support for
sanctified self-importance of the already-licensed.

Wow, multiple classes. A real crowd-pleaser for "incentive" to join
amateur radio and "promoting interest" in a hobby. Cat-fighting by
radio..."my license is bigger-better than yours"...
:-)

Granted - that's why we're going around on this Merry-Go-Round with
The Congress.

My reaction was to the statement "It assumes that hams are only
residential home owners and that is about it".

PRB-1 doesn't assume anything of the sort - it just plays "chicken" by
refusing to deal with private restrictions (per the famous footnote).

Then again PRB-1 was written in the mid-80s when the Commish' was well
afflicted with the "chicken" syndrome.

IIRC utility poles require a minimum of 20% of their length buried
in most soils. It just depends on keeping the center of rotation
below ground level.

Having an "extra" license is just a line item on my resume. Below the
13 utility patents issued and another pending, and the BSEE from
Syracuse. Now that I'm done bragging :-), the "extra" license is roughly
equal to say a 6 credit college course. Yes, it's an achievement, but
not the ultimate achievement.

BTW, if you ever apply for a patent, be sure to ask for a "utility patent",
NOT a "design patent". A design patent is little more than a document
describing the styling of a radio cabinet, for example. The patent for
say the light bulb or the transistor is a utility patent, and actually means
something in the industry.

I agree...when I first got on the air in 1961 the 160m band was nearly useless with all the LORAN trash and the FCC mandated power restrictions of 25 and 50 watts.

Now it is basically wide open and full of amateur stations running decent equipment and having good signals.

Heck the Amateur gear of the day didn't even bother with putting 160 on it. Remember the Heathkit SB series?

The FCC relies on asking the trustee if any questions they have come up.
Besides, are you sure that there are violations? Ask privately the
coordination committee that serves your area if there are any
violations or poor practices being done. Maybe someone at the
ARRL might know the general principals and express a casual
opinion. Do your research before going public, so you won't look
the fool if the situation is in fact legal and proper. If you think
after research that there still is a problem, contact the trustee
privately and tell him that "I think there may be a rules violation
with your repeater".

But if it's just a minor infraction that is not causing any real
harm, don't worry about it.

What you really don't want to do is announce it in the
middle of a ham club meeting or similar public forum.

Bob,

This guy is a fruitcake (perhaps a dangerous fruitcake) who believes that someone has implanted a neural monitoring device into his body and is carrying out communications with that device over K6BWA repeaters.

Do a google-search on "LARS121" and you will find all sorts of whacko gems, like the one below from ALT.MINDCONTROL!

Greg, thanks for the funny. I think the voltage torture test should be
combined with the 30wpm exam. A real live telegraph key could be the on-off
switch. Now where to hook up the aligator clips?

Robert, from a search of the USPO, how can I determine if a patent has
expired? How can I determine if someone has "added" to a patent?

Private e-mail is good.

Brian

Best of luck.

3887. "Greenstamps" to Cuba?

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-21 23:06:36 UTC
From: Dan Finn <djfinn2@bellsouth.net>
Message-ID: <3CEAD2FC.7020604@bellsouth.net>
Source record: 43206

While talking to some of the "CO's" in Cuba (40m CW) on Sunday morning, I noticed that some of them wanted US hams to QSL them directly instead of via their local clubs. They also clearly were asking fir greenstamps, i.e. dollars so that they could pay for the Cuban postage to send us their QSL cards. I wouldn't send them one 'red' cent, but:

1. Would this be in violation of the Trading with the Enemy Act (Trade Embargo)?

2. Does the FCC Part 97 permit ongoing CW communications between US stations and Cuba?

Some of these QSO's have been very interesting, especially when the commie 'radio club operators' come in and try to stop them from asking for money sent directly to them (in Spanish, of course). As an advanced class operator, I do not remember any test question that dealt directly with this question. Advice would be appreciated.

The Geneva Treaties allow a country to object to communication with its amateurs and that becomes binding on the radio authorities in all member nations. When I got into the hobby back when dinosaurs roamed there were some, Laos, Cambodia, perhaps North Korea who did object. I do not recall any bilateral freezes. So far as I know, communication with Cuba is perfectly legal and always has been.

What our current viewpoint on this sort of activity is these days I know not and care less. I strongly doubt it consitutes trading with the enemy, enema maybe but not enemy.

You are witnessing a pretty standard deal in any number of authoritarian countries over the years, fighting over who gets to strip the mail of bills and IRCs. Anyone remember the infamous PO Box 88 Moscow?? Some clubs got their addresses into the International CallBook so they could get in on the loot. The IRCs required would have shipped the office safe let alone a QSL so the Post Office got in on the looting as well.

Watching our idiot Pres take up where the senile Jesse Helms left off for purely partisan gain is simply gut-rumbling. There is a time to take a stand for de minimus and that was 20 years ago. We are imitating the

Fastest Gun in the West -- No Toes Ike.

>the form of property taxes.

Hello Bill,

When I first read this, I was inclined to say you had it all wrong. But after some thought, I realize that you have really summed up the situation very accurately, not just for real estate but for all property. If a person doesn't pay their taxes, their property can be seized by the govt., plain and simple.

>You can also be removed under certain other
>admittedly rare conditions, but in most of them you have to be compensated
>by the government.

Eminent domain. And you cannot say that you'd rather have the land than the money.

There are also easement requirements, like the utilities having their pole line on "your" property without paying you any rent - even if you are not hooked up to those utilities.
>
>As far as CC+R's are concerned, IMHO if they are not revealed to the buyer

>Require full disclosure.

I am 100% for that!

The trick with such nullification laws is that they would put the govt. in the position of widespread nullification of private contracts.

The rules would also need some specifics as to when the restrictions are made known to the buyer. Handing a buyer four pages of fine print restrictions at the closing is not adequate.

>telling me I can't.
>
Good for you! But not everyone has that option. In many areas there is simply
no
undeveloped/unrestricted land available. Many people simply cannot afford the
time and money to have a place built from scratch. And most people aren't
going
to up and move because a family member develops an interest in ham radio.

It is also interesting to note that in order to have a simple wire antenna and
a
VHF vertical, you had to have a house built. that alone says something about
the
need for this bill.

It's taught as the 'bundle of sticks' theory. You have a lot of them, you
do not have all of them.
Covenants are simply a few more sticks you don't get.

Actually not all that uncommon a situation. The biggies on this that I recall are the Gold Clauses in bonds that were fought over when the US went off gold in 1934 and the voiding of racial covenants. Nullifying private contracts does not seem to cause a bankruptcy judge the loss of a lot of sleep.

That would make sense if you sold the rights to put up antennas, not park a
boat in your driveway, etc. Then someone else own those rights. They could
park their boat in your driveway. But in this case, you don't get any

money, and the property rights are lost forever.

Lose, lose situation.

IMHO, to the uninitiated, I'd suggest
that upon hearing the names of the licenses, the
typical non-ham would probably think the
Advanced was higher than Extra.

Seems logical too that if I have a 50 foot tower and apply the 20%
minimum, I could bury the first 10 feet and still have a 40' mast.
Given the open framework of typical masts, the wind load
of the mast and antenna is probably less than the typical utility
pole.

Cheers,

Ryan:

That's the problem when standards are lowered. Those who came
in after the fact can never attain the status and prestige of those who
met more comprehensive and challenging license testing requirements.
They can insist until the end that they are equal to the Pre-Restructuring
hams, but it will never be the case, and they will always occupy a low
place on the pecking order among their superiors. Sad, but true.

Brian:

If it was CW/Morse that intrigued your XYL, why didn't she simply ignore the "silly stuff" on phone and pursue ham radio on her own terms? Do others have as much total, overruling control over her life as they seem to over yours? Or, is she, like yourself, an obsequious minion who allows the actions of others to deflect her from the path she would prefer to take? Or did you discourage her from learning the Morse code and becoming a ham, because she would then go on to be an active CW user, and thus be a better ham than yourself?

Reminds me of a birthday present I got from my shift workers during my first tour in Germany. I was the Swing Shift Supervisor of Passenger Service at Rhein-Main Air Base. They gave me a baseball hat with an extra long visor, and the hat was embroidered: To SSgt. Roll, Our SUPER-visor! The visor was signed by everyone the shift. A very touching gift. If only I knew where they all are today...

Union Electric treats the pole with creosote to ward off bugs.
The equivalent for steel, galvanizing, wouldn't last very long
in dirt.. Anyone who would bury 20% of a steel tower is an idiot
when the cost of a properly designed and poured concrete base is
far less than the cost of a section of tower.

And what building official would issue a permit for a steel tower
buried in dirt? All the steel utility towers in the industry
that I have ever seen in several countries are on concrete footings
or pads for a reason.

Ed:

There's only one slight problem with your theory: I wasn't the one who made the quote including the inaccurate abbreviation "mHz." The person who did so knows who he is, and is just sitting back and letting me take the heat for it.

BTW: If I ever see the abbreviation "mHz," or "mhz," I usually assume that the writer means "MegaHertz," or one million CPS. The term "milli-Hertz" simply isn't used in the electronics field, at least not in my experience.

summer >days...

Apples and oranges.

An 80,000 pound truck spreads that weight over 18 wheels, so each wheel only supports about 4500 pounds. Those 4500 pounds are spread out over the area where the tire contacts the road surface - maybe a square foot per tire. 4500 pounds on one square foot equals about 30 pounds per square inch. That's not a lot of pressure. Yet 18 wheelers do tear up the road. The road actually flexes very slightly under the passing wheels. And on a road surface, the forces
are almost all downward.

A foundation for a freestanding tower is a completely different animal.

Check out how traffic light and roadsign masts are installed. Those are the closest
thing to antenna towers.

Extensive root system. In some species there is almost as much below
ground as above. Yet trees fall over in the wind.

>> Bury it deep enough at the base
>>and it can support a considerable amount of height.

Only if a lot of conditions are met. You CAN have a tower foundation without
concrete, but it's usually not cost effective.
>
> IIRC utility poles require a minimum of 20% of their length buried
> in most soils.

I can speak to this, having installed them with and without power equipment.

20% is an absolute minimum. This means a pole 35 feet long has at least 7 feet
buried and 28 feet exposed. Taller poles and softer soils need additional depth
and guys. Any side loading must be compensated for by proper guying.

A wood pole offers a large solid surface when buried. A lattice tower does not.

Wood poles taper, and the thicker, heavier end is installed downward. End
result is that a wood pole, properly engineered and installed, will not fall
over in
most winds.

> It just depends on keeping the center of rotation
> below ground level.

Yup. Proper engineering, that's all.

It's a matter of force and leverage. The truck has it's weight
distributed among all the tires. Each one applies only so much force.

The tower on the other hand, is applying all its force in one small
area, the area of the tower cross section, or near to it. It's the same
principle where a cat or small dog can hurt when it stands on you, even
tho' it only weighs ten pounds. All the weight is concentrated in one
place.

To make things worse, the tower also acts as a lever, with the pivot
point at almost the very end. So there is a startling amount of force
involved here.

I haven't tried it (not looking to install a tower), but couldn't
you just download engineering drawings from tower venders?
It would be a generic design that would be good for all
kinds of soil, i.e., overdesigned. Then take it down to
the town hall and get the permits. Yes, inspections are
a pain in the ass, but if you did do it wrong, it could be
dangerous.

I used "mhz." What heat are you taking? You said you wanted to get rid of
VHF+ freqs, and if you get any heat for that its only because you should get
heat for it.

Spoke with Eduardo Hernandez, Sr. this past weekend. He was quite surprised to learn he is the subject of a hate vendetta by a West Virginia ham operator. Eventually, we both realized it can't be him that the West Va. operator detests so much. It has to be Eduardo Hernandez the third, who lives in Michigan. Ed Hernandez III, no relation to Eduardo Hernandez, Sr., is a traveling minstrel who has been know to perform in West Virginia, and that apparently is the connection to the West Va. amateur who posts all the filthy obscene language in this news group. Ed Hernandez III also administers ham radio exams on an itinerant basis and has been known to do same in West Va. If that wasn't confusing enough, it was later learned that an Eduardo Hernandez, Jr. is computer consultant living in Florida and is in fact possibly related to Ed Hernandez, Sr. who lives in Texas. Both the Hernandez's are anxious to get this problem cleared up and to get the West Va. ham op to stop making up stories about the Hernandez's.

Hans,

Perhaps you should save the juvenile name-calling for another group. I'm sure that you are an experienced ham, and I respect this, but your comments show that you can also be quite a childish snot. I can only hope you don't display such behavior in the presence of your wife and grandchildren. I am truly grateful for the information and insight that this group has shared with me because my knowledge of ham policy is still minimal. In contrast however, my knowledge of Biomedical Engineering and Physiology is considerable. If there is something that you don't understand regarding BME, I would be happy to provide you with the neccessary factual data or information. The whole point for a newsgroup is dispersal and sharing of views and information, so it seems ignorant to rant and accuse, escpecially when you know nothing of which you speak. If you want out of the dark, just ask.....

Lars

Status and prestige are not objective characteristics of amateur radio
licenses. ARS licenses are only as good as the privileges granted.
Everything else is all in your mind.

I was referring to the local level, possibly having a regional arrangement within the states to do this. At least if we are talking about the ARRL, this is a way we can actually get some activity out of the section titleholders.

As far as online teaching, I am not sold of that method, other that utilizing it for taking tests online. Thought the idea might also be good in respect to hams actually seeing other hams face to face once in a great while.

I will be the first to admit that there is some great strengths and abilities I have within the hobby, and there are some weaknesses I would like to improve upon.

Don't believe that would be as necessary to improve the skills for the general and below classes. But some key elements of the different facets of ham radio would be good.

These are good, but I am looking for someone in regards to this to actually teach something like that. Self study courses may not always be a good solution, as you may not learn the material properly, but a qualified (having knowledge in the subject) person can identify gaps or errors in

knowledge in a class form. God forbid we actually see other hams face to face.

This guy still won't allow one of those even..... Don't think he will
believe it even if I showed him the law.

Guess the only solution is for me to move, but it is all I can afford at
this time until things get better financially. Playing catch up on student
loans and other debts takes a huge amount of my funds. Life's gonna suck
for the next 3 years or so, but after that it will get better.... I hope.

(opinion mode on)
I have seen some hams at hamfests with more crap on them, such as stupid tags and buttons etc. IMHO I think all that is necessary is a simple ID badge (clear laminate kind with alligator type clip) with pertinent information is more than adequate. Some of these people look like complete fools when they go out in public like that. Almost think I saw the same type of people at a Star Trek convention I had to work security for about 10 years ago. Talk about an image issue.

Never gonna see me at a ham radio related event with nothing but normal street clothes and a simple ID badge like described above or (if) one of the ARRL type of ID badges. Thats it.

(opinion mode off)

>Extra's,
>>suggested some re-naming of the licenses to "lettered" groups instead of
>>names.
>
>Noooooo they did NOT. Some, not even close to "everyone here."

Most of the Extra Class respondents from this forum DID suggest that very
change. Sorry.

>One memorable post of about four years ago had well over 30
>different classes/grades/varieties of rank-status-title-privileges
>to those who "deserved it."

I DID cite that one person made such a foolish suggestion, but I guess you
just glossed over that in your rush to once again assert your dwindiling
manhood.

It didn't work. The truth is still the truth.

>>Just as a good lie and rant are to those WITHOUT one...Such as
>yourself,
>>for example.
>
>Now, now, getting testy are you?

Nope. Just still can't help but wonder how decrepit and lonely you must
be to sit in front of your pooter for hours drafting such dribble that does
nbothing more than make a fool out of yourself.

>Does anyone really care what you've written in here once in a while
>in between all those personal insults directed at those who do not
>agree with you?

Matters not to me, Lennie. I am just having fun poking so many holes in
your lies and rants that the rest doesn't matter. All that night school down
the drain, eh Your Putziness?

The last thing that came out of this NG of any note was a letter that Hans
had printed in QST and an article that appeared in "Worldradio" with my byline.

And I limit that to "this NG". I wish in NO WAY to demean or detract from
the excellent efforts of several gentlemen (ie: W1RFI) who are published on a

regular basis.

>>As for the titles, those were carried forward by the FCC, not us...put
>>"blame" where blame is due, Your Putziness.
>
>See, another "putz-gram" sent off. Prediction of behavior is no
>problem at all.

Just as knowing that anything authored by "lenover21" will be a stinging slap at 675,000 LICENSED Amateur Radio operators, Lennie.

And besides, "licensed operator" is my "title", "Putz" is yours. The only thing you and I have in common is that we each earned our respective "titles".

Congratulations on yours, Putz.

>The ARRL lobbied for, and got all those fancy TITLES. That was back
>in the days when Big Brother did all the talking "for amateur radio."

And the FCC kept them this time despite several opportunitites and encouragement by scores of respondnents.

>ONE license is all that is needed for regulatory purposes.

"...in my opinion" should have been the rest of that sentence, Lennie.

>Anything more is nothing but government welfare support for
>sanctified self-importance of the already-licensed.

Again..."in (your) opinion."

>Cat-fighting by
>radio..."my license is bigger-better than yours".

And in YOUR case, Lennie....a NOVICE license is bigger than yours.

Ed, I agree with you totally and over the years have lived thru the break-up of the old sequential call-sign structure where we marched in lock-step into the sunset. It was an enema the hobby really needed.

Yet I still have the feeling the class system lives not so much among the uberfuerers as among the newbies. It is their really silly attacks on Larry that have fueled this sort of thing for years and handed him the keys to a career of endless amusement. There are few things as pathetic as an incompetant iconoclast.

I got to take the inevitable 'stately home tour' with a collection of British Baptists who are not all that high on the economic totem pole. The whole thing was a ritual: the owner-lady came down in the proper uniform, Papagallos and all, to pronounce on the unworthy bodies of the babushki who properly and eagerly served their part in the opera. Sometimes this code thing resembles an opera, of recent times complete with fat lady, where everyone has their parts memorized and sings them on cue.

It is blessed hard to be among the elite when the flunkies ignore you. Ever get the feeling it is more the flunkies playing the game than vice-versa??

That's definitely a first step.

> It would be a generic design that would be good for all
> kinds of soil, i.e., overdesigned.

One can't assume that a particular design is suitable for all soils.
Part of the engineering process is determining if the suggested
manufacturer drawings can be used for a particular application.

> Then take it down to
> the town hall and get the permits.

Yup - with supporting documentation to show it does apply to the
proposed application. If every thing is in order, the cost of
having a licensed PE look it over and sign off on it is usually
nominal.

> Yes, inspections are
> a pain in the ass, but if you did do it wrong, it could be
> dangerous.

That's the main point. Building and safety codes are written in
blood, usually by people with more experience.

Also, it's often easier and cheaper to do it right the first time
rather than have to deal with problems later on.

Then, when you analyze the background of said flunkies and draw conclusions
as to the origins of their behavior, the problem clarifies to a solution.

Their behavior is not of recent origin, in the case of the "old newbies", and the real new ones just follow their lead.

In the Brave New World where anything older than yesterday is 'legacy' and thus unworthy of anything but discard, yesterday's accomplishment, whatever it was or whatever it meant yesterday, is flushed with prejudice. The future will surely take care of itself.

Amateur Radio would benefit either way if he develops his personal skill to decode CW or if he were to develop a decoding algorithm that is more capable of adjusting to the variations from ideal that are characteristic of manually-sent Morse encoding.

The latter would actually have more potential value because it might have applicablity to software decoding of other digital modes subject to changes in propagation delay over ionospheric paths.

Passing a minimum requirements exam and then resting on one's laurels
does not elicit respect, Dick. Yesterday's accomplishments are old news.
What have you done for the ARS lately?

What has tenure-in-a-hobby got to do with it?

49 years ago in February I keyed on my first HF transmitter, quite
legally without any license whatsoever. So did N2JTV at roughly
the same time. We were both at the same station, but on
different shifts.

Ignoring the political boilerplate phrases, amateur radio is really
a HOBBY. It's been that way for over a half century.

Transmitting RF requires regulation. A "ticket" (license) is just a
regulatory tool of the government agency required to regulate
civil radio use. Approach it that way instead of the nostalgia gig
that old-timers get into and there can be some meaningful
discussion of "what should ham licenses test."

So far under this subject header, the "discussions" are based on
little but individuals trying to promote their own experiences as a
"basis" for continuing test regulations. That's just self-serving
nonsense insofar as the uncountable thousands who MIGHT be
interested in amateur radio and MIGHT be interested enough to
get a license.

>Private e-mail is good.

Try www.delphion.com (the old "IBM" patent site). You can't get the
whole patent there without money, but you can view some of the
history and search information.

For example, Brian Kelly and his co-inventor have three patent
numbers for the same thing but successive date patents are
"replacements" for previous ones. That means he and co-buddy
have only ONE patent. It's a "mechanical" thingy about
bearings. [watch him "argue" that one...:-)]

The reason that a partially buried tower would "work" is that it acts
like a lever as far as the forces it places on the ground. If the pivot
point (ground level) is at a point where the forces applied cannot move
the earth in which the thing is buried, the tower won't move.

Such a tower will become weak pretty quickly tho', as corrosion weakens
the metal to the point where the applied forces overcome the strength of
the metal. This causes the metal to break at some point, and it shortens
the lever, then the forces can eventually move the earthe in which it is planted.

Now try sticking a hunk of pipe in it. Then move the pipe from side to
side. This is what will eventually happen to your antenna. Asphalt never
ever gets hard as concrete. It is a material of convenience which can
simply be heated and formed into a road while still warm and plastic.
But it's desirable quality for indicated uses is temperature dependent plasticity.

Yeah, maybe they ought to pile up on each other like:

Technician
General Technician
Advanced General Technician
Extra Advanced General Technician

But then we'd all be Tech's, wouldn't we? And the
dogs of egalitarian socialism would have been loosed.

If you're doing an AC circuit analysis with the SPICE
program and tell it to do a frequency sweep from 1.0mhz
to 500mhz, you'll get an ultra-low-frequency razzberry
just like Brian did. Been there, done that, felt like
an idiot-savant. (But that's another thread off this one).

One does not get a building permit as a matter of right, as one gets a dog license. Almost all building officials will not issue a permit on "generic" plans and specs. The applicant is lucky if the b/o will accept the manufacturer's calculations without certifcation by a professional engineer licensed in that state (so-called "wet stamp").

> manufacturer is going to pay to run an ad that
> most people won't see because
> they are going to fork out money to buy it!

Agreed. One of the Cardinal Rules of marketing is
never to let your potential customers know that they
are paying you a percentage of the advertising
budget! This is a faster turn off than paying retail.
People "like to" or "need to" think that they are paying
ONLY for the product they want to purchase. This makes
them think their getting a bargain deal, except for
big ticket items like Cars and Homes where it's a given..

Unfortunatly The Hamvention people seem to have not
lost their appetite for profits at any expense and
knowing how traditionally cheap ham radio op's are
this is not a good publicity move. (the only exception
being the cost of soda/pretzels/burgers which can be
priced as expensive as those at the dog racing track
and they'll still buy the greasy/carbohydrate packed
stuff)

Look at similar examples like Radio Shack charging
for their formerly free catalog (unless you buy something)
and the numerous sites on the Internet that used to carry
live streaming audio feeds for free, which have now dissappeared
or you are charged a listeners fee for. Radio Shack has
since resigned to giving catalogues away for
free again, if you wait around till March, and dot.coms
who charge pay-per-view/pay-per-listen are just about
all gone to byte-heaven, except of course for the
porno and bizzare sex video on demand websites ;)
[and most of this "pay-per-view" stuff you can now download from
www.kazaa.com for free! Kazaa is the new Napster folks - check it out!)

The general public is tight enough when it comes
to trying to get a dollar out from their wallet
for some things, but just try the same with white male
middle-aged ham radio op's?! You'd have better luck
trying to wrench a canned-ham bone from the
jaws of a junkyard dog. :) :) :)

I've been to the old Cincy-hamfest of years past, darn shame as
it was almost as big as the original Gaithersburg Md hamfest.
Same thing happened to the hamfest up in Hamburg NY when it used
to be held at the County fairgrounds. They moved it, now it's a
mere shell of it's former self last I heard. Many more have just
dissappeared without a trace.

> Even with the bad weather, flea market prices are too high and the fools

You can thank E-Bay for that JDB!
Without a doubt the world biggest
24-hour online sucker-hamfest.

Perhaps I'm wrong, but it seems to
me that more than a few of these "professional ham
equipment dealers" I see with E-Bay item sales
and feedback counts in the 100's - and a
few in the 1000's) seem to network
amongst themselves to drive up the base
auction prices on ham gear(??) A bit of
"shill-bidding" here and there...perhaps..??

Cute gimick, but Motorola or Cobra has had a pair
of waterproof "sport" FRS radios out for close to
a Year now for $59.95 in a hanging blister-pack
at WalMart last I looked.

I agree with you 100% on the re-packaging of gear.
I'm one to peek "under the hood" of new radio gear
myself. What's "behind" that graphics-filled LCD?

Yaesu does seem to be the leader in innovation and
I would put Alinco in as a close second. Kenwood and
Icom...?...booring! Just expensive bells and whistle
gadgets in cheap sheet steel boxes. Looking at the electronics
inside of your average Icom and kenwood reminds me of
the insides of a Korean VCR that you can get for $65.00
at Circuit City. (and they REALLY pay 2-3 grand for
some of this stuff...??!! rotflmao!)
Yaesu and Alinco are mostly newer design
SMT with clean layouts and by far a better
value - Alinco I feel has the best dollar per
radio value going.

Sad news on Ten-Tec. The Orion shoud be called the Onion.
Looks like it came off the prototype workbench in the
Engineering lab - with all the bugs still inside. (?)
Iam afraid Ten-Tec will be gone by this time next year.
They used to build great rigs in the late 70's and 80's.
Easy to work on with readily available replacement parts you
could get from Digi-key and Mouser electronics if
needs be. Now their overpricing themselves out of the
market. What Ten-Tec *needs* to do is return to their roots
and build rigs like the Triton and Omni-D series again.

Functional and utilitiarian radio gear that is easy
to operate, maintain, and has minimal gimicky bells
and whistles. Stop trying to mimic the Japs, dump all
this digital pushbutton crap, except for the freq
display, and put more single-function standard type
controls. The Omni-D (..of which I own 2 of) are a
great example. The Paragon was perhaps the best radio
to ever come out of Tenn.

> SGC used to have a good rig with the 2020, but I noticed they screwed that
> up and changed the fixed SO239 on the back of the rig to a pigtail.
> Another component to fail. Also they took away the power plug and now
have a
> pigtail for the power lead. Yikes, on an HF rig?

Agree again, not a good idea to put a mid-power level
RF connector or high current power receptacle on a
pigtail. Anchor female receptacles to the chassis
with bolts and do it the right way. (I hope they
never get the idea to put a spring-loaded cable
retractor/pull reel like what's the power cord of
the XLY's Electrolux vaccum cleaner...oy! I heard one
engineer from Cubic or Azden talking about that
for a DC cigarette adapter power cord many
years ago at Dayton and nearly got sick...)

> APRS is really growing in popularity and there was a really nice APRS

> Of course many of the ills can be cured with more hams.

I could not agree with you more strongly on the "trinket vendors"!
If I am going to PAY an admission fee to a flea market (which is
what Hamvention really is folks!) then I had better see stuff for
sale that I DO NOT SEE at the local every-weekend flea market
just down the road, where the admission and parking is free!!

Case in point, for years this one guy would show
up at all the Eastern hamfests selling new cheap
import luggage and gym bags. No ham stuff period.
Next year he was joined with some other guy selling clothing
and other crap in another section of the flea market.
Again no ham related items whatsoever for sale between them.
I've never been back to the hamfests that let these
turkeys into their flea market and I never will.

I could not make Dayton, and I really hope that
it is not turning into another consumer
products junk market dumping ground! It's bad
enough with all the computer related crap.
All that needs to happen is for somebody in an
overloaded mini-van to show up and be allowed to
start selling cheap imported wristwatches
on rubber banded styrofoam display cases, and you can
then kiss the Hamvention goodbye. (please someone
tell me these wristwatch-dealers did not show up and
were allowed to set up and sell like they did
someplace in NC last year!)

You oughta see what construction companies go through putting up street lighting or traffic signals - the state inspector is right there taking a sample of the concrete before it is even poured! Specs are there for every bolt and nut. Sure, we get wind, but get some ice on the signals and then get 73 mph winds (like we got earlier this year) and you begin to realize why this isn't a joking matter. Frankly, a small beam and a 35 foot tower might not be all that serious; putting up a BIG antenna or array on an 80 foot tower - I'd hire a commercial firm and expect to pay pretty big money - but I'd sleep well at night.

Or at least English lessons, you Mexican refugee.
^^^^^^^
You as well, wogie, there should be a comma after the word "key"
and the word "or" should not be capitalized. You really should not
post when you are in your drunken stupor.

Cecil:

Axeually, this "pecking order" BS is the NCTA's construct, not
mine. Personally, the last thing I ever want to know about any given
ham is his/her license class. I'm more interested in his/her on-the-
air behavior, technical competence (at the "amateur" level), and
willingness to explore the world of ham radio beyond the local
repeaters and their PTT switch.

Robert Casey wote:

>Now that I'm done bragging :-), the "extra" license is roughly
>equal to say a 6 credit college course. Yes, it's an achievement, but
>not the ultimate achievement.

An extra licence worth 6 credits? I doubt it. In the context of your post, it seems humorous, which is fine. If you actually knew the material, it may be considered 2 (but probably 1, as a course suppliment) credits for all three licence classes. You should know better than that, with all your patents, what college course loads are.

Almost anyone could pass all 3 tests within 2 weeks. This is not worth 6 credits or even worth 1 credit. One or two days to memorize the questions and answers, then take the test, is all that is required.

This is the part where Hans comes in and calls you a "Dump Huck" for not knowing that a bug requires no keyer. Then Ed tells you it's not a modem, either.

Well, my buddy KL0BM used to tell me, "Brian, life is like a $hit sammich, the more bread you got, the less $hit you have to eat." I guess if you've got the money for a big tower and an 80M beam, you've got the money to hire a contractor and to grease the building inspector's palm.
